Dedicated

to

PĀṆINI AND PATAÑJALI

who cast the eternal linguistic mould of India

out of which flow
in unbounded measure
the expressions for
the minutest and vastest
percepts and concepts
which man has or will grasp
in his pursuit of knowledge
of the texture of the universe.

"It is a privilege to be associated, even though only to the extent of writing the Foreword, with the Great English-Indian Dictionary edited by Dr. Raghu Vira.

"The work is a colossal one, both in its conception and execution.

"He has got together a band of enthusiasts to cooperate with him in the work and has succeeded in presenting a monumental work.

"Educationists all over India have agreed that the major obstacle for the spread of the knowledge of modern sciences in the country is the absence of appropriate terminology.

"The Great English Indian Dictionary is an instrument of education which will be of immense assistance in the spread of scientific knowledge in the country.

"Students and teachers of present and future generations will have cause to feel profoundly grateful to the editor of this prodigious compilation."

S. S. Bhatnagar

(Foreword to the Great English-Indian Dictionary, Vol. I, 1944, which is now vastly expanded and incorporated into the present volume).

योे मे अन्नं यो मे रसं
वाचं श्रेष्ठां जिघांसति ।
इन्द्रश्च तस्मा अग्निश्च
अस्त्रं हिंकारमस्यताम् ॥

(अथर्ववेद)

He who designs destruction of my food,
Of my beverage,
And of my noble speech,
O Hail ! Storm ! Thunder ! and Fire !
Roar, hurl your missile,
And smite him.

(*Atharva-Veda*)

Following the long history of modern Indian languages
(which has been so truly affirmed in the Constitution of India)
our terms are drawn primarily from Sanskrit
the classical source-language
of this land.

Our terms are designed to
supply all the scores of derivatives,
compounds and phrases needed by
administration, education, and every other phase of national life.

Sanskrit terms are serviceable, not only in Hindi, but also in Assamese, Bengali, Gujarati, Kannada, Malayalam, Marathi, Nepali, Oriya, Panjabi, Tamil and Telugu. To these we may also add Sinhalese, the major language of Ceylon.

While they will be found useful for Pan-Indian, specific technical or higher purposes,

For local, non-specific, non-technical or popular purposes every Indian language will naturally use local or popular expressions.

"The difficulties of language are not negligible. One's native speech is a closely fitting garment, and one never feels quite at ease when it is not immediately available and has to be replaced by another."

Erwin Schrödinger

Nobel Prize Winner for Physics in 1933

"Modern Eastern students have to be reminded of the creative nature of their languages and to revitalize their terminology.

"They, too, have consciously to revive their abstract and stagnant use of terms by retracing the meanings from the original productive and concrete roots."

Betty Heimann

("*The Significance of Prefixes in Sanskrit Philosophical Terminology*" p.*vi*)

OUR COST

The expenses on the Dictionary include not only those for paper, printing and book-binding but also the salaries of the staff during the last five years. The amount is over four lacs of rupees. If this cost were to be spread over this edition, which consists of four thousand copies, then we should have to price it in a way that after deducting the sales' commission and advertisement charges we may realișe Rs. 100/- per copy. That would mean pricing each copy at near about 150 rupees.

But the Dictionary is intended to serve the people, and hence the price is kept at Rs. 30/- per copy. We hope that the public would appreciate its cheapness and help us in our future work which will continue as long as we do not complete our target of two million terms.

"If I had the powers of a despot, I would today stop the tuition of our boys and girls through a foreign medium,

"And require all the teachers and professors on pain of dismissal to introduce the change forthwith.

"It is an evil that needs a summary remedy."

Mahatma Gandhi

PREFACE

The Divine Being created the forms of the universe, but it is we who give them names and thereby bring them into the orbit of our consciousness. That which remains outside our ken remains unnamed.

सर्वँ वा इदं नाम च रूपं च ।

देवेा रूपाणि चक्रे वयं नामानि कृण्मासि ॥

Hence as we advance the horizon, our terminology must keep pace with it, otherwise our horizon will become dim and hazy. A progressive and creative people have a progressive and a creative language. Daily progress is registered in daily linguistic creation.

India is emerging out of the mediaeval ages. Her languages have been till recently capable of expressing nothing more than mediaeval ideas. Hindi and her sister tongues stand on about the same level. To usher in the new age it is absolutely essential to equip Hindi (and with it the other literary idioms of India) with Indian equivalents for almost every word of the English language that has a bearing on literature and technique. Knowledge has been divided into about 600 special branches. To name only a few: accounts, aeronautics, agriculture, animal husbandry, anatomy, angling, anthropology, architecture, art, astronomy, astrophysics, athletics and sports, aviation, bacteriology, banking, biochemistry, biology, botany, brewing, cartography, ceramics, chemistry, chess, commerce and finance, craniometry, dancing, dentistry, dramaturgy, economics, education, engineering, forestry, gambling, gems and jewelry, geography, geology, history, horology, horticulture, hunting and field sports, insurance, law, logic, machinery and tools, mathematics, medicine, metallurgy, meteorology, mining and ore-dressing, music, nautical and naval terms, newspapers, numismatics, optics, painting, paleontology, paper-making, petrography, petrology, pharmacy, philately, philology and linguistics, philosophy, photography and motion pictures, physics, physiology, politics, printing and engraving, psychology and psychiatry, radio, railways, sculpture, ship-building, sociology, surgery, textiles, transportation (air, land and marine), veterinary science, warfare, zoology.

It has been our design and endeavour to exert ourselves to provide this gigantic mass of technical and semi-technical terms and expressions. All told, the total may exceed two millions. It is a staggering figure.

One might well feel weak and faint, but tackled slowly, steadily and systematically, the task is proving capable of achievement.

We started on the idea in 1931 and the first trial fasciculus was brought forth in 1943. We have worked on one subject after another. We have tackled by now a good many of the foundational subjects and the present volume alone covers one hundred and fifty thousand specific terms and phrases.

* * *

Our sources have been manifold.

On the English side we have used numerous lexicographical works, both general and special. Among the general works one would naturally recount the Oxford English Dictionary in 13 volumes (including the Supplement) and Noah Webster's New International Dictionary of Eng-

lish Language in 2 volumes. The first, which is unrivalled for its historical treatment of each and every word, is superceded by the second by its greater emphasis on modern terms.

The number of special dictionaries is legion. For every branch of learning we have used one or more dictionaries.

On the Indian side we have used all that is available for Sanskrit, Pali, Prakrit and modern Indian languages.. In Sanskrit the ancient Kośas form a dignified array. They have been supplemented by works of 19th and 20th century scholarship, such as the Śabda-kalpa-druma of Rādhākāntadeva in Sanskrit (Calcutta, 1822-58), Sanskrit-Wörterbuch by Otto Böhtlingk and Rudolph Roth in German (published by the Royal Academy of Sciences in Russia, St. Petersburgh, 1855-75), Sanskrit-English Dictionary by M. Monier-Williams (Oxford, 1899), and Buddhist Hybrid Sanskrit Dictionary by Franklin Edgerton (Yale, U. S. A., 1953) in English.

Besides, we had to compile our own English-Sanskrit and English-Pali indexes. Without these we could not have had at our disposal a complete picture of all that is available under a particular English term. The number of cards in these indexes approximates four hundred thousand. It is the biggest collection that has so far been made. We intend to issue this material in the form of two independent works. One would be a Comprehensive English-Sanskrit Dictionary, which will extend over ten volumes, each volume comprising about one thousand pages. It will incorporate the entire recorded material which is inconceivably rich and varied. The second would be an English-Pali Dictionary in one volume of 1500 octavo pages.

For modern Indian languages we have used monolingual and bilingual dictionaries prepared in the 19th and 20th centuries. Some of them are works of great erudition but unfortunately all fall far short of our requirements. Linguistically these dictionaries can be divided into three groups: (a) English to Hindi, (b) Hindi to English, (c) Hindi to Hindi. Similarly for other languages.

There is still another group of dictionaries whose guidance we have occasionally sought. These are bilingual dictionaries of major civilised languages which have technical literature and technical vocabularies. For example, German, French, Dutch, Spanish, Portuguese, Italian and Russian in the West and Arabic, Persian, Chinese and Japanese in the East. We have not ignored smaller languages like Finnish in Europe and Annamese in Asia. Their varying capacities to express new ideas help us on our path.

To the dictionaries we must add yet another category of books without which our formations would have lacked organic life i.e. the capacity to integrate with the context. These are standard books in each domain; and in the case of administration the codes and manuals of each department of the government. In law there are the Codes and numerous Acts which we waded through. Each word, compound and phrase has been provided for in Hindi with due consideration to its associations and surroundings.

Our special lexicons, text-books, codes and manuals still needed experienced men to interpret them, to discuss and to help in the decision of the one or more equivalents that would serve in Hindi and other Indian languages. We have had the cooperation, long or short, of over 200 specialists.

* * *

From 1943 up to 1946 we issued four volumes of the Great English-Indian Dictionary. The first concerned Inorganic Chemistry. The second dealt with Organic Chemistry, and extended up to the letter D. The third was a special volume on Scientific Apparatus. The fourth dealt with Chemical Dyes and Colours, with an Appendix on Intermediate Products. In these volumes each Indian word appeared in four scripts, two of the North and two of the

South viz., Devanāgarī and Bengali, Kannada and Tamil.

During the period 1947-54 we issued a number of special dictionaries—

1. वाणिज्य-शब्दकोष (a Dictionary of Commerce, with special reference to Book-keeping and Accountancy), in collaboration with Shri B. S. Audholia, M.A. and Shri P. L. Baldua, M.A., both Principals of Commerce Colleges at Jabalpur. 1947.

2. सांख्यिकी-शब्दकोष (a Dictionary of Statistical terms) in collaboration with Shri B. S. Audholia, M.A. and Shri P. L. Baldua, M.A. September 1948.

3. *An Elementary English-Indian Dictionary of Scientific Terms*. Prepared for the use of Matriculation students of Indian Universities and High School Boards. The terminology concerns mostly chemistry, physics, mathematics and biology and covers a great part of Intermediate requirements. June 1948 (second edition: March 1950).

4. अर्थशास्त्र-शब्दकोष (a Dictionary of Economics), in collaboration with Shri B. S. Audholia, M.A. and Shri P. L. Baldua, M.A. February 1949.

5. *Terminology of Logic*, in collaboration with Dr. D. G. Londhe, M.A., Ph.D. (Leipzig), Principal, National College, Nagpur. July 1949.

6. *A Dictionary of English-Indian Terms of Administration*, in collaboration with Hon'ble Shri G. S. Gupta. October 1949 (second edition : March 1950).

7. *Indian Scientific Nomenclature of Birds of India, Burma and Ceylon*, giving the names of all the genera, species and subspecies of birds found in India, Pakistan, Burma and Ceylon. In collaboration with Shri K. N. Dave. November 1949.

8. *A Consolidated Great English-Indian Dictionary*, with the collaboration of numerous scientists and scholars, containing about 80,000 terms relating to accounts and administration, agriculture, anatomy, bacteriology, banking, biochemistry, botany, chemistry, civics, commerce and finance, constitution, dyes and colours, economics, education, engineering, insurance, law, mathematics, medicine, mineralogy, newspapers, optics, parasitology, pharmacy, physics, physiology, politics, radio, railway, statistics, zoology, and numerous other science as well as art subjects. 1950 (second edition : 1951, third edition : 1952).

9. *Hindi-English Dictionary of Technical Terms*, being the reverse of the above Consolidated Great English-Indian Dictionary. 1951.

10. *Indian Conventional Signs for Topographical Maps of the Survey of India*, in collaboration with Shri B. G. Tamaskar, M.A. April 1950.

11. खनिज-अभिज्ञान, in collaboration with Prof. N. L. Sharma, Indian School of Mines, Dhanbad; Dr. S. D. Limaye, Ph.D., Poona; and Dr. Lokesh Chandra, M.A., D.Litt. 1953.

12. *Indian Scientific Nomenclature of the Mammals of India, Burma and Ceylon*, in collaboration with Shri K. N. Dave and Dr. Lokesh Chandra, M.A., D.Litt. 1953.

Agricultural Statistics terms were prepared in response to the request of the Department, and were published in the Journal of the Indian Society of Agricultural Statistics, 1948, Vol.I, No.2. Mr. Ramgopal, M.A., had been deputed by the Department as my collaborator.

Early in 1947 I was entrusted with the preparation of terms and text-books on chemistry, mathematics, physics, botany and zoology by the Government of Madhya Pradesh. With the cooperation of the professors, readers and lecturers of the Nagpur University complete terminology up to the B.Sc. and text-books for the Intermediate were produced under my general-editorship. Each book was written in two languages, namely, Hindi and Marathi.* This is

* Here is the complete list—

There is no complete record of the numerous books produced elsewhere which have used our terminology either wholly or partly. They cover not only university subjects but go beyond them.

In 1948 Dr. Rajendra Prasad, then the President of the Constituent Assembly of India, entrusted me along with other friends, with the task of developing the terminology required for the translation of the English text of our Constitution into Hindi and other languages of India. The terminology was discussed and approved by an All-India Committee of Linguistic Experts representing as many as thirteen languages of India recognized by the Constitution, namely, Sanskrit, Tamil, Telugu, Urdu, Kashmiri, Assamese, Gujarati, Hindi, Kannada, Malayalam, Marathi, Oriya and Panjabi. This terminology has already been used in the translations of the Constitution into several of these languages.

I, my collaborators and staff have also worked for complete terminologies of Railway, Food and Agriculture, Parliamentary Practice; and for every Department of the Madhya Pradesh Government.

The ground covered by the present Dictionary may briefly be indicated as follows :

It is a complete compendium for running the administrative machinery. It registers not only single words and compounds but even the oft-used phrases (which are more or less conceptual integers to the administrator). One would find all that one may need for general administration, accounts, finance, budget, auditing, public works, industries, railways, etc., etc. In forestry every plant that grows in the Himalayas, Sundarbans or Nilgiris has received due mention in the Dictionary. The entire Ayurvedic literature has been ransacked to supply the names where they existed, and when nothing existed suitable names have been devised. It is not only the popular English names that have been provided for but the binomial and trinomial systems have been carefully and laboriously worked out.

In law we have aimed at comprehensiveness. There would hardly be a legal term which would not be found here.

In medicine, the Dictionary covers its different branches, from anatomy to pharmacy and bacteriology. A complete volume containing everything medical would have been beyond the scope of the present work. That will appear separately.

In fundamental sciences, algebra, geometry, trigonometry, statics, dynamics, differential and integral calculus, astronomy, inorganic and organic chemistry, bio-chemistry, physical chemistry, physics, botany, zoology, have been dealt with in such fair measure that they will take up the students at the universities far beyond the B.Sc. courses.

Agriculture, commerce, economics, education, engineering, entomology, geography, geology, insurance, irrigation, logic, mechanics, metallurgy, meteorology, mineralogy, mycology, opthalmology, paleontology, politics, psychology, surveying and a host of other branches of learning have been included in the Dictionary.

It is hoped that the Dictionary will serve the largest number of administrators, lawyers, industrialists, scientists and teachers and will be an indispensable instrument in the hands of authors for bringing modern knowledge to the very doors of the masses.

It is essentially a work of cooperation of specialists. The names of most of them are found on the title pages of our dictionaries. Still others appear as co-authors of the text-books listed before.

In conclusion it is my great joy to recall the many benevolent friends who have shared with me the idea and the cause, and have contributed towards its realization. The first great friend was the late Sir N. Gopalaswamy Ayyangar, then the Prime Minister of the State of Jammu and Kashmir. His was the grant that initiated the work in 1942. It was followed by generous donations of Raj Rajendra Lt.-Col. M. N. Shitole of Gwalior. He was followed by Seth Shri Jai Dayalji whose deep love and munificence have

been our constant comrades. It is he who made it possible to produce the present voluminous tome. Hon'ble Pandit Ravi Shankar Shukla, the Chief Minister of Madhya Pradesh, took us out of the blazing fires of 1946-47 Lahore, and established us in Nagpur. Here for the last eight years we have had the assistance of numerous specialists. Here have been produced text-books of science. Again it is here that a fair start has been made in shifting over to Hindi and Marathi as the media of public administration. Shri B. G. Kher, as the Chief Minister of Bombay, made a decent grant towards one of our previous volumes.

My son Dr. Lokesh Chandra has been taking interest in the Dictionary project since the preparation of the first fasciculus in 1943. With every year his interest has been on the increase. From April 1950 he has devoted himself almost entirely to it. Since then he has borne the manifold duties of maintaining the card-indexes, of controlling the work of collaborators and assistants, of getting the press-copy ready and of seeing the different dictionaries through the press. Since 1952 he has participated in the formation of terms as well. All this he has done with cheer and credit. Without his constant devotion to the cause and its execution it would not have been possible to fulfill our plans.

A word to the users of this Dictionary. Kindly note that it is a special dictionary and as such it serves your special needs, in whatever direction they may lie. If however there be items such as you find missing in this volume, please do not hesitate in writing to us. If you find imperfections, as there must be, kindly do point them out to us.

Now Hindi and other Indian languages can stand erect, survey the fields of knowledge, create their own literatures, widen the horizons and raise the stature of the growing and future generations. With this faith we embark the Dictionary, the biggest of its kind in Asia, on its voyage of utility to the Motherland.

INTRODUCTION

Words and thoughts are inseparably connected. New thoughts need new words. Words again can be opaque or transparent. Words can be borrowed from another language or they can be created out of the same language. Borrowed words taken out into a new sphere, even though originally transparent, become opaque, and lose their productivity.

Some languages build extensively, others to a limited extent only. There are others which borrow extensively because they can build only sparingly.

While every language builds to a certain extent, it is only a very small number that build constantly, and not only single stray words but whole systems. These are the three great classical languages of the world. They are coming down from ancient times. They have been cultivated continuously over centuries and milleniums. They are Sanskrit in India, Chinese in the Far East, and Latin (with Greek) in the West. They cover wide expanses of time and space. The languages in Europe, from Icelandish to Russian, depend for their new formations on Latin. In India and South-East Asia Sanskrit is the source. The domain of Chinese is China, Manchuria and Japan.

The history of Sanskrit is long and varied. There are few persons in our country who are capable to survey its field. To begin with, Sanskrit is an all-India language. Its literature is also pan-Indian. It does not belong to any particular locality. Every province has contributed to it. In the North, Panjabi, Hindi and Nepali; in the East, Assamese, Bengali and Oriya; in the West, Sindhi, Gujarati and Marathi; and in the South beyond the shores of India in the jewel island of Ceylon, Singhalese are the grand-daughters of Sanskrit. Or, we might put it the other way—Sanskrit speakers were the forefathers of the present Panjabis, Bengalis and the rest. During the passage of centuries, there was a change and Sanskrit passed through the stages of Pali, Prakrits and Apabhraṃśas to the present day formations. But while changes occurred in daily speech, Sanskrit literature continued to flourish in every area.

Sanskrit had extended even beyond the limits of modern India. Kashmir, Chitral, Swat, Afghanistan, Central Asia and Chinese Turkestan were at one time the centres for the radiation of Sanskrit language and civilisation.

In between Singhalese and Marathi, that is in the region where Dravidian languages now prevail, Sanskrit was cultivated with equal or even greater ardour. Some of our brilliant philosophers and men of letters have come from this area. I may cite here just two names, Śaṅkarācārya and Sāyaṇācārya, the greatest philosopher and Vedist respectively.

Beyond the ocean, in distant Malaya, Sumatra, Java and Borneo, up to the islands of Philippines, sailors and merchants, princes and scholars took Sanskrit with them.*

Pañchaśīla is the designation of the five basic principles of the new Republic of Indonesia. Dvi-varṇa is the designation of their national flag; Garuḍa of their airlines. Personal names, as

* We have recently published a big volume of over four hundred and fifty closely printed pages entitled "Sanskrit in Indonesia", wherein the history of Sanskrit words from Madagascar (near the mainland of Africa) up to Philippines has been treated. We refer the curious readers to this volume.

Soekarno (i. e. सु-कर्ण the virtuous Karṇa who fights on the side of good, as against the Karṇa of Mahābhārata who fought on the side of evil), are further evidence of their Sanskrit background.

In Cambodia, Sanskrit inscriptions have been found from the earliest time of their history up to the 14th century, that is as long as India was able to maintain her foreign relations. Hundreds of lithic documents in the form of royal inscriptions in gorgeous Kāvya style have been discovered and published by two generations of French savants. They stand testimony to the use of Sanskrit as the language of learned men and royal courts for a thousand years and over.

One might look at the Thai Dictionary by George Bradley McFarland and on a single page read उपमा, उपमान, उपमेय, उपयुवराज, उपयोग, उपरि, उपरिचर, उपरिवुद्धि, उपरिभाव, उपरिम, उपसर्ग, उपसम्पदा, उपाध्याय, etc. Under कर्मकार 'a governmental official body' one reads several scores of names of departments, such as कर्म-जलप्रदान Irrigation Department, कर्म-धर्मकार Ecclesiastical Department, कर्म-नगरादर Department of Municipal Affairs, etc. बीजगणित is algebra and त्रिकोणमिति is trigonometry, same as we have in India.

The names of months like Caitra, Vaiśākha, Kārttika, prevailed from Madagascar, up to Philippines. The Śaka era is still used in Bali, Java and Burma. There are thousands of Āyurveda practitioners in Śrī Laṅkā.

The modern languages of North India may be said to have had four to ten centuries of literary activity. During this period they have freely drawn upon Sanskrit. There has been no age at which Sanskrit has not supplied their life-sap. The same is true for Kannada, Telugu and Malayalam. One has only to glance at the big-size dictionaries of these languages and calculate. One finds that out of one lakh of vocabulary entries the Sanskrit element is between 70 to 80 thousand. Even in Tamil which has tried to maintain relative purity of usage and has had less of Sanskrit than the others, the number of Sanskrit vocables is above forty thousand. I may cite from the Tamil Lexicon, published under the authority of the University of Madras, Vol. 6, 1934, p.3872, where almost every word is Sanskrit (sometimes adapted phonetically to the requirements of Tamil). It contains even a word which is new for ordinary Hindi men—जातिमासम्, meaning the calendar month. The page begins with a nāṭya term, जात्तियम् (जात्य), जात्तिरै (यात्रा, through Hindi जात्रा), जातक-कतै (जातक-कथा), जातक-पावम् (जातक-भाव) 'agreement between the horoscopes of the bride and bridegroom', जातकी 'the person whose horoscope is under reference', जाति-त्वेषम्, जाति-तर्मम्, जाति-प्रष्टम् are respectively जाति-द्वेष, जाति-धर्म and जाति-भ्रष्ट. जाति-पुष्पम् is jasmine. जाति-मल्लिकै (जाति-मल्लिका) is the large-flowered jasmine. Then come words connected with caste जाति-लक्षणम्, जाति-लिङ्कम् (जाति-लिङ्गम्), जाति-जीवनम्, जाति-साङ्कर्यम्. जाति-स्वरम् are a class of musical notes.

For higher thoughts and for technical purposes Sanskrit supplies common terms for the languages of the North and the South, the East and the West. Poetry, religion, philosophy, medicine and astronomy are replete with Sanskrit terms.

The recent Constitution of the Republic of Burma has put it down in the form of an article that the advancement and cultivation of Sanskrit and Pali are the concern of the state.

The Constitution of India has also laid it down in unmistakable terms that Sanskrit shall be the primary source for the evolution of Hindi, the official language of the whole of India. Although not mentioned in the Constitution the same is true for other languages as well.

The capacity of Sanskrit as a building language is great. It is as great as that of Latin and Chinese or perhaps even greater, but certainly in no case less.

The technical terminology of modern technique when derived from Sanskrit will bring scientific thought in line with literary thought. The ancient bricks for literature and science shall be the same. The future scientific expressions of India will form an integrated whole with the pre-existing literary ones. In English and other European languages it is not always so.

Our building material consists of three elements (a) verbal roots, (b) suffixes, and (c) prefixes.

In Pāṇini, the greatest codifier of language, the number of verbal roots approximates two thousand. But in use, one hardly finds seven hundred. Out of these we append here a list of about 520. These are the roots which lie at the basis of our vocabularies, old and new. The new one, particularly, does not go beyond them.

Verbal roots are the abstractions of grammarians. They become usable only with the addition of suffixes, one, two or more. Nouns, adjectives, adverbs are derived from roots.

One may wonder as to how it is possible for five hundred roots to serve the variegated patterns of ancient and modern knowledge. Here prefixes come in. When prefixed to roots they give them new directions, and the few hundred roots are multiplied to thousands and lakhs.

At the persistent request of the users of our vocabularies we give here a list of the verbal roots, suffixes and prefixes. This should prove useful for reference. The meanings supplied are the minimum. The examples of derivatives from these roots are also the minimum. While the Indian user, ignorant of Sanskrit, may not be conversant with the verbal roots, he will discover that he knows the derivatives quoted to the extent of eighty to ninety per cent. It is irrespective of the language which may be his mother-tongue. It may be Hindi, Assamese, Gujarati, Bengali, Oriya or Marathi. It may be Kannada, Telugu or Malayalam. It may be even Singhalese. After he has done any one of these languages up to the high school stage he will find that he has done enough by way of ground-work. What follows is only to lead him from the known to the unknown, from words to their roots. As regards prefixes and suffixes, most of these also he has met with in the study of his mother-tongue, such as Bengali or Malayalam. But now he is introduced to these as separate linguistic elements, which would help him in the analysis and understanding of what he has known as well as what he is going to know.

VERBAL ROOTS

The following list contains four items (1) roots, (2) one or two meanings, (3) one or two examples, (4) their common meaning, with occasional reference to a Modern Indian form derived from it. In the examples quoted one would sometimes meet prefixes.

We would request our reader to test his knowledge by going through the examples and noting as to how many he already knows and how many of them are new to him. When he discovers that the vast majority are old acquaintances, he will get new courage to approach and master the present terminology which is based upon them.

The above is a list of primary roots. From them are derived passives, causatives, desideratives and intensives.

Passives are formed by the addition of य.

Causatives, desideratives and intensives also have two forms, one active and the other passive.

Causatives are the commonest class of derivative verbs. They are formed with the suffix अय. Most of the verbs in आ insert प् before अय, e.g. दा to give, दापय to cause to give.

Desideratives are formed by adding to the root, which is reduplicated in a particular way, the suffix स, इष—जिज्ञासा desire to know, जिज्ञासु desirous of knowing; are well-known examples of action and agent desiderative nouns.

Intensives are rare. Here also the root is reduplicated. दंश् 'to bite' has an intensive derivative agent noun दंदशूक 'that which bites intensely, i.e. a serpent'.

SUFFIXES

The use of pure roots is rare. It is by the addition of suffixes that they assume the functions of agent or action nouns, of adjectives or adverbs. Nouns take on still other affixes and

form adjectives. Adjectives form abstract nouns. There are suffixes for denoting comparative and superlative degrees.

I. Primary Suffixes

These are the suffixes that are added on to verbal roots. In the Pāṇinian system they are designated as *Kṛt* (which include the *uṇ-ādis*). Some of them are of wide usage, affixable to *all* roots, while others are of limited application.

A. *Participles*

Declinable participles are often used as adjectives.

1. *Present Tense*

(a) *Parasmaipada*

(1) अत् (अन्त्)

भू—भवत् being.

धृ—धारयत् holding.

Feminine forms end in अन्ती —भवन्ती, धारयन्ती. This suffix is not usually met with in Hindi.

(b) *Ātmanepada*

(2) आन

शी—शयान lying down.

कृ—कुर्वाण doing.

Feminine forms end in आ —शयाना, कुर्वाणा.

(3) In the case of roots of the first, fourth, sixth and tenth classes, as well as of passives, causatives, desideratives and intensives, आन changes to मान.

वृध्—वर्धमान

कृ—क्रियमाण (passive).

Feminine forms end in आ —वर्धमाना, क्रियमाणा.

2. *Past Tense*

(a) *Perfect Parasmaipada*

(4) वस्

कृ—चकृवस् one who has done.

This suffix is not usually met with in Hindi. If used, it will be in the masculine nominative singular form चकृवान्.

(b) *Perfect Ātmanepada*

As before, आन

श्रु—शुश्रुवाण one who has heard (fem. शुश्रुवाणा).

(c) *Passive*

(5) त

त्यज्—त्यक्त abandoned (fem. त्यक्ता).

By rules of sandhi त is changed to ट.

हृष्—हृष्ट horripilated with joy (fem. हृष्टा).

Certain roots add इ before त.

कम्प्—कम्पित shaken (fem. कम्पिता).

त and इत are very commonly used as adjectives and nouns.

(6) न

न is substituted for त, when it immediately follows the द् or ऱ् of the root.

छिद्—छिन्न cut (fem. छिन्ना).

पॄ—पूर्ण filled (fem. पूर्णा).

न occurs in some other cases also.

By sandhi न changes to ण.

निर्+वा—निर्वाण extinguished (fem. निर्वाणा).

(d) *Active*

(7) वत् is added on to the passive forms. In Hindi its masculine nominative form in वान् is used.

त्यज्—त्यक्तवत् (त्यक्तवान्) one that has abandoned.

कम्प्—कम्पितवत् (कम्पितवान्) one that has shaken.

छिद्—छिन्नवत् (छिन्नवान्) one that has cut.

Feminine forms end in वती —त्यक्तवती, कम्पितवती, छिन्नवती.

This participle is of rare use in Hindi.

3. *Future*

(a) *Parasmaipada*

(8) स्यत् (ष्यत्, इष्यत्)

दा—दास्यत् one that will be giving (fem. दास्यन्ती).

जि—जेष्यत् one that will be winning (fem. जेष्यन्ती).

गम्—गमिष्यत् one that will be going (fem. गमिष्यन्ती).

This participle is not used in Hindi.

(b) *Ātmanepada*

(9) स्यमान (ष्यमाण, इष्यमाण)

दास्यमान, विजेष्यमाण, करिष्यमाण (fem. दास्यमाना etc.).

4. *Potential*

(10) तव्य

मुच्—मोक्तव्य what must be freed (fem. मोक्तव्या).

गम्—गन्तृ goer.

(27) त्र

It forms specialised nouns denoting an instrument or means, e.g. दात्र (दो to cut) a sickle, अरित्र (ऋ to move) an oar ('that which moves a boat'), सेक्त्र (ancient word) an instrument for sprinkling water, नेत्र (नी lead) an eye, पत्र (पत् to fly) a feather, खनित्र (खन् to dig) a spade. The very word for instrument ends in -त्र—यन्त्र (यम् to control). It is beautifully explained in the *Samarāṅgaṇasūtradhāra,* an encyclopaedic work by Mahārājādhirāja Śrī Bhojadeva of Dhārā (11th cent. A.D.):

यदृच्छया प्रवृत्तानि भूतानि स्वेन वर्त्मना ।
नियम्यास्मिन् नयति यत् तद् यन्त्रमिति कीर्तितम् ॥ ३ ॥
स्वरसेन प्रवृत्तानि भूतानि स्वमनीषया ।
कृतं यस्माद् यमयति तद्वा यन्त्रमिति स्मृतम् ॥ ४ ॥

"An instrument or machine is so called because it controls, in the manner one desires, the elements which have been moving in an accidental or self-ordained way" (chapter 31 on machines, verses 3, 4).

This suffix has been widely used to formulate names of instruments and machines :

अनुलेखित्र (अनु+लिख् to transcribe) transcribing machine.

आसोत्र (आ+सु to distill) still.

गणित्र (गण् to count) counter.

गन्त्र (गम् to go) engine.

उच्चैस्तराम् higher.

सु-तराम् more-so.

(71) तम denotes the superlative degree.

युव-तम youngest.

उत्-तम highest.

तमाम् forms adverbs.

उच्चैस्तमाम् highest.

सु-तमाम् most-so.

(72) ईयस् is another suffix denoting comparison. According to Pāṇini ईयस् and the following इष्ठ are added to adjectives of quality only (गुणवचनादेव).

लघु—लघीयस् lighter.

महत्—महीयस् greater.

In Hindi the masculine nom. sg. in ईयान् is used —लघीयान्, महीयान्.

(73) इष्ठ

लघु—लघिष्ठ lightest.

महत्—महिष्ठ greatest.

Possessive suffixes मत्, वत्, विन् and agent suffix तृ are dropped before ईयस् and इष्ठ.

मतिमत्—मतीयस्, मतिष्ठ.

मेधाविन्—मेधीयस्, मेधिष्ठ.

कर्तृ—करीयस्, करिष्ठ.

तर and तम are sometimes added to ईयस् and इष्ठ for further accentuation.

पापीयस्तर, पापीयस्तम.

श्रेष्ठतर, श्रेष्ठतम.

D. *Suffixes added to Numerals*

(74) तीय is added to द्वि and त्रि to make ordinals.

द्वि—द्वितीय.

त्रि—तृतीय.

(75) म is added to पञ्च, सप्त, अष्ट, नव, and दश to form ordinals.

पञ्चम, सप्तम, अष्टम, नवम, दशम.

(76) अ forms the finals of numbers between एकादश 'eleven' and पञ्चाशत् 'fifty'.

एकादश eleventh.

द्वादश twelfth.

In Hindi the forms of Sanskrit cardinals and numerals from 10 to 18 will thus be identical.

एकोनविंश 19th (एकोनविंशति 19).

विंश 20th (विंशति 20).

त्रिंश 30th (त्रिंशत् 30).

चत्वारिंश 40th (चत्वारिंशत् 40).

पञ्चाश 50th (पञ्चाशत् 50).

(77) तम forms ordinals from षष्टि '60' onwards.

षष्टितम 60th.

शततम 100th.

सहस्रतम 1000th.

तम is also usable after विंशति, त्रिंशत्, चत्वारिंशत् and पञ्चाशत्—विंशतितम, त्रिंशत्तम, चत्वारिंशत्तम, पञ्चाशत्तम.

(78) कृत्वः forms numerical adverbs, from पञ्च onwards.

पञ्चकृत्वः five times.

शतकृत्वः hundred times.

PREFIXES

Now we come to the prefixes or upasargas. Arranged in alphabetic order the twenty upasargas run as follows— अति। अधि। अनु। अप। अपि। अभि। अव। आ। उद्। उप। दुः। नि। निः। परा। परि। प्र। प्रति। वि। सम्। सु॥ Every school child is familiar with them.

Yāska, the oldest authority on the science of etymology, and the predecessor of Pāṇini, asserts that the prefixes add their specific meanings to the dynamics of the verbal root to which they are attached:

आख्यातमुपगृह्यार्थविशेषमिमे तस्यैव सृजन्तीत्युपसर्गाः।

They are either अर्थ-वाचकाः "independent bearers of meanings", or अर्थ-द्योतकाः "illuminants of the meanings immanent" in the verb. They are even सहकारिणः "cooperants". (See Puṇyarāja's comment on Kārikā 190 of the Vākyapadīya of Bhartṛhari).

Prefixes have been widely used, not only singly but in combinations of two and threes. The recorded combinations are above three hundred and forty. Of these more than one hundred and ten are combinations of three. Combines of four are rare:

संव्यपाश्रित—सं+वि+अप+आ+√श्रि+suffix त.

समभिव्याहरण—सम्+अभि+वि+आ+√हृ+suffix अन.

Even the same prefix is doubled—सु-सु-गन्ध, सु-सु-भिक्ष, प्र-प्र-स्थान, प्र-प्र-जनन, अध्यधिक्षेप, अध्यधीन, उपोपवेशन, अत्यतिक्रम, etc., etc.

Arithmetically all possible combinations of twos would total up to 400, while of threes up to 8000. But in practice we have not found it necessary to go beyond the 340 combinations employed during the four thousand years of literary activity.

How many combinations of upasargas may be used with one single root is illustrated by the root इ 'to go'. Hereunder we quote the 107 single upasargas as well as their combinations with which derivatives of the root इ, like इत, अय, अयन have been used in general language.

अय and अयन are the common action nouns from इ. With them are formed some of the commonest words—अन्वय syntax, उपाय means, न्याय justice, उदय rise, अभिप्राय purpose, व्यय expenses, आय income, पर्याय synonym, पलायन running, प्रत्यय suffix, समय time, agreement, etc. Addition of त forms past passive participles, e.g.—अतीत, व्यतीत, समतीत, अधीत, अन्वित, समन्वित, उदित, प्रेत, प्रतीत, विपरीत, परीत, संप्रतीत.

In the formation of new terms the upasargas have been utilised in due measure. They give direction and distinction. Those who intend to pursue their study would do well to go through the unique monograph of Prof. Betty Heimann—"The Significance of Prefixes in Sanskrit Philosophical Terminology".

उपसर्गेण धात्वर्थो बलादन्यत्र नीयते।
प्रहार-आहार-संहार-विहार-परिहार-वत्॥

Hereunder are given the twenty upasargas, with their chief meanings, followed by a few examples, all from ancient literature.

Upasargas are used with verbs, nouns and their derivatives.

Upasargas can be used singly, or in twos, threes and even fours.

Collocations of upasargas, with at least one example, are put under the first member of the collocation.

A rough approximation of the occurrence of each upasarga is given in figures enclosed within brackets.

14 सु-वि-नि ...सुविन्यस्त.
15 सु-वि-निः ...सुविनिर्मल, सुविनिश्चय.
16 सु-वि-अव ...सुव्यवस्थित.
17 सु-वि-आ ...सुव्याख्यात, सुव्याहृत.
18 सु-सम् ...सुसंयत, सुसंयुक्त, सुसंरब्ध.
19 सु-सम्-नि ...सुसंनिपातित.
20 सु-सम्-आ ...सुसमाकृत, सुसमारब्ध, सुसमाश्रित.
21 सु-सम्-प्र ...सुसम्प्रतप्त, सुसम्प्रस्थित, सुसम्प्रहृष्ट.
22 सु-सु ...सुसुगन्ध, सुसुभिक्ष, सुसुतम.
23 सु-अधि ...स्वधिष्ठान, स्वधीत.
24 सु-अधि-अव ...स्वध्यवसान.
25 सु-अनु ...स्वनुगुप्त, स्वनुजा, स्वनुरक्त.
26 सु-अप ...स्वपराद्ध.
27 सु-अपि ...स्वपिवात.
28 सु-अभि ...स्वभिराम, स्वभ्यक्त, स्वभ्यग्र.
29 सु-अव ...स्ववक्लिन्न, स्ववग्रह, स्ववच्छन्न.
30 सु-आ ...स्वाकार, स्वाख्यात, स्वागत.

Prefixes (20), roots (about 520) and suffixes (about 80), when conjoined, are capable of forming millions of words. It is clear that we shall never run short of words. Even to deal with a single root in all its variety would cover a volume. From existing literature alone one could compile a few hundred pages of material dealing with the ramifications of a general root like कृ.

Here we shall content ourselves by presenting just one common root गम् to go. Life centres round movement and it is but natural, that our ancients who named the world *samsāra, jagat,* which mean 'the ever-moving', should have utilised the idea of movement to include a large number of aspects and things of life.

The direct derivatives of गम् are : गत gone, departed, situated in, contained in, relating to, frequented. गतक. गति movement, gait, passage, course, resource, condition. गतिक, गतिला, गत्वन्. गत्वर transient, perishable. गन्तव्य to be attained, to be undergone, to be approached. गन्तु a way, wayfarer. गन्त्रिका a small cart. गम march, decampment, (in mathematics) removal of fractions. गमक indicative, explanatory. गमथ a road. गमन departure. गमनिका explanatory paraphrase. गमनीय accessible, approachable. गमयितृ leading to. गमित sent, brought. गमिन् intending to go. गमिष्ठ most ready to go. गमिष्णु intending to depart. गम्य passable, attainable, dissolute. गम्यमान, गमिक. गामुक and गामिन् reaching or extending to, directed towards, etc., etc.

Many of these forms are found used with prefixes which often modify the meaning. We shall take a few here:

अतिगम् to surpass, to overcome, to neglect. अतिग exceeding, transgressing, violating.

अधिगम् to find, to obtain, to accomplish, to study. अधिगत acquired, learnt. अधिगन्तव्य, अधिगन्तृ. अधिगम mastery, study, knowledge, profit. अधिगमन, अधिगमनीय, अधिगम्य.

अनुगम् to follow, to seek, to observe, to imitate. अनुग a follower, a servant. अनुगत tallying with. अनुगति imitation. अनुगतिक, अनुगन्तव्य, अनुगम. अनुगमन post-cremation of a widow. अनुगम्य, अनुगामिन्, अनुगामुक.

अपगम् to depart, to vanish. अपग turning away. अपगत gone away, remote, dead. अपगम, अपगमन.

अपिगम् to enter, to join.

अभिगम् to undertake, to approach, to obtain. अभिगत, अभिगन्तृ, अभिगमन, अभिगम्य, अभिगामिन्.

अवगम् to descend, to obtain, to understand, to conceal. अवगत, अवगति anticipating. अवगन्तव्य, अवगम. अवगमक expressive of. अवगमन, अवगमयितृ, अवगम्य.

आगम् to come, to meet with, to arrive. आगत. आगति arrival, origin. आगन्तव्य. आगन्तु adventitious, incidental. आगन्तुक a stranger, a guest. आगम arrival, appearance, income, science. आगमन, आगमिन्. आगमिष्ठ approaching with rapidity. आगामिक relating to the future. आगामिन् impending. आगामुक. आजिगमिषु intending to come.

उद्गम् to come forth, to rise, to ascend. उद्गत, उद्गति. उद्गम origin, shooting forth. उद्गमन, उद्गमनीय.

उपगम् to go near, to visit, to attend, to admit. उपगत approximate. उपगति, उपगम, उपगमन, उपगम्य, उपगामिन्, उपजिगमिषु.

दुर्गम difficult to be traversed, impassable, inaccessible. दुर्गमनीय, दुर्गम्य.

निगम् to enter, to undergo, to insert. निगम doctrine, a market-place, a caravan. निगमन.

निर्गम् to go out, to disappear. निर्गत disappeared, extinct. निर्गम vanishing, exit, outlet, export. निर्गमन outlet, issue.

परागम् to go away. परागत, परागन्तृ, परागम.

परिगम् to go round, or about or through, to surround. परिगत encompassed, experienced. परिगन्तव्य, परिगमन, परिगमित, परिगम्य.

प्रगम् to go forward, to proceed, to advance. प्रगत, प्रगति. प्रगम first advance in courtship. प्रगमन progress, प्रगमनीय, प्रगामन्, प्रगामिन्. प्रगे early in the morning.

प्रतिगम् to go towards, to go back. प्रतिगत, प्रतिगति, प्रतिगमन.

विगम् to go asunder, to separate. विगत, विगम.

संगम् to go together, to join, to harmonize, to correspond, to assemble. संग coming together. संगत in conjunction, alliance. संगति association, company, appropriateness, relation. संगथ meeting place. संगम confluence, harmony, point of intersection. संगमक, संगमन, संगमनीय, संगमिन्, संगिन्.

सुगम easy of access, easily understood. सुगत, सुगति, etc., etc.

So far we have given only single prefixes with the simplest form of derivatives. There are still bunches of twos and threes which add to the richness of the language without burdening the memory. We cite the combinations without either the actual forms or their specific connotations—अन्वागम्। अभिनिर्गम्। अभिसंगम्। अभिसमागम्। अभ्यागम्। अभ्युपागम्। अभ्युद्गम्। अभ्युपगम्। उपनिगम्। उपसंगम्। न्यागम्। पर्यागम्। प्रत्यवगम्। प्रत्यागम्। प्रत्युद्गम्। प्रविगम्। प्रोद्गम्। विनिर्गम्। विप्रगम्। संनिगम्। समधिगम्। समनुगम्। समन्वागम्। समभिगम्। समभ्यागम्। समवगम्। समागम्। समुदागम्। समुद्गम्। समुपगम्। समुपागम्। सम्प्रत्यागम् ॥

GENERAL PRINCIPLES OF INDIAN TERMINOLOGY

1. *One word conveys only one primary meaning.*

For every primary meaning there is a separate word.

2. *Words are* अन्वर्थ *significant.*

They lead in the direction in which the thing or idea denoted lies; they point to some salient feature.

They may even be founded on the basis of an exclusive characteristic.

3. *Simple English words are translated by simple words and not by compounds or phrases.*

Where this principle is transgressed the reason is a greater or more immediate grasp. For example budget is translated by आय-व्ययक, and gazette by राज-पत्र.

This principle establishes the distinction between a term and a definition.

4. *The length of a simple uncompounded word is kept strictly within bounds. Two and three syllables form the norm; four is the limit.*

Two, three or four syllables include the prefix, root and suffix. प्रजा is composed of the upasarga प्र, root जन् and suffix आ. विधान 'legislation' is composed of upasarga वि, root धा and suffix अन.

The limit is crossed only in unavoidable cases, such as ancient words and derivatives. Scientific colour names incorporate within themselves the complete definition in terms of hue, saturation and brilliance.

If one would glance at the English words and their Indian counterparts in the Dictionary, one would find that the graphic units in the simple Indian words are restricted to four, while those in English may be many more. As a rule Indian words do not occupy more space than corresponding English words.

If an idea is new, persons are likely to express it by a phrase, but the phrase cannot be used as a term. It is different in Chinese.

अग्निरथ-गमन-आगमन-सूचक-लोहपट्टिका may be a picturesque description of 'signal' but cannot be said to be a term. Our term is simple संकेत. It is not equally picturous but it is far more handy.

5. *Distinctive prefixes and suffixes of a particular branch of knowledge are normally to be translated by corresponding prefixes and suffixes.*

For example :

परि	for	peri...	peri-meter परि-माप
अनु	for	sub ...	sub-genus अनु-प्रजाति
सं	for	con ...	con-dense सं-घनन
अप	for	ab ...	ab-rade अप-घर्षण
प्रति	for	anti...	anti-mere प्रति-खण्ड
सु	for	eu ...	eu-pepsia सु-पचन
दुस्	for	dys ...	dys-pnea दुः-श्वसन etc. etc.

(Historically Greek *dys* and Indian दुस् are the same).

Let us now take suffixes. The main word is sometimes abbreviated; as in chemistry. Phosphorus is abridged to phosph, and to it are added one or more suffixes —ate, at-ed, at-ic, at-ide, at-ion, ide, in, in-ic, on-ic, etc.

Phosphorus is भास्वर, and phosph भास्व. Ate is ईय, ed इत, ic इक, ide एय, ion अन, in इ and on आ. Hence, phosphate भास्वीय, phosphated भास्वीयित, phosphatic भास्वीयिक, phosphatide भास्वीयेय, phosphation भास्वीयन, phosphide भास्वेय, phosphin भास्वि, phosphinic भास्वियिक, phosphonic भास्वायिक (य serves as the glide between two vowels).

6. *When the English word is a significant compound and duly conveys its technical significance, the Indian word is similarly formed.*

For example, centrifugal and centripetal signify 'running away from and towards the centre' respectively. The component parts of the Indian words are केन्द्र+अपग (ग going अप away) and केन्द्र+अभिग (ग going अभि towards).

Similarly, tetramerous is चतुरवयव (tetra चतुर् + merous अवयव). In organic chemistry a compound may run over great lengths and may be composed of five, six or more elements. That is no longer within the range of ordinary language. It is the specialist's jargon. In such cases our words have of necessity to follow the specialist's needs. In our system there is no difficulty in translating these compounds, whatever length they may have. Translation proceeds smoothly and precisely, word by word, abbreviation by abbreviation, number by number.

7. *If a term in English has a number of distinctive derivatives, all of them are provided for.*

For example :

law विधि
lawful विधिवत्, विधिसंगत
legal वैध
illegal अवैध
legislation विधान
legislative विधायी
legislator विधायक
legislatable विधेय
illegislatable अविधेय
lawless विधिहीन
lawlessness विधिहीनता

8. *Where needed a word is allowed one or more abridged forms.*

Provision is thus made for all the required combinations which a highly developed science like mathematics, physics or chemistry demands.

Oxygen is जारक (जारक is based on the ancient term जारण which has been used in ancient alchemical literature for oxidization).

In English *oxygen* is abbreviated to *oxy*, as in *oxy-hydrogen*, *oxy-ketone*, *oxy-purine*. It has also another abbreviation *ox*, as in *ox-amide*. *Oxa* denotes the presence of oxygen replacing carbon, especially in a ring. *Oxo* is also to be distinguished from *oxy*.

जारक is abbreviated to जार for *oxy* and जा for *ox*. जारक is formed from root जृ which has a guṇa form जर. Both जृ and जर have been used for *oxa* and *oxo* respectively.

In chemistry the symbols for all the 92 elements (or including those made up in the laboratory, 98) have to be distinct. Hence, every Indian element name begins with a distinct syllable.

9. *No word is considered and translated individually. It is taken along with its grammatical derivatives (such as nouns, verbs, adjectives). Semantically it is considered along with its synonyms and antonyms.*

Examples of grammatical derivatives are—

1. aurum स्वर्ण
   auric स्वर्णिक
   aurous स्वर्ण्य
2. absorb प्रचूषण
   absorbency प्रचूषत्व

absorbed प्रचूषित
absorber प्रचूषक
absorptive प्रचूषी

3. acid अम्ल
acidic अम्लिक
acidiant अम्लकर
acidification अम्लन
acidifier अम्लक

Examples of semantic correlates are—

1. adductor muscle उपचालक पेशी
abductor muscle अपचालक पेशी
2. afferent अभिवाही
efferent अपवाही
3. superintendent अधीक्षक
inspector निरीक्षक
4. motion प्रस्ताव
resolution संकल्प
bill विधेयक
act अधिनियम
5. revolution क्रान्ति
mutiny सैन्यद्रोह
rebellion विद्रोह
6. right अधिकार
authority प्राधिकार
prerogative परमाधिकार
privilege विशेषाधिकार

10. *In case of ideas and objects that have existed from ancient times, old names are assiduously hunted out from the vast range of Sanskrit, Pali and Prakrit literatures. Modern Indian languages are also consulted.*

Thus we maintain a historical continuity between the past and the present. We have laboured for long years in this domain. Our special success has been in the names of flowers and plants, birds and mammals. As noted before, most of this material will appear in our forthcoming English-Sanskrit and English-Pali Dictionaries. Here we have been able to utilise only a fraction.

11. *For new ideas new suffixes have been devised.*

They originate in genuine words, whose first part is clipped off, allowing only one or two syllables to remain. Of the two syllables, the first is usually a vowel which coalesces naturally with a preceding vowel and constitutes a well-knit whole. Thus in chemistry:

-आतु is abridged from धातु 'metal'. It is used as a suffix in forming the names of metals. It is the counterpart of English *-ium, -um*.

-आति is abridged from वाति 'gas'. It is used as a suffix in forming the names of gases. It is the counterpart of English *-on*.

-ला is abridged from विरला (मृद्) 'rare (earth)'. It is used as a suffix in forming the names of rare earth metals (atomic nos. 39, 57-60, 62, 64-71).

In mineralogy -इज is abridged from खनिज 'mineral'. It is used as a suffix in forming the names of minerals. Cf. English *-ite* (abridged from *-lite*, which is equivalent to *-lith*, from French *lithe*, from Greek *lithos* stone).

This clipping system obtains all over the world, from English to Chinese.

We have resorted to the creation of new suffixes only in cases of pressing requirement of a science. All told that would not exceed a dozen.

12. *Phonetically every word is designed to fit in with the Indian genius. Harsh sounds and awkward consonant combinations are avoided.*

13. *Our words are usable in Hindi and most other languages of the North, South, East and West of India.*

The overwhelming majority of the terms in this Dictionary will help in simultaneous development of Indian languages as a whole. Only for non-technical and popular purposes would there be different terms in each region.

14. *Technical terms are a supplement to the general dictionary.*

While the technical dictionary adds to the existing language and in a technical way modifies it, all the same it does not replace the words of the general language. The higher one ascends, the more one uses special terms. But in every day speech and writing the common language will continue more or less as it is today.

Special Terminologies

CONSTITUTION, LAW, ADMINISTRATION, ECONOMICS & POLITICS

The general principles that have been outlined in the preceding section have been followed faithfully in devising the terminology of social and natural sciences.

In constitution, law and administration our task has been twofold, (a) the sifting of existing material, (b) the provision of new material.

We have tried to retain as much as possible of the older material; but it is has not been possible always. The main reason is that the present system of government is vastly different from what existed before. It is different from the Vedic, Buddhist, Gupta or Mughal days. The very conceptions lying under the present system are new. The distinctions that today exist between tax कर and cess उपकर, law विधि and act अधिनियम, attorney प्राभिकर्ता and agent अभिकर्ता, right अधिकार and authority प्राधिकार, privilege विशेषाधिकार and prerogative परमाधिकार, invention उपज्ञा and discovery आविष्कार, legislation विधान and constitution संविधान have been maintained by using distinct terms.

An example of terms denoting official hierarchy is the series composed of grades of secretaries—

Secretary सचिव
- additional secretary अपर सचिव
- deputy secretary प्रति-सचिव
- under secretary अवर सचिव, उप-सचिव
- chief secretary मुख्य सचिव
- joint secretary संयुक्त सचिव
- assistant secretary सहायक सचिव
- extra-secretary अतिरिक्त सचिव

Oft-used phrases have been freely incorporated into the Dictionary. It is hoped that they will be a great help.

Accounts and book-keeping form an important part of administration. Some of the basic words are given hereunder as example :

bank अधिकोष
- commercial bank वाणिज्य-अधिकोष
- co-operative bank सहकारी अधिकोष
- exchange bank विनिमय-अधिकोष
- industrial bank औद्योगिक अधिकोष
- savings bank संचय-अधिकोष
- bankable अधिकोषणीय
- banker अधिकोष-पति, आधिकौषिक
- banking अधिकोषण, अधिकोष-व्यापार
- banking account अधिकोषण-लेखा
- banking advisor अधिकोषण-मन्त्रणाकार

register *n.* पञ्जी
- register *vb.* पञ्जीयन, पञ्जीबद्ध करना, निबन्धन
- registered पञ्जीयित, पञ्जीबद्ध, निबद्ध
- registration पञ्जीयन, पञ्जीबन्धन, निबन्धन
- registration and cataloguing पञ्जीयन और सूची बनाना
- registration and despatch पञ्जीयन और भेजना
- registration authorities पञ्जीयन-प्राधिकारी
- registration card पञ्जीयन-पत्रक
- registration centre पञ्जीयन-केन्द्र
- registration certificate पञ्जीयन-प्रमाणपत्र
- registration circle पञ्जीयन-वृत्त
- registration clerk पञ्जीयन-लिपिक
- registration counter पञ्जीयन-स्थान
- registration department पञ्जीयन-विभाग
- registration envelope पञ्जीयन-वेष्टन
- registration fees पञ्जीयन-शुल्क
- registration ink पञ्जीयन-मसी
- registration law and procedure पञ्जीयन विधि और प्रक्रिया
- Registration Manual पञ्जीयन-नियमावलि
- registration mark पञ्जीयन-चिह्न

Examples for terms relating to constitution, law, administration, economics, politics and allied branches would be found to be mostly transparent.

LOGIC

Logic is the science that deals with the canons and criteria of validity in thought and demonstration; the science of the normative formal principles of reasoning.

Traditionally, Western logic comprises (1) the "doctrine of terms", the principles of definition, classification and the correct use of terms; (2) the "doctrine of the judgment", or principles of correct predication; (3) the "doctrine of inference", covering reasoning or demonstration proper.

Logicians are divided in their conceptions of the content and significance of logic.

Logic as taught today in our universities mainly represents—

(1) Aristotelian logic, derived from Aristotle and the Stoics and followed by most other European logicians until at least the time of Hegel. This logic is most authoritatively set forth in the Port Royal Logic. It is principally concerned with deduction. For induction we have to go to J. S. Mill.

(2) Modern or epistemological logic derived from Hegel. It is perhaps best represented in its current form by Bosanquet. It conceives all truth to be organically related and tested by its coherence, so that nothing short of the whole of the truth can be wholly true. Conceptions and principles are inadequate in proportion as they are abstract, and a correct canon of right thinking cannot be formal.

(3) Pragmatic, instrumental, or experimental logic, of John Dewey and his followers. It emphasizes thinking as an activity whereby the individual adapts himself to the environment, and the art of thinking which logic treats as concerned principally with this instrumental value of thought. It largely ignores formal principles.

(4) Symbolic or mathematical logic, which is a mode of developing and representing logical principles through the use of symbols for classes, propositions etc., rather than a theory of logic.

Psychological logic or psychologism, represents a movement, confined to Germany. It would substitute psychological and descriptive laws of thought for the usual normative principles.

Ancient Indian logic represents a different world altogether. It is not possible to cover European conceptions by the terms of Nyāya, Vaiśeṣika, Vedānta or Jains and Buddhists. A new set of terms has to be evolved.

There are, however, a number of ancient terms which have been brought into service, such as,

तर्क, युक्ति, हेतु, कारण, कार्य, कारणता, कारणत्व, कार्य-कारण-सम्बन्ध, निमित्त-कारण, समवायि-कारण, अन्वय, व्यतिरेक, पदार्थ, द्रव्य, अतिव्याप्त, अव्याप्त, पुनरुक्ति, अवच्छेदक, साध्य, पक्ष, व्याघात, निरुपाधिक, सोपाधिक, सामान्य, विशेष, विकल्प, वाद, अवयव, विशेषण, विशेषक, अपवाद, अनुमान, व्यवहित, अव्यवहित, विपर्यय, तादात्म्य, विलोम-सम्बन्ध, विभावना.

काकतालीय is the Indian counterpart of *post hoc, ergo propter hoc.*

"Fallacy" is Latin *fallacia* from *fallax* meaning "deceptive or false appearance". Ancient आभास is "semblance, mere appearance, fallacious appearance" (वेदान्तसार). हेत्वाभास is just one type of आभास. There are others, e. g., तर्काभास, प्रमाणाभास, न्यायाभास (हेत्वाभास इत्यादौ हेतुदोषः। अत्र हेतावाभासत इति व्युत्पत्त्या आभासपदं हेतुनिष्ठदोषपरमिति ज्ञेयम्)

Biologically species is जाति—समान-प्रसवा जातिः "that which brings forth प्रसव its like समान".

For deduction, निगमन has been used for some time past. We have accepted it, नि "down", गमन "going", *i.e.* inferring the particular from the general (सामान्याद् विशेषस्य अनुमानम्). It is the fifth member in the system of the Naiyāyikas (प्रतिज्ञा, हेतु, उदाहरण, उपनय, निगमन. "निगमन is the summing up of an argument or conclusion in a syllogism; deduction" M. Monier-Williams). निगमन "deduction" has its natural counterpart in उद्गमन "induction", inferring the general from the particular (विशेषात् सामान्यस्य अनुमानम्).

वाक्य in ancient logic is used for "member of a syllogism" or "syllogism" itself. For "member of a syllogism" अवयव has found wide acceptance. It has the backing of न्यायदर्शन. For "syllogism" we have prefixed सं to वाक्य; सं corresponding to *syl-* the *sandhi* form of *syn-* "with" in *syl-logism.* वाक्य by itself would be "sentence". तर्क-वाक्य can be an alternative.

For *equivocation* the ancient term is वाक्छलम्—अविशेषाभिहितेऽर्थे वक्तुरभिप्रायाद् अर्थान्तरकल्पना वाक्छलम् (न्यायदर्शने १।२।१२)। नवकम्बलोऽयं माणवक इति प्रयोगः। अत्र नवः कम्बलोऽस्य इति वक्तुरभिप्रायः। विग्रहे तु विशेषो न समासे। तत्रायं छलवादी वक्तुरभिप्रायाद् अविवक्षितम् अन्यम् अर्थं नव कम्बला अस्येति तावद् अभिहितं भवता इति कल्पयति। कल्पयित्वा चासंभवेन प्रतिषेधति एको-

ऽस्य कम्बलः कुतो नव कम्बला इति । तदिदं सामान्यशब्दे वाचि छलं वाक्छलमिति (वात्स्यायनकृते गौतमसूत्रभाष्ये १।२।१२).

In point of clarity the Indian terms would be found to be superior to English. To take a typical set—(1) logical division (2) physical partition (3) metaphysical analysis. Here the first is the division of genus into species जाति— जाति-विभाजन; the second is the division of an object into its parts, as of a tree into roots, branches, etc.—अवयव-विभाजन; the third is the division of a substance into qualities, as of sugar into sweetness, whiteness, etc. —गुण-विभाजन.

Distinction and close relation have been maintained between terms of similar significance—

figure (of a syllogism)	प्रकार
modus	प्रकारक
mood	उपप्रकार

अस्ति, present tense, third person, singular form of root अस् "to be, to exist", has been used in compounds in ancient literature with great effect—

अस्ति इति तिङन्तक्रियावचन-प्रतिरूपको निपातः। अस्तिशब्दश्चार्य निपातस् त्रिकालविषयः। यदाह शाकटायनः न्यासकृत्—अस्तीति निपातः सर्वलिङ्गवचनेष्विति—इत्यभिधानराजेन्द्रे ॥

अस्ति-काय, an ontological category among the Jains, of which five are distinguished, viz., जीवास्ति-काय, अजीवास्ति-काय, धर्मास्ति-काय, अधर्मास्ति-काय, पुद्गलास्ति-काय.

अस्ति-क्षीरा is "one having milk" (काशिका on पाणिनि २।२।२४ सुबधिकारेऽस्तिक्षीरादीनां बहुव्रीहिर्वक्तव्यः).

अस्तिता, अस्तित्व "existence, reality" (सर्वदर्शनसंग्रह, etc.).

अस्ति-नास्ति "partly true, partly not, doubtful".

अस्ति-प्रवाद, अस्ति-नास्ति-प्रवाद—name of the fourth of the fourteen older writings of the Jains.

अत्थि-भाव (Skt. अस्ति-भाव) "state of being, existence, being" is widely current in Pali books (Jātaka I. 222, 290; II.415; etc.)—अत्थि-भाव वा नत्थि-भाव वा "whether there is or not".

अस्तिमत् "possessed of property, those who have, the haves" (correspondingly we can use नास्तिमत् "have-not", and in plural, "haves and havesnot" अस्तिमन्तो नास्तिमन्तः).

आस्तेय "belonging to something existent"—पाणिनि ४।३।५६ दृति-कुक्षि-कलशि-वस्ति-अस्ति-अहेर् ढञ् ॥

Alongside अस्ति- we have नास्ति- —नास्तिता, नास्तित्व "nonexistence" (शंकराचार्य), नास्ति-मूर्ति "incorporeal" (नैषधचरित), नास्ति-वाद "atheism" (हरिवंश, etc.).

नास्तिक "an atheist", आस्तिक "a believer" are well-known.

From अस्मि are similarly derived अस्मिता, अस्मि-मान.

From स्यात् is derived स्याद्-वाद, स्याद्-वादिक, स्याद्-वादिन् (स्याद् इत्यव्ययं तिङन्तप्रतिरूपकं कथंचिदर्थकम् । स्याद्स्ति कथंचिद्स्ति इत्यर्थः—शारीरकभाष्यटीकायाम् २।२।३३).

From अस्तु, कात्यायन (अस्तु-सत्य-अगदस्य कार इति वक्तव्यम् on पाणिनि ६।३।७०) derives अस्तुंकार "one who says अस्तु, conceding, assenting unwillingly, or ordering".

अस्तु-विद् "knowing that anything must be done" (कल्हण-कृता राजतरंगिणी).

Thus the use of अस्ति, नास्ति and other verbal forms as nouns which enter into compounds, and which take *taddhita* suffixes, is well authenticated by grammarians, philosophers and literati (cf. काशिका ४।३।५६ आस्तेयम् । अस्ति-शब्दः प्रातिपदिकं न तिङन्तः)

Hence for *affirmative* we have अस्ति-वाची, for *negative* नास्ति-वाची. *Universal affirmative* is सामान्य अस्तिवाची, *particular affirmative* विशेष अस्तिवाची.

A, the first letter of Latin *affirmo*, denoting a universal affirmative, has its counterpart in our अ, the initial of अस्ति-वाची. E, the first vowel of Latin *nego*, denoting a universal negative, is translated by our न, the initial of नास्ति-वाची. अ and न, standing for universal affirmative and negative respectively, आ and ना have been used to serve for particular affirmative and negative.

Three more abbreviations may be noted here—

S (subject)	उ	(उद्देश्य)
P (predicate)	वि	(विधेय)
M (middle)	म	(मध्य)

There are numerous Latin phrases, sentences and maxims in Western logic. Usually it has been possible to translate them by words, juxtaposed to form compounds, usable in Hindi, Marathi or any other Indian language, either as standing alone or as part of a sentence. There, however, remain a few of them, where compounds cannot serve the purpose, for the relationship of one word with another has to be exhibited by the proper case-ending, or if it is a complete sentence, with its subject, object, and finite verb, all with or without adjuncts. In such cases we have resorted to Sanskrit, as India's superfine medium of expressing laws and maxims in the clearest and the most compact form. They will be common to Hindi, Marathi and other languages of India. If, however, need be felt, they are simple enough to be translated further into the mother-tongue of the student. It is only the Sanskrit case-endings which have to be replaced, the words shall remain

the same, *e. g. Causa latet, vis est notissima* कारणम् अदृश्यं, दृश्यं कार्यम्.

SCIENTIFIC SYMBOLOGY

Formulas are made up of, in great measure, signs and symbols. They represent a vocal and graphic economy which was unthinkable two centuries ago. They are abstractions representing the top of the flight of steps on one's ascension in a particular domain. They condense knowledge.

Formulas may be constitutional, configurational or stereometric, electronic, mathematical, etc. There is hardly any science which does not make use of formulas. They are the modern counterparts of ancient *sūtras*, expressing a general fact, a rule or principle, a statement covering complexities of facts and situations, a brief expression of a single concept or again, as in chemistry, the composition of a substance.

Signs and symbols are the bricks of a formula. They may be classified as hereunder:—

Signs and Symbols

- Alphabetic
  - monoliteral, polyliteral
  - monosyllabic, polysyllabic
  - initials, syncopates
    - arbitrary, abbreviational, quasinumerical
- Non-alphabetic
  - geometrical, diagrammatic
  - picturesque
  - arbitrary, conventional

A, b, c, d and *alpha, beta, gamma* are alphabetic symbols, the first set derived from Roman and the second from Greek. They can be used as capitals, smalls and italics. They may be used singly or in combinations. They may be the initials of full words as in chemistry, physics and elsewhere. They may as well represent the number which they occupy in their respective alphabets, as in astronomy, where the magnitude of stars is expressed by the letters of the Greek alphabet instead of the usual numbers 1, 2, 3, *alpha* standing for 1, *beta* for 2 and so on.

Then there are non-alphabetic symbols. They are not as many as the alphabetic ones, but they are important and are frequently met with. In mathematics alone, there are a few dozens of them comprising dots, dashes, accents, circles, half-circles, triangles, squares, rectangles, parallelograms, right angles, perpendiculars, parallels, arbitrary signs for infinity, equal to, equiangular to, parallel to, plus, minus, multiplied by, divided by, is contradictory of, is greater than, is less than, is not less than, is not greater than, is congruent to, is identical with, is similarly ordered, therefore, of the form of, is divisible by, varies directly as, is proportional to, the ratio of, geometric proportion, the root sign, etc., etc.

Alphabetic and non-alphabetic symbols are combined. $||^{gm}$ for parallelogram is a diagrammatico-alphabetic symbol.

When one considers the transmission of knowledge from one language to another, it is not the diagrammatic symbols that concern the transmitter of knowledge, for they remain the same, but the alphabetic symbols. They concern the script and the language directly and inseparably.

The English script is the Roman script and the Roman is in its turn derived from Greek and retains great affinity to it. Latin and Greek are also the classical languages wherefrom English derives its sustenance in matters of literary and scientific expression. We, on the other hand, have our own scripts the Devanagari,

Bengali, Tamil, etc. which are derivatives of the Ashokan Brahmi.

The Indian scripts follow a different pattern and they are equally inseparably associated in the Indian consciousness with Indian languages. Both our public and printers find it convenient to use our letters of the alphabet in the body of our own language texts. Nothing else can be practical either.

English alphabetic symbols lead on to English words, whether hypertechnical, technical, semitechnical, or even non-technical. These cannot be absorbed without absorbing English words. One might cite such symbols from English as *Ag* for silver, *Au* for gold, and argue that a symbol is just a symbol and need not be intelligible. On examination, it will be found that no student of science is ignorant of the original words *argentum* and *aurum*. Those who use *Ag* and *Au* also use argentic, argentous, auric, aurous, etc., etc. While there may be here and there an occasional symbol which has lost its connection with the original word in the memory of the users, there are against it hundreds which are abbreviations of current words. Symbols being abbreviations, it becomes impossible to borrow them from English into our languages. Moreover unlike our scripts English words are graphically based on spellings and not on pronunciation (the two playing a game of hide and seek).

To give a few examples: *h* stands for *h*our, *r* for *r*adius, *f* for *f*unction, *M* for *m*odulus of a system of logarithm, *c.g.* stands for *c*entre of *g*ravity. One letter may stand and does actually stand for many words, e.g., *c* (sometimes capital) stands for carbon, chemical constant, concentration, Curie's constant (in physical chemistry), coulomb, canine teeth, capacity (in electricity), cathode, cent, centre, centime, centigrade, centimeter, centum, cervical, cubic (in volumetry), etc., etc.

According to the principle of virtual displacement,

$$F_1 = m_1g + R_1 + T$$

$$F_2 = m_2g + R_2 + T$$

$$\text{and } (m_1g+R_1+T)\,dr_1 + (m_2g + R_2 + T)\,dr_2 = 0$$

Here m stands for mass,

F for force,

g for gravitational constant,

R for reaction,

T for tension,

d in dr for displacement,

and r in dr for radius vector.

Let us take some simpler formulae—

(a) W = mg

Here W stands for weight, m for mass and g for gravitational constant.

(b) momentum = *mv*,

where *m* is the mass, and *v* is the velocity of the particle.

With our own terms we shall naturally use our own abbreviated symbols in our own script. Through our symbols, our men shall reach the words for which they stand and vice versa. They can make their abbreviations not only for the present, but in the future also. This backward and forward movement is not possible if we should be so inconsiderate as to attempt to have either foreign alphabetic symbols or foreign words or both, using throughout our own script or confining our script to non-scientific terms and symbols. The typographical discord and the intellectual confusion that will result, will benefit no one.

Let us look at abbreviations from the graphic and vocal points of view. From the graphic view, a single graphic unit is a better abbreviation than two graphic units. Our script allows one, two or three consonants and a vowel, i.e. a syllable to be the graphic unit. Hence we have a vast variety of single graphic unit symbols. In English, the scope is restricted to small, capital and italic, Greek and Roman letters, all told a few scores. In our case, they are a few thousand.

In English and other European languages the graphic unit is a letter, i.e., either a consonant or a vowel. For distinction, it is usual to have beside the initial letter another medial or final letter. This use of di-, tri-, or poly-literal abbreviations leads to two, three or more graphic units.

Vocally, our abbreviations are mono-syllabic. In English too the mono-literal graphic unit is vocally a mono-syllable. One cannot pronounce anything less than a syllable. But in the case of poly-literal abbreviations, the Englishman usually has to pronounce as many syllables as letters (particularly when they are formed of consonants only). Our graphic and vocal unit being the syllable, we rarely require poly-syllabic abbreviations.

In the case of syncopates (e.g. 'ackgt.' standing

for acknowledgement, 'advtg.' for advertising), there is graphic economy but no vocal economy.

In English the distinction between smalls, capitals and italics is graphic and not vocal, unless one should prefix to every symbol, the word capital, small, or italic.

Scientific language and scientific symbols form one integral whole, just as the administrative language and administrative symbols form another integral whole. To anyone who would go far and deep enough, the unitary aspect of words and their alphabetic symbols would seem axiomatic. The few exceptions only fortify its paramountcy and unchallengeability.

In India abbreviations have been used as names from the most ancient times. In the Vedic literature a hymn, which is a collection of mantras, is often designated by its opening word or words. नासदीयसूक्त of the Ṛigveda is well-known (नासदीय 'that which begins with the two words न असद्'). Similarly यज्ञायज्ञीयसाम designates the mantra यज्ञायज्ञा वो अग्नये गिरागिरा च दक्षसे । प्रप्र वयममृतं जातवेदसं प्रियं मित्रं न शंसिषम्.

In the Sāma Veda we find that numbers play an important part in the musical notation along with signs and letters of alphabet.

The superscript letters and numbers used in Sāma Veda are the earliest precursors of the modern usage of superscript and subscript letters and numbers.

ईशोपनिषत् and केनोपनिषत् are derived from the opening words ईशा and केन respectively. The first chapter of Caraka Saṃhitā, the oldest Indian treatise on medicine, begins with दीर्घं जीवितम् अन्विच्छन् भरद्वाज उपागमत् and is hence named दीर्घंजीवितीयम्; so also many other chapters.

In music the seven notes are स (षड्ज, ष being popularly pronounced as स), रि (ऋषभ, ऋ is popularly pronounced as रि or रु), ग (गन्धार), म (मध्यम), प (पञ्चम), ध (धैवत), नि (निषाद).

In prosody a light syllable is known as ल (लघु) and a heavy one as ग (गुरु).

Sanskrit manuscripts show regular abbreviations of the titles which are repeated on every folio. It would be a fascinating study to make a collection of all the symbols and notations used therein. It would go up to hundreds.

Abbreviations and symbols were also made the basis of a mystic language, the language of Buddhist and Śaiva Tantric ritual, magic and thought. These symbols spread over the entire length and breadth of India and from here they migrated to the farthest limits of the East Indies and beyond the Himalayas into Tibet, Central Asia, Mongolia, China, Korea and Japan. In the Buddhist manuscripts recently exhumed in Gilgit a धारणी runs as follows: वृ वृ वृद्धिकरि । घृ घृ घृतकरि । यु यु आयुष्पालनि । (Vol. I, p. 74). Uddhārakosha, which is an ancient dictionary of the secret monosyllabic code of the Śaivas of North India, provides many such instances: इ (इन्द्र), घ्नीं (शतघ्नी), द्रां or द्रीं (चन्द्र), म (मण्डूक), छ (शनि, mark the deterioration of श to छ in the popular speech), ब (वीचि), ञ or ञं (यम, phonetically a most interesting instance of ञ pronounced as a nasalised य). ह्लीं is a combination of ह sky + ल darkness (काल) denoting *fine dust* ('that darkens the sky'). The pure nasal अनुस्वार is here and in many other instances the counterpart of the modern period (.), which marks an abbreviation, though it would be idle to dogmatise that the ancients were as conscious as we of this particular value of the अनुस्वार.

It is not only technical men who used abbreviations, but even literary men found occasion to use them; and among our lexicons a special genre known as एकाक्षरकोष was devoted entirely to them. For example: अ (अङ्गन, अन्तःपुर), ए (एकादशसंख्या, ए being the eleventh letter, so that अ is 1), अं (अंजलि), क (काय, काल, केका, कामग्रन्थि), कु (कुत्सा, used as a prefix), च (चपल, चोर, चन्द्र), छ (अच्छ clean, pure, छादन), ज (जव, जय, जेतृ, ज्योति), झ (झञ्झानिल), ड (डर fear, डमरुक, जड), डा (डाकिनी), ढ (गाढ, ढक्का, गूढ), त (अमृत, तर, तार), ता ('धातुवादविधौ', शाश्वतकोष ७५.३९), थ (पृथुल, नाथ), ध (धन, धान्य, बुद्धि, इन्द्रध्वनि, ध्यान, धन्वन्तरि), फ (शोफ, स्फार), ब (बुद्धि), भ (भ्रमर, भात्र), य (वायु, यम), या (ज्या), र (राजभय, रुधिर), ल (लवन, ह्लादन, तैल), वि (व्योम, वैराग्य), स (सर्प, स्यन्दनपथ).

Pāṇini, the greatest codifier of language, has employed a system known as प्रत्याहार, composed of the initial syllable and the final consonant of a series which is thus encompassed and designated by it. According to Pāṇini names can be shortened—देवदत्त to देव or दत्त, षडंगुलिदत्त to षडिक, सुपर्य्याशीर्दत्त to सुपरिय.

As symbols, Devanagari letters afford greater variety, and that just because it is a syllabic script, while the European has to be content with 26 letters of the Roman alphabet or their double 52 (making use of the capitals). Add to them the 24 letters of the Greek alphabet (only a few of the capitals have been used). He crosses some of his letters as an L or an S or an R to denote a pound, or a dollar or a recipe in medicine.

At our disposal we have got for purposes of symbols and abbreviations 14 vowels (including short and long ऋ and ऌ). Our consonants are 33. Every consonant can have 14 simple syllables by way of vowels. The fourteen can be tripled by getting two more sets, one with the superscript *anusvāra*, another with the side-script *visarga*. Thus the capacity of Devanagari is tremendous. It beats the Roman hollow and leaves it far behind. Whatever appendages in the form of diacritical, specificatory or correlating marks, e. g. dots, dashes, strokes, circlets, are employed by the Roman are just as well at our disposal. They use italics, so can we. They use letters as numbers, so have we done in the past and are doing in the present.

For correlation, different forms of the same letter have to be used sometimes. There Roman and Greek combined are able to muster together three e.g. A a α, B b β; or four G g Γ γ; or only two when the Greek is absent C c. Instead we have whole series क का कि की ... कं कां किं कीं... कः काः किः कीः ...

For graph work where a certain position has to be denoted by reference to horizontal and vertical grades, it is of the greatest convenience to mark one set by vowels and the other by consonants. Thus a particular position in the graph would be कि or जे etc.

Thus in following up the modern scientific symbols and abbreviations and providing for them in the Indian languages, we have at our back a solid tradition which serves as our foundation and leads us on smoothly. Not for a moment are we allowed to feel that we are treading on foreign terrain.

Indian Counterparts of Greek and Roman Letters of the Alphabet

Letters of the alphabet are sometimes used to indicate anyone or anything arbitrarily or conveniently so designated; specifically with quasinumerical force (A meaning first, B second, C third, etc., Ω last), as in distinguishing successive stages in the disintegration of radioactive elements.

Greek letters are even more frequently used with numerical significance (in order of their sequence in the Greek alphabet, not as Greek numerals), to express serial arrangement or position; to distinguish between allotropic forms of certain elements (cf. alpha iron, beta iron, gamma iron); to distinguish between isomers or modifications and to indicate the position of substituting groups in certain compounds.

We have allotted two separate sets of Indian letters to represent the Greek and Roman alphabets.

Greek and Roman letters have names: alpha, gamma, etc. These are uniformly translatable by the addition of -कार or -वर्ण —alpha अकार (अवर्ण), gamma इकार (इवर्ण).

α	alpha	अ
β	beta	आ
γ	gamma	इ
δ, Δ	delta	ई
ϵ	epsilon	उ
ζ	zeta	ऊ
η	eta	ऋ
θ	theta	ॠ
ι	iota	ऌ
κ	kappa	ॡ
λ, Λ	lambda	ए
μ	mu	ऐ
ν	nu	ओ
ξ	xi	औ
o	omicron	अं
π	pi	अः
ρ	rho	य
σ, ς	sigma	र
τ	tau	ल
υ	upsilon	व
ϕ	phi	श
χ	chi	ष
ψ	psi	स
ω, Ω	omega *'the last'*	ह

A	क	G	छ
B	ख	H	ज
C	ग	I	झ
D	घ	J	ञ
E	ङ	K	ट
F	च	L	ठ

M	ड	T	न
N	ढ	U	प
O	ण	V	फ
P	त	W	ब
Q	थ	X	क्ष
R	द	Y	त्र
S	ध	Z	ज्ञ

It should be noted that J, V and W are not always taken into account when consecutive numbers are marked with Roman letters. In that case, I and J both would be झ, *and K to U would be represented by* ञ *to* न. *X, Y, Z would remain unchanged.*

Many of the Greek and Roman letters stand as abbreviations and symbols. The most important of these are given in the main vocabulary.

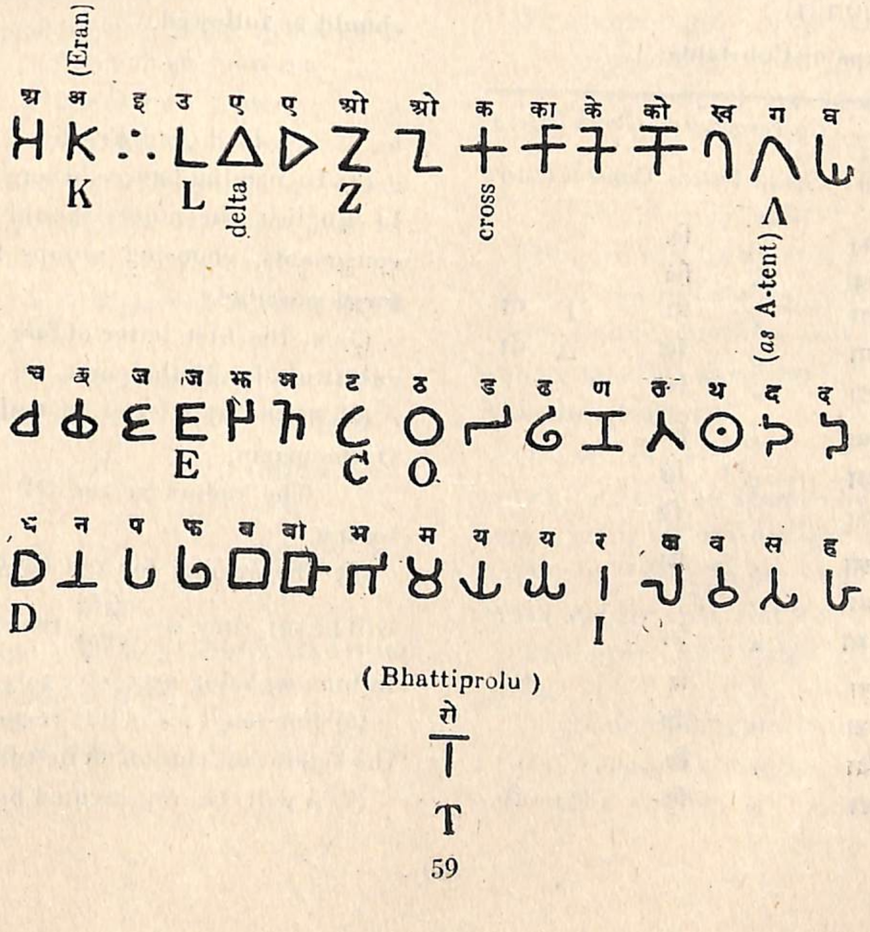
Forms of Letters

Some shapes and forms derive their names in English from capital letters of the alphabet, e.g., A (A-tent), T (T-tube). Our own alphabets, from Hindi up to Singhalese, are too ornamental for the purpose. In our search for simpler forms that would be serviceable (and authentic), we have arrived at Brahmi, which in the days of Ashoka, the greatest of great emperors, prevailed from the Himachala to the Malayachala. It is a simple script, as simple as the sans-serif Roman (English) capitals. Brahmi, the Indian alphabet par excellence, is the mother of all alphabets of India as well as of countries influenced by her, such as Ceylon to the south; Burma, Siam, Cambodia (कम्बोज), Malay archipelago to the east and south-east; Tibet to the north. Brahmi is the mother of a myriad scripts that are now lost in the sands of Central Asia, Mongolia and elsewhere. Traces of an Indian script have been discovered by Japanese scholars in Philippines. Sanskrit inscriptions are available as far as East Borneo. Brahmi has served the Aryans, the Dravidians, the Mongolians and the Turks for long periods and over wide expanses. It is the most scientific of the scripts of our globe, one symbol serving for one sound, every sound having a separate symbol, arranged and classified in a true phonetic system, musical and complete. In short, Brahmi is the pride and glory of India.

We reproduce below some of the Brahmi forms. Devanagari letters are put above them. In cases of resemblance English letters are noted below.



We had occasion to use some of the Brahmi syllables, e.g. रो for T (in T-tube). For clarity the word ब्राह्म may be prefixed, e.g., T = ब्राह्म रो.

It will be observed that Brahmi covers many forms than does the Roman, and that they can be utilised with perfect ease. It is, of course, expected that every Indian student will familiarize himself with the script that is the progenitor of his own.

(1) In the case of sides and angles of a triangle in plane and spherical trigonometry angles shall be denoted by अकारान्त consonants and the opposite or corresponding sides by the corresponding आकारान्त letters.

e.g. $\frac{\text{Sin A}}{a} = \frac{\text{Sin B}}{b} = \frac{\text{Sin C}}{c}$ would be

$\frac{\text{ज्या क}}{\text{का}} = \frac{\text{ज्या ख}}{\text{खा}} = \frac{\text{ज्या ग}}{\text{गा}}$

Where small letters and related capital letters occur together in English, the general arrangement should be followed.

e.g. $ax + by + c = 0$ क य + ख र + ग = ०

$Ax + By + C = 0$ का य + खा र + गा = ०

$Pp + Qq + Rr = 0$ ता त + था थ + दा द = ०

(2) In naming figures, where capital letters are used in English, the points should be denoted by अकारान्त consonants, choosing groups from the above table as far as possible.

(3) ब, the first letter of बिन्दु, is recommended as the substitute for P, the point.

(4) म, the first letter of मूलबिन्दु, should be used for O, the origin.

The radius vector OP will thus be represented by म ब.

(5) The symbol for the number π equal to 3.1416... will be प्या, since $\pi = \frac{\text{परिधि}}{\text{व्यास}}$, the conjunct consonant ending in long आ being necessary to give it a distinctive sound.

(6) For small r = radius vector, त्र shall be used, being the significant consonant in (सदिश) त्रिज्या.

(7) ρ will be represented by त्रि; being the first letter

of त्रिज्या the radius of curvature.

(8) r, θ, ϕ coordinate system will be त्र, ऊ, ए.

(9) s, ψ pedal coordinates will be ध, ऐ.

(10) n as any number will be represented by स of (काचि) सङ्ख्या.

(11) r or t used as a represented term will be न (निरूपित पद).

(12) r as a running term will be ध (धावी पद).

(13) e as the exponential will be represented by घा (abbreviated from घात) so that e^x is घा^{य}.

(14) The Cartesian coordinates x, y, z will be य, र, ल.

(15) The letter म does not come anywhere in the serial order (Table II). It is, therefore, available for being used as an unspecified general constant.

(16) Other symbols required in mathematics will be abbreviations for which the general rule to be followed is to select the first consonant with the vowel or the first vowel, dropping the उपसर्ग. In the case of a compound word, the abbreviation is to be taken from the more significant member of the compound.

(17) e^x read as e to the power x will be घा^{य}

		घा घात य
,, ,,	e raised to x	घा उन्नीत य
,, ,,	$e\ x$	घा, य.

(18) $a = b$ will be क=ख read as क सम ख.

(19) $\sum_{r=0}^{r=n}$ will be $\overset{\text{ध}=\text{स}}{\underset{\text{ध}=0}{\text{य}}}$ read as योग ध सम शून्य यावत् ध सम स.

(20) In the above the letter य has been used as an abbreviation of योग to represent summation for which Σ is used in English. The written symbol य is to be read as योग.

(21) $x = \log_b a$ will be य = छे$_{\text{ख}}$क read as य सम छेदा क आधार ख.

(22) Napierian log will be घ छेदा meaning छेदा आधार घ and log will be छेद्रा, for which the symbol will be छे.

(23) $a = 1 + x\log_e a + \frac{x^2(\log_e a)^2}{|\underline{2}} + \dots + \frac{x^n(\log_e a)^n}{|\underline{n}}$

क^{य} = १ + य छे$_{\text{घा}}$क + $\frac{\text{य}^2(\text{छे}_{\text{घा}}\text{क})^2}{|\underline{२}}$ + ... + $\frac{\text{य}(\text{छे}_{\text{घा}}\text{क})^{\text{स}}}{|\underline{\text{स}}}$

(24) $|\underline{n}$ will be $|\underline{\text{स}}$ read as हत स (हत abbreviated from एकादिहत). $n!$ will be स! read as स हत.

(25) $\frac{a}{b}$ will be $\frac{\text{क}}{\text{ख}}$ read as क भाजित ख (a by b), or क नीचैः ख (a upon b).

(26) $a \times b$ will be क × ख read as क गुणित ख (a into b).

(27) $a + b$ will be क + ख read as क युत ख (a added to b), or क अधिक ख, क धन ख (a plus b).

(28) $a - b$ will be क − ख read as क वियुत ख (a subtracted by b), or क ऊन ख, क ऋण ख (a minus b).

(29) The positive sign will be called अधिक or धन, the negative sign ऊन or ऋण.

$\pm$ will be read as अधिकोन,

$\mp$ will be ऊनाधिक.

(30) $\underset{n \to \infty}{\text{Lt}}$ limit n tending to infinity will be $\underset{\text{स} \to \infty}{\text{सी}}$ read as सीमा स अनन्ताभिगामी.

(31) Arrow will be called बाण ⟶.

(32) Rapidly convergent series शीघ्र अभिसारी श्रेढी.

Slowly divergent series मन्द अपसारी श्रेढी.

(33) nth will be स-वां (in Hindi) or स-तम (according to Sanskrit).

$(n+1)th$ will be (स+१)-वां (Hindi) or (स+१)-तम (according to Sanskrit).

$100th$ शत-तम.

(34) Dot will be बिन्दुक, dash प्रास, and bar दण्ड.

(35) Determinant $\triangle$ = नी (निश्चायक).

$\triangle_0$ = नी$_0$ read as नी शून्य.

$\triangle'$ = नी$'$ read as नी प्रास.

(36) Discriminant $\triangle$ = वे (विवेचक).

(37) Q (quotient) = भा (भागफल).

P (product) = फ (गुणनफल).

R (remainder) = श (अवशेष).

(38) $\sqrt{a}$ will be $\sqrt{\text{क}}$ read as करणी-चिह्न क, or मूल क.

$\sqrt[n]{a}$ (nth root of a) $\sqrt[\text{स}]{\text{क}}$ (read as स-वां मूल क).

$\sqrt[3]{a}$ (3rd root of a) $\sqrt[३]{\text{क}}$ (तृतीय मूल क).

(39) $a > b$ will be क > ख read as क ज्यायस् ख.

$a < b$ will be क < ख read as क कनीयस् ख.

(40) Round brackets will be called गोलाभिवार ( ), square brackets कोणाभिवार [ ], and braces प्राभिवार { }, vinculum शिरोवार.

(41) etc. is इत्यादि.

(42) ^nP_r will be denoted by ^{स}क$_{\text{न}}$ and ^nC_r by ^{स}च$_{\text{न}}$, च and क being taken from संचय and क्रमचय.

(43) In ^nC_r = ^{स}च$_{\text{न}}$ the superscript स will be called वाम मूर्धन्य and the subscript न will be called दक्षिण पाद्य.

(44) Superscript मूर्धाक्षर (letters written at the top), मूर्धांक.

Subscript पादाक्षर (letters written at the foot), पादांक

Symbols used in Physics *

The symbols used in physics are usually abbreviations of words for which they stand, e. g. a for Acceleration and Amplitude, c for Candle power, Capacity, Centigrade and Current, d for Density and Distance, e for Electronic charge, g for Gram, etc. The English language has no more than 26 letters, and 26 is too small a number. Hence some of the Greek letters are brought into service, e. g. having employed e for Electronic charge, epsilon is employed for Electrode. Another, equally arbitrary usage is that of small and capital letters, e. g. small m stands for Magnification, while the capital M is for Magnetic movement or Magnifying power. The usage may differ from book to book, e.g. for mass one may use either the small or the capi-

* भौतिकी 'physics' stands for भौतिकी विद्या. It is an adnoun from भूत (as in पञ्चभूत or भूतद्रव्य which are common terms for matter). भौतिकी विद्या or simply भौतिकी is the science of matter or more technically the science which deals with phenomena of (inanimate) matter involving no changes in chemical composition or more specifically with the most general and fundamental of such phenomena, namely motion. भूतद्रव्यविद्या, भौतिकपदार्थविज्ञान or पदार्थ-विज्ञान are other terms which are used for physics in Hindi, Bengali and other languages. But भौतिकी has the advantage of being a single, compact word which is more amenable to derivational formations than the longer compound words (see further, note on naming of sciences).

tal letter (m, M).

The symbol is usually the initial graphic unit, in Roman script a single letter of the alphabet, in Devanagari a vowel, or one or two consonants with a vowel. In Devanagari the graphic unit may be simplified, e. g., प for पुं of पुंजांक 'mass number', or instead of the initial graphic unit, the second may be used, particularly when the first syllable is an oft-used prefix, e.g., चू for प्र of प्रचूषण-शक्ति 'absorptive power'.

When pronounced a symbol forms a single syllable.

While in English the symbols are limited by the count of letters in Roman and Greek alphabets, the initial graphic units in Devanagari are numberless. That lends greater richness and clarity to the Indian symbols.

When English letters are not abbreviations, then क, ख, ग etc. represent a, b, c, etc.

WEIGHTS AND MEASURES

The Greeks had no numbers beyond the *myriad* "ten thousand" (10^4), while the Romans did not go beyond *mille* "one thousand" (10^3). The English word *million* is from Italian *millione,* augmentative from *mille* "thousand". In India our ancestors dealt freely with no less than eighteen denominations, and gave them specific names. In Lalitavistara, a biography of Lord Buddha, numbers go up to 10^{53}! शीर्षप्रहेलिका, a period of time among the Jains, occupies 194 notational places!!

As is well known, the decimal place value system is an Indian invention and it is from here that the system has spread to the whole world. Hence we are quite at home in dealing with the metric system. दश, शत, सहस्र, अयुत*, लक्ष and प्रयुत are single words and can be used simply and unambiguously.

Meter is from Latin *mensus* to measure, akin to Greek *metron* a measure, ultimately from Sanskrit √मा to measure. In English meter has two senses: (1) That which measures, an instrument or an apparatus, e.g. barometer, thermometer. In this sense it is usually a suffix. (2) A unit of length. Its Indian counterpart is मान. As a suffix it has been used in वर्षमान (कौटल्य अर्थशास्त्र) 'an instrument for measuring rainfall'. When standing by itself it has been used as a general word expressing measure as well as particular measures, e.g. according to the commentator of तैत्तिरीयसंहिता and कात्यायनश्रौतसूत्र 100 मानs make 5 पलs or पणs.

The word मान can be made to cover both the usage of meter, viz., (1) मान meter as the unit of length, and (2) मान as a suffix denoting a measuring instrument, e.g. तापमान thermometer.

Meter is subdivided into decimeter, centimeter, millimeter, etc. Their Indian equivalents would be दशिमान, शतिमान, सहस्रिमान, etc. Similarly for decameter, hectometer, kilometer, etc., which are its multiples, the Indian equivalents would be दशमान, शतमान, सहस्रमान, etc.

In weights and capacity measures we had great variety in the past. After long search we have been able to select out of these a series which can serve as the basis for the formation of modern English terminology. Even a cursory glance at the two sets, the ancient Indian and the modern English, will convince the reader that the English system is largely Indian, from the grain up to the ton. The weights are usually multiples of two ($2, 2^2, 2^3, 2^4, 2^5, 2^6$), with an occasional multiple of three or five. The starting point is यव, which is no more and no less than a grain. 180 यवs make one *tolā.* The present day Indian Government or Railway *seer* is

*दश-सहस्र and दश-लक्ष are the prevalent names now adays. But अयुत (10,000) and प्रयुत (million) are simpler and easier to use in compounds. Fortunately प्रयुत is one of those few higher numbers whose value is fairly constant right up from the यजुर्वेद (१७.२), तैत्तिरीयसंहिता (४.४०. ११. ४, ७. २. २०. १), पञ्चविंशब्राह्मण and शांखायनश्रौत down to Āryabhaṭa I (499 A. D.), Śrīdhara (750 A. D.), Bhāskara II (1150 A. D.), etc.

80 *tolās*; one *tolā* being exactly 180 grains (see also Webster's New International Dictionary of the English Language, 1934, s.v. *ser*).

माष is in use already. Hence it is not used. धान्य, which is another name for माष†, is 15 यवs, just as one gram is 15 grains (15.432356). Hence धान्य becomes the basis of the metric system of weights.

प्रस्थ is our unit of capacity measures since times immemorial. It is the counterpart of the modern liter. In Webster its value has been worked out to be 1.03 liters.

पाद् foot. पद् and पाद् both mean foot. The English word is historically a descendant of the Sanskrit word. As a measure पाद् has been used in the शतपथब्राह्मण, in the श्रौतसूत्रs and elsewhere. Like all other measures in ancient times it must have varied slightly from place to place. There are two measurements given for पाद्, one is 12 अंगुलs and the other is 15 अंगुलs (कात्यायनश्रौतसूत्र). The second measurement is approximately 11¼″. In modern times the foot is a fixed measurement of 12 inches. It was used extensively for measuring land. On the European Continent, the foot, now largely replaced by metric units, varies locally between 11 and 14 inches. It is interesting to note that as in India the पाद् was subdivided into 12 aṅgulas so in the English system also the foot is subdivided into 12 parts, the inches. Only an inch is slightly longer than an अंगुल (and hence our word प्रांगुल for inch). An inch was originally divided into three parts called barley corns, whose length was declared by a statute apparently of 17 Edw. II given in the Cottonian Manuscripts (Claudius D. 2) to be that of 'three grains of barley, dry and round', placed end to end lengthwise.

Originally क्रोश is the range of the voice in calling or hallooing. In ancient literature क्रोश is equal to one thousand दण्डs or four thousand हस्तs (हस्त cubit). हस्त is the fore-arm from the elbow to the tip of the middle finger and is equal to twenty-four अंगुलs or eighteen inches. Thus a क्रोश is six thousand feet as against 5280 feet of the English mile. As a mile is shorter than a क्रोश, -क is added to क्रोश to signify diminution.

Just as the Indian क्रोश is formed of one thousand दण्डs so the English mile is originally one thousand paces.

'Mile' is from Latin *milia, millia*, plural of *mille* a thousand, i.e. *milia passuum* 'a thousand paces'. *Mille* is akin to Sanskrit मेला 'multitude, a large number'. Mile has changed from time to time and place to place. The ancient Roman mile was about one thousand six hundred and twenty English yards, while the old Scotch mile was 1.123 and the Irish mile 1.273 statute miles. On the Continent the old miles which have been replaced officially at least by the kilometer, varied from about 11 hundred yards to over 12 hundred yards. The geographical, nautical or sea mile is the length of a minute or 21,600, of a great circle of the earth. According to the value adopted by the British Hydrographic Office, it is six thousand eighty feet and is called the Admiralty mile. The Roman *passus* was from the heel of one foot to the heel of the same foot when it next touched the ground, making five Roman feet. This has to be compared with the Punjab *karam* (Sanskrit क्रम) which is also 5 feet and is commonly in use among the villagers.

नल्व and क्रोश are shorter than furlong and league respectively. Hence furlong is प्रणल्व and league is प्रक्रोश.

In liquid measures start is made with प्रसृति, our counterpart of gill.

४ प्रसृति = शराव
८ शराव = आढक
६४ आढक = खारी

The same relationship is shown by the English measures :

4 gills = pint
8 pints = gallon
63 gallons = hogshead

(Note the slight variation in the last item). This gives us the following equivalents:

pint = शराव
gallon = आढक
hogshead = खारी

The apothecaries' fluid measure name equations have been similarly worked out:

minim = बिन्दुक
fluid dram = तरल शाण
fluid ounce = तरल शुक्ति

† The goldsmith's माष of 15 यवs is slightly different, being 17 grains troy.

pint = (तरल) शराव
gallon = (तरल) आढक.

In dry measures the starting point is शराव = pint. Sixty-four शरावs make a शूर्प. So do 64 pints make one bushel. Hence bushel is शूर्प. A barrel is much greater than a द्रोणी. Hence it has been rendered by महाद्रोणी.

In circular measures अंश = degree is well known. कला has been used for a minute and विकला for a second. कला and विकला are both ancient words.

Avoirdupois weights being the commonest in use are called सामान्य भार. The starting point is यव = grain. The next weights are dram, ounce and pound. The dram and ounce are lighter than our शाण and शुक्ति respectively. So they are termed शाणक and शुक्तिका. The pound is heavier than our अञ्जलि. Hence it is termed प्राञ्जलि. The hundredweight approximates our गोणी, which word we have retained without the addition of a prefix or a suffix. 20 गोणीs make a प्रवर्त. So do 20 hundredweights a ton. Hence ton is प्रवर्त.

The word ton has been used variously in the English language :

short ton (ton) प्रवर्त, लघु प्रवर्त
long ton (2240 lbs.) = gross ton, shipper's ton दीर्घ प्रवर्त
metric ton = millier = tonneau प्रयुत-धान्य, मानिक प्रवर्त
assay ton परीक्षा-प्रवर्त
commercial ton वाणिज्य-प्रवर्त
(Cornish) mining ton (2352 lbs.) खनि-प्रवर्त
nautical ton नावीय प्रवर्त
register ton (a unit of internal capacity for ships—100 c.ft.) पञ्जी-प्रवर्त.

Troy weights are हैम भार (हेम gold). A troy grain is the same as an avoirdupois grain. Pennyweight (24 grains) is much bigger than our माष (15 यवs). So it is termed महामाष. 480 यवs make one शुक्ति. So do 480 grains make one ounce troy. Thus an ounce is exactly a शुक्ति. The pound troy (5760 grains) being smaller than the pound avoirdupois (7000 grains, प्राञ्जलि) is प्राञ्जलिका. A carat (3.086 grains troy) would be प्रगुञ्ज (3 यवs make one गुञ्ज); and a carat grain (one-fourth of a carat) is यवक. *Crith* (Gk. *krithe* "a barley corn") is प्रयव. It is .08987 gram = 1.34805 grains = a liter of hydrogen at n.t.p.

In apothecaries' weights grain and pound are the same as in the troy system. Scruple (20 grains) is प्रमाष (माष being 15 यवs). Dram (60 gr.) and ounce (480 gr.) are exactly शाण (६० यव) and शुक्ति (४८० यव).

A consolidated series of ancient weights and cubic measures, from a यव to a प्रवर्त, is attached below:

१५ यव = माष
४ माष = शाण
२ शाण = कोल
२ कोल = कर्ष
२ कर्ष = शुक्ति (अष्टमिका)
२ शुक्ति = पल (प्रकुञ्च, मुष्टि)
२ पल = प्रसृति
२ प्रसृति = अञ्जलि (कुडव; ३८४० यव)
२ अञ्जलि = शराव (मानिका; ७६८० यव)
२ शराव = प्रस्थ (a seer)
४ प्रस्थ = आढक
४ आढक = द्रोण
२ द्रोण = शूर्प
२ शूर्प = द्रोणी, गोणी (९९२,०४० यव; cwt. = 700,000 gr.; long cwt. = 784,000 gr,)
४ द्रोणी = खारी
५ खारी = प्रवर्त (१९,८४०,८०० यव; ton = 14,000,000 gr.; long ton = 15,680,000gr.; प्रवर्तः पञ्चखारिभिः सस्यमाने प्रकीर्तितः — भानुजीदीक्षितकृता अमरटीका व्याख्यासुधा, वैश्यवर्गे श्लोकः ८९)

A word about the abbreviations. The first syllable usually serves the purpose, but in certain cases, for example when the word begins with an oft-used prefix like प्र, there are deviations. These should be carefully noted.

MATHEMATICS

"It is India that gave the ingenious method of expressing all numbers by means of ten symbols, each symbol receiving a value of position, as well as an absolute value; a profound and important idea which appears so simple to us now that we ignore its true merit; but its very simplicity, the great ease which it has lent to all computations, puts our arithmetic in the first rank of useful inventions.

"Even though there has been a slow growth of ideas in the history of human civilization, the history of reckoning presents a peculiar picture of desolate stagnation. When viewed in this light, the achievement of the unknown Hindu, who sometime in the first centuries of our era discovered the principle of position, assumes the proportion of a world event.

"The invention of śūnya or zero liberated the human intellect from the prison bars of the Greek counting frame. Once there was a sign for the empty column, "carrying over" on slate, paper or other material for writing was just as easy as carrying over on the abacus.

"Āryabhaṭa about A.D. 470 discusses the rules of arithmetic, uses the law of signs of Diophantus, gives a table of sines in intervals of $3\frac{3}{4}$, and evaluates π as 3.1416. **In short, Hindu mathematics starts where Alexandrian mathematics left off.** Just a little later, in the sixth century, comes Brahmagupta, who follows the same themes as Āryabhaṭa : calculation, series, equations. These early Hindu mathematicians had already stated the laws of 'ciphers' or śūnya, on which all our arithmetic depends, namely,

$$a \times 0 = 0$$

$$a + 0 = a$$

$$a - 0 = a^*$$

"Equipped with their simple and eloquent number symbols the Hindus broke away completely from the metaphorical way of dealing with fractions. They wrote fractions as we write them and they had an arithmetic which lent itself to rapid calculation without mechanical aids, they experimented with them as with whole numbers. Thus Mahāvīra (A. D. 850) gave our rule for dividing one fraction by another in the same words which a school teacher might use today 'make the denominator the numerator and then multiply'.

"All the algorithms for fractions now used were invented by the Hindus.

"Is it not equally strange that algebra that corner-stone of modern mathematics also originated in India and about the same time that positional numeration did ?

"The advance from 'rhetorical' discussion of rules for solving problems to symbolism of the modern sort was wellnigh impossible for the Greeks, who had already exhausted the letters of the alphabet for proper numbers. Although the Hindu numerals removed this obstacle to progress, there was at first no social machinery to impose the universal use of devices for representing operators. The only operative symbol which was transmitted to us by the Arabs from Hindu sources is the square-root sign (√)".

उत्पादकं यत्प्रवदन्ति बुद्धेरधिष्ठितं सत्पुरुषेण सांख्याः ।
व्यक्तस्य कृत्स्नस्य तदेकबीजमव्यक्तमीशं गणितं च वन्दे ॥

(Bhāskarācārya, 12th century A.D.)

Algebra is बीज, बीजक्रिया or बीजगणित, the science of analysis, the operation or computation with 'seeds'. It was also known as कुट्टक-गणित or simply कुट्टक (which dealt particularly with indeterminate equations of the first degree). Another name was अव्यक्त गणित 'calculations with unknowns' as against व्यक्त गणित 'calculation with knowns' used for arithmetic and geometry.

According to our ancients, the values of symbols in arithmetic are व्यक्त that is definitely determinate while in algebra they are अव्यक्त that is indefinite. Bhāskarācārya clearly said that the science of अव्यक्त गणित is the source of the science of calculation with knowns.

Ancient Hindu algebra comprised the laws of signs, the arithmetic of zero and infinity, operations with unknowns, surds, indeterminate equations of the first degree and the square-nature or the so-called Pellian equation. To these may be added concurrence and dissimilar operations.

Algebra began early in India during the Vedic age. The geometrical method of the transformation of a square into a rectangle having a given side is equivalent to the solution of a linear equation in one unknown—

$$ax = c^2 .$$

Vedic fire-altars were constructed in different geometrical designs, one of them was the श्येन-चिति (in the form of a falcon). Its body consisted of four squares, each of its wings a rectangle, and so on. This fire-altar was enlarged in two ways—firstly, so that all the constituents were affected in the same proportion, secondly, so that the breadth of a portion of the wings was left unaffected. If x be the unit for enlargement in the first case, we shall have to solve the quadratic equation

$$2x \times 2x + 2\left\{x\left(x + \frac{x}{5}\right)\right\} + x\left(x + \frac{x}{10}\right) = 7\tfrac{1}{2} + m,$$

where m denotes the increment of the fire-altar in size.

Therefore $x^2 = 1 + \frac{2m}{15}$

In particular, when $m = 94$, we shall have

$$x^2 = 13\frac{8}{15} = 14 \text{ (approximately)},$$

which occurs in the Śatapatha-Brāhmaṇa.

In the second case of enlargement the equation for x will be

$$2x \times 2x + 2\left\{x\left(x + \frac{1}{5}\right)\right\} + x\left(x + \frac{1}{10}\right) = 7\tfrac{1}{2} + m,$$

$$\text{or } 7x^2 + \tfrac{1}{2}x = 7\tfrac{1}{2} + m,$$

which is a complete quadratic equation.

The problem of altar construction gave rise also to certain indeterminate equations of the second degree, such as,

(1) $x^2 + y^2 = z^2$
(2) $x^2 + a^2 = z^2$;

* To this is to be added $\frac{a}{0} = \infty$

and simultaneous indeterminate equations of the type

$$ax + by + cz + dw = p,$$
$$x + y + z + w = q.$$

SYMBOLS OF OPERATION—The first syllable of a word, placed before or after the quantity, served the purpose of the symbol. For addition one of the Sanskrit words is युत. It is abbreviated to यु. Similarly the ancient Brahmi क, which is a cross, stands as the symbol of subtraction, being the abbreviation of क्षय. गु abbreviated from गुणन or गुणित stands for multiplication and भा from भाग or भाजित for division. Often these symbols are not used. Juxtaposition serves the purpose. The use of these symbols is best illustrated by the Bakhshali manuscript. Bakhshali is a village in the Peshawar district. The manuscript lay between stones. It was discovered by a farmer who was digging in the mounds in 1881. This is the oldest mathematical manuscript yet discovered. It is written in ancient Śaradā script of Kashmir on birch-bark. Its age has been variously estimated, some placing it in the second century (in the days of Kanishka), others as late as the twelfth century A.D.

In later times there was a change of plan in the writing of equations. Here are two illustrations, one from Pṛthūdakasvāmī (860 A.D.) and the other from Bhāskarācārya (1150 A.D.)—

(1) या व ०   या १०   रू ३
या व १   या ०   रू १

writing x for या

$$x^2.0 + x\,10 - 8$$
$$x^2 + x.0 + 1$$

or $0x^2 + 10x - 8 = x^2 + 0x + 1$

which means $10x - 8 = x^2 + 1$.

(2) या ५   का ८   नी ७   रू ९०
या ७   का ९   नी ६   रू ६२

writing x for या, y for का and z for नी

$$5x + 8y + 7z + 90 = 7x + 9y + 6z + 62.$$

Equations were classified as यावत् तावत् (simple), वर्ग (quadratic), घन (cubic) and वर्गवर्ग (bi-quadratic). The स्थानांगसूत्र of Jainas (सूत्र ७४७) is sometimes interpreted to refer to these equations. Another classification of equations is according to Brahmagupta of 628 A.D. एकवर्ण-समीकरण, अनेकवर्ण-समीकरण and भावित, i.e. equations in one unknown, in several unknowns, and such as involved products of unknowns. एकवर्ण-समीकरण is further subdivided into linear equations and quadratic equations अव्यक्तवर्ग-समीकरण.

It would be interesting to follow the ancient algebraists of India one by one and century to century. But it would be outside the scope of this introduction. Here I shall mention in passing a point or two which are of particular interest for the history of mathematics. In 850 A.D. Mahāvīra, a Jain author, wrote an epoch-making work गणित-सारसंग्रह. He knew that the quadratic has two roots, and he employed the modern rule for finding the root of a quadratic.

$$x = \left\{\frac{c/2}{1\text{-}a/b} + \sqrt{\left(\frac{c/2}{1\text{-}a/b}\right)^2 + \frac{d}{1\text{-}a/b}}\right\}^2$$

Our rock-bottom is formed by ancient words—अंश numerator, degree, अंक digit, अन्तर distance, अपेक्षित required, आदेश substitute, आरोही ascending, उपपत्ति proof, करणी surd, क्षितिज horizon, श्रेढी series, वज्रगुणन, वज्राभ्यास cross multiplication, समीकरण equate, निर्वचन interpretation, निदर्शन illustration, बीजगणित algebra, मूल root, radical (the European words are translations from Sanskrit), योग sum, राशि quantity, लब्धि quotient, अपवर्त्य multiple, हर denominator, सारणी table, etc., etc.

Then there are words of common usage—अग्र leading, अचल constant, अनियत indefinite, अनुसंधान investigation, आधार base, आवर्ती recurring, उच्चतम highest, उन्नयन raising, ऐकात्म्य identity, चल variable, निश्चायक determinant, नियम law, पंक्ति row, प्राकृतिक natural, महत्तम greatest, रेखा line, रेखीय linear, लक्षण characteristic, वास्तविक real, विवेचक discriminant, विस्तार expansion, साधारण common, सामान्य general, सीमा limit, etc., etc.

Our ancients used a variety of terms to denote the same idea or the same term to denote various ideas. For us it was neither desirable nor possible to use one word for more than one idea or more than one word for the same idea. We had to use definite terms so that there be no confusion as to what is meant. Thus कर्ण is used for the hypotenuse as well as the diagonal. रूप means form, arithmetical unit, integral numbers, known or absolute number, and a known quantity as having specific form. Similarly वर्ण appears for the letters of the alphabet for an unknown magnitude or quantity in algebra, for the figure 1 in arithmetic and according to some for a coefficient.

For quotient we have भाग, लब्धि, आप्त, आप्ति, अवाप्त, अवाप्ति, फल, लब्ध. For coefficient we have गुण, अंक, प्रकृति वर्ण and यावत् तावत्. The coefficient of a root in algebra is मूलगुण. Here गुण is an agent noun, meaning a multiplier, equivalent to गुणक. For multiplication itself, Sanskrit mathematical literature shows a variety which is unsurpassed—गुणन, गुणता, हनन, हति, हत, अभिहति, वध, वर्गणा, पूरण, अभ्यास, क्षोद, प्रत्युत्पन्न. अनुपात stands for proportion, arithmetical progression and rule of three.

Some of the important specific terms used in mathematics are explained hereunder:

अंश 'numerator' and 'degree' is an ancient word. Grade has to be distinguished from degree. It is $\frac{1}{100}$th part of a right angle and thus smaller than a degree which is $\frac{1}{90}$th part of a right angle. It has been translated by अंशक, smaller than an अंश, the suffix -क denoting diminution.

अक्ष has been used in Indian astronomy for 'terrestrial latitude'. We have used the specific word अक्षवृत्त (cf. विषुवद्वृत्त equator, देशान्तरवृत्त longitude). In our terminology अक्ष has been retained for 'axis'.

अधिकोण is an obtuse angle. अधि stands for अधिक i.e. an angle greater than a right angle. Cf. न्यूनकोण acute angle.

अनावर्ती 'nonrecurring' is from आवर्ती 'recurring' आवर्तन is 'recurrence'.

अनुच्छेद 'article' is already in use in Bengali. It has also been used in the Hindi version of the Indian Constitution. Etymologically अनु- small + छेद section.

अनुरेखण 'trace', i.e. 'to copy by following (अनु) the lines (रेखा)', is a denominative verb. अनुरेखित traced.

अन्यथा 'aliter'. Aliter is a Latin word meaning otherwise. For the Indian student अन्यथा has its parallel formations in यथा, तथा, etc.

अपवर्त्य is used for multiple in Hindi and Bengali. अपवर्तक is an ancient word in the sense of a common measure. अपवर्तन is reduction of a fraction to its lowest term.

अयुग्म 'odd' and युग्म 'even' are ancient words used as early as the गृह्यसूत्रs.

अर्हा 'value' is from √अर्ह् to deserve, to merit, to be worthy of.

अल्पिष्ठ least. Cf. भूयिष्ठ maximum. Both are ancient words.

असंमेय is a faithful translation of incommensurable, element by element: *in-* अ- + *-com-* -सं- + *mensurare* √मा + *-able* -एय.

आदेश 'substitute' is well-known to students of Sanskrit, e.g. Pāṇini: स्थानिवदादेशोऽनल्विधौ.

आयत 'rectangle' is an ancient word and is also in common use in Hindi, Bengali and other Indian languages.

आयाम 'length' is an ancient word.

अर is the spoke of a wheel, hence a radius. From अर is derived आर radian, i. e. a central angle subtended in a circle by an arc whose length is equal to the radius of the circle. Radian, when used as an adjective, would be आरीय.

आवर्तकाल, आवर्त period. आ + √वृत् 'to turn round'.

उच्छ्राय and उच्चता have been specifically used for altitude and height respectively. Both are ancient

words.

उदग्र is an ancient word, 'point upwards', hence 'vertical'.

उपसादन to bring near, उपसन्न brought near, approximate. उभयसाधारण common to both.

उपसाध्य corollary, साध्य proposition. A corollary is a proposition requiring no additional proof following upon one just demonstrated.

एकक unit ('a single thing, as a magnitude or number regarded as an undivided whole'). It is used in this sense in Bengali (see Guha's Modern Anglo-Bengali Dictionary).

ऐकात्म्य identity, from एकात्म identical.

कर्ण 'hypotenuse of a triangle' is an ancient word.

कला 'minute' occurs in सूर्यसिद्धान्त and other works.

क्रमचय and संचय for 'permutation' and 'combination' respectively are self-explanatory terms and have been used as being clearer and more definite than भावना for combination and व्यतिचार for permutation.

क्षितिज 'horizon', occurs in आर्यभट and सूर्यसिद्धान्त. It is also widely used in Hindi, Bengali, Marathi, etc. क्षैतिज is horizontal.

क्षेत्रफल area. The word is used in the गोलाध्याय and कात्यायनश्रौतसूत्र as meaning the superficial contents of a figure. It is current in Hindi, Bengali, etc. फल is also used by आर्यभट for area of a figure. Thus स्फुटफल occurs for distinct or precise area (of a triangle, etc.).

घात 'power', is widely used in Hindi. It is an ancient word. It is from √हन् to multiply.

चरण quadrant. It is an ancient word and signifies a fourth part.

चाप 'arc' is from सूर्यसिद्धान्त.

छेदा logarithm. According to नेमिचन्द्र the Jain author of त्रिलोकसार if $x=2^n$ then n is called the अर्धच्छेद of x. छेद is the number of times a particular number can be divided by a base. If $64=4^3$ then 3 represents the number of times that 64 can be divided by 4. Literally छेद is 'cutting' and the number of times that the division can take place is छेदसंख्या or simply छेदा. In $64=4^3$, 3 is the log of 64 to the base 4. दशच्छेदा common logarithm. दशच्छेदापद्धति common system of logarithms, i. e., logarithms having 10 for their base. Its complete translation would be दशाधारछेदा. For brevity दशच्छेदा has been used instead. प्रति-छेदा anti-logarithm.

ज्या is the parent of 'sine'. ज्या 'sine of an arc' has been used in the सूर्यसिद्धान्त ११.५७. कोटिज्या 'cosine' is also from the सूर्यसिद्धान्त. There it signifies the cosine of an angle in a right-angled triangle. उत्क्रमकोटिज्या coversed sine. उत्क्रम is versed or reversed.

स्पर्शज्या (abbreviated to स्पज्या) is tangent when it is the portion (of the straight line tangent to a curve) between the point of tangency and a given line. In the sense of a tangent line or curve it is स्पर्शरेखा or simply स्पर्शी.

त्रि-कोण-मिति is a Sanskrit facsimile of the European word tri-gono-metry. *Tri-* is Sanskrit त्रि. कोण for Greek *gonia* is the commonest Indian word for angle. त्रिकोण already occurs in the Mahābhārata. कोणस्पृग्वृत्त of भास्कराचार्य has been translated by Colebrooke as a 'circle in contact with the angles; an exterior circle; one circumscribed.' *Metry* is मिति 'measurement', from Sanskrit root मा to measure.

दशमिक decimal. दशमलव is widely used in Hindi for decimal. Here is visible an attempt to have a phonetic approximation to the English word. But लव meaning a part is not required after दशम, as दशम itself means the tenth part. Decimal is derived from Lat. *decimus* 'tenth' from *decem* 'ten' +*-al*, of which the exact Indian equivalent will be दशमिक (दशम tenth+-इक). In Bengali दशमिक is already current (see Guha's Modern Anglo-Bengali Dictionary).

दशमिकांश 'mantissa'. The Indian word is crystal clear while the English word is perfectly opaque. In Latin it meant an addition, make-weight. The word is believed to be of Etruscan origin. This word has gone out of use in general English, where it meant an addition of little value. In mathematics it denotes the decimal part of a common logarithm.

द्विघात समीकार quadratic equation. Quadratic is an adjective from quadrate 'square'. In a quadratic equation समीकार the highest power घात of the unknown quantity is a square द्वि.

द्विसम त्रिभुज isosceles triangle. Latin *isosceles* is from Greek *isoskeles*, *isos* 'equal'+*skelos* 'leg'. In geometry it is a triangle having two equal sides. It is a significant but unintelligible word. द्विसम त्रिभुज is in comparison simplicity itself. It is a त्रिभुज three-sided figure, द्वि two of the sides being सम equal.

धन positive and ऋण negative. धन in the sense of an affirmative quantity or plus and ऋण in that of a negative quantity or minus are ancient words.

ध्रुव pole. ध्रुव in the सूर्यसिद्धान्त signifies a celestial pole. It is widely used in all important Indian languages.

ध्रुववृत्त meridian. Meridian is a great circle वृत्त on the surface of the earth, passing through the poles ध्रुव and any given place. ध्रुववृत्त is short for ध्रुवान्तर्गामी वृत्त.

निर्मेय problem. A problem is a proposition requiring an operation to be performed or a construction निर्माण to be made. Literally निर्मेय is that which is to be constructed. Cf. प्रमेय theorem.

न्यास for data is widely used in our astronomical literature. Etymologically it is that which has been put down (नि+अस्) to serve as a basis for mathematical investigation. Literally data or its singular datum would be दत्त 'given'.

न्यूनकोण acute angle. It is less than a right angle. Cf. अधिकोण obtuse angle.

परि- circum-. परि as a prefix implies round, around, about. Circum- is used adverbially to signify around, about, on all sides. Cf. परिकेन्द्र circumcenter, परित्रिज्या circumradius, परिलेखन circumscribe, परिवृत्त circumcircle.

परिमाप perimeter, the whole outer boundary or measure माप of a body or figure.

पादांक suffix. It is an अंक or figure at the foot. Suffix or sub-index is a character affixed below to a symbol, to distinguish it in its class. Cf. मूर्धांक superscript.

पूर्णांक integer. The Indian term is quite clear in its meaning and is more readily intelligible than its English equivalent. पूर्णांक for integer, is used in Hindi, Bengali, etc.

प्रचय common difference. It is an ancient word.

प्रति- stands for anti-, प्रति-घटीवत् is anti-clockwise from घटीवत् clockwise. वामावर्त and दक्षिणावर्त are ancient words and can be used as alternatives.

प्रतिबन्ध condition. Condition is that which limits or modifies the existence or character of something, a restriction or qualification. The word is used in Hindi.

प्रनियम principle. प्रनियम=प्रथमनियम. Principle is a comprehensive law or doctrine from which others are derived or on which others are founded; an elementary proposition or fundamental assumption. The use of प्र in the sense of first is well-known. Cf. प्रकृति the original or primitive substance. प्रथम (प्र+तम) itself is a superlative of प्र.

प्रमेय for theorem is in use in several languages. Guha's Anglo-Bengali Dictionary gives प्रमेयोपपाद्य. प्रमेय is that which is to be established by प्रमाण or proof. Cf. निर्मेय problem.

फल 'result' is from सूर्यसिद्धान्त (the result of a calculation, product or quotient, etc.).

बहिर्लेखन escribe. बहिर्लिखित escribed. बहिर्लेखन is to write (or draw) externally. Escribe is to draw (a circle) touching one side of a triangle externally. बहिर्वृत्त excircle, बहिष्कोण exterior angle, बहिष्केन्द्र excentre.

बिन्दुरेख graph. बिन्दुरेख is literally dots and lines. A graph is a diagram symbolising a system of interrelations by spots (बिन्दु), all distinguishable from one another and some connected by lines (रेखा) of the same kind.

बिम्ब 'disc' is an ancient word.

भागफल quotient. Quotient is literally 'how many times'. It is the number resulting फल from the division भाग of one number by another. भागफल is current in Hindi and Bengali. लीलावती gives फल which we have already retained for result in general. Other ancient words for quotient are भाग, लब्धि, आप्त, आप्ति, अवाप्त, अवाप्ति, लब्ध.

भिन्न 'fraction' is from लीलावती. It is widely used in ancient Indian mathematics; some of its compounds are भिन्न-संकलन addition of fractions, भिन्न-गुणन multiplication of fractions, भिन्न-घन the cube of a fraction, भिन्न-भाग हर division of fractions (लीलावती).

भुज meaning the side of any geometrical figure has been used as early as कात्यायन-श्रौतसूत्र.

मापांक is clear than English 'modulus' which literally means 'a small measure'.

मिथश्छेदन intersect. Intersect is to cut छेदन into one another मिथः.

मूलक्रिया 'extraction of roots'. It is an ancient word. Latin 'evolution' means simply 'unfolding'.

यथार्थ exact. Cf. सुतथ्य precise, शुद्ध correct, परिशुद्ध accurate.

योग 'addition' is from सूर्यसिद्धान्त. Cf. वियोग 'subtraction' from गणिताध्याय.

राशि 'quantity', an ancient word, is current in Hindi, Bengali, etc.

रैखिकी geometry. रेखागणित is in common use. रैखिकी is short for रैखिकी विद्या the science pertaining to lines or the science of lines. Similarly प्राणिकी = प्राणिकी विद्या zoology, औद्भिदी=औद्भिदी विद्या botany.

Naming of sciences was as varied in ancient days, as it is today in the European languages. Sometimes abstract nouns were used, as परचित्तज्ञता. Chemistry, surgery are European examples of abstract nouns as names of sciences. In the names of arts and crafts, some word denotative thereof was suffixed—मधूच्छिष्टकृतम् wax-

modelling (मधूच्छिष्ट wax), सूचीकर्म needle-work, मणिभूमिकाकर्म gem-mosaic work. Sometimes the word denotative of art and craft was left out as in मणिराग colouring of precious stones. The general action noun करण has been used in शुक्रनीतिसार in धातु-सांकर्य-पार्थक्य-करणम् the art of combination and isolation of minerals.

कर्म standing for art was sometimes dropped particularly where the preceding word was itself a compound. It was usual to transfer the neuter gender of कर्म to the compound which was a sort of adjective made to serve as a noun. We have a beautiful example in the समवायसूत्र, viz. उदकमृत्तिकम्. The use of adjectives for naming sciences also became common, e.g. सांख्यम्, वैशेषिकम्, ऐन्द्रजालिकम्.

As for arts and crafts the general term कर्म was a neuter noun, so for different branches of knowledge there was the general term विज्ञानम्. शुक्रनीतिसार mentions धात्वादीनां संयोगापूर्वविज्ञानम् 'knowledge of new combinations of minerals', and काचपात्रादिकरणविज्ञानम् 'knowledge of making glass utensils'.

From the most ancient times we read of numerous विद्याs or sciences. The परा and अपरा विद्या of the उपनिषद्s are well-known. Again, adjectival forms with feminine endings, originally intended to be followed by विद्या, have been used in the same way as the neuter उदकमृत्तिकम्. मानसी thus is the science of the mind. त्रयी, वार्ता, आन्वीक्षिकी are well-known from the अर्थशास्त्र of Kauṭalya. रामचन्द्र in his commentary on the first verse of लक्ष्मणकवि, a continuation of चम्पूरामायण of विदर्भराज, mentions two sciences अदृश्यकरणी and दूरकरणी. The commentators of श्रीमद्भागवत, such as श्रीधर, record वैनयिकी विद्या, वैजयिकी विद्या, व्यायामिकी विद्या, वैतालिकी विद्या.

The adjectival suffix *-ic* in English (ultimately derived from Skt. -इक through Greek *-ikos*, Latin *-icus* and French *-ique*) has been similarly used. Greek or Latin nouns that were originally adjectives used substantively have been adopted into English, as arithmetic, music, logic, etc. Since 1600 A.D. the plural form *-ics* has been used instead to denote names of sciences as in physics, mathematics, politics, athletics, economics. This was probably in imitation of the Greek *ta phusika, ta ethika.* It is further interesting to note that these plural forms are now construed as singulars. In French and German the singular is still used in the names of sciences, e.g., *die Physik, die Politik* in German and *la physique, la politique* in French.

लम्ब 'perpendicular' is an ancient word. Other words used in ancient works are अवलम्ब (लीलावती), अवलम्बक, अधोलम्ब, आलम्ब, वलम्ब, कोटि (the perpendicular side of a right-angled triangle, सूर्यसिद्धान्त). Compounds from लम्ब are समलम्ब having equal perpendiculars, अन्तर्लम्ब a triangle in which the perpendicular falls within, etc.

लम्बकेन्द्र orthocentre. Orthocentre is the common intersection of the three altitudes of a triangle, or of the four altitudes of a tetrahedron provided these latter meet in a point.

लम्ब-कोण right angle, i.e., the angle कोण made by a perpendicular लम्ब. In Hindi and Bengali समकोण is sometimes used for a right angle. It is not a happy word because it means equal.

लम्बपूर कोण complementary angle. लम्बपूर is short for लम्बकोण-पूरक that which completes पूरक a right angle लम्ब-कोण.

वक्र 'curve' is an ancient word.

वर्ग square, वर्गमूल square root. In ancient usage वर्ग is the square of a number, e.g. पञ्चवर्ग square of five, भिन्नवर्ग square of a fraction. वर्ग and वर्गमूल are widely current in Hindi, Bengali, Marathi, etc.

वर्तुल 'circular' is an ancient word. It is from √वृत् to turn, to revolve. Cf. वृत्त a circle.

विकर्ण diagonal. In ancient mathematics कर्ण has been used for hypotenuse and diagonal both. कर्ण has been retained by us for hypotenuse, while the specificatory prefix वि- (here short for विशेष) has been added to कर्ण to designate a diagonal.

विकोणमान theodolite. Theodolite is an instrument for measuring horizontal and usually also vertical angles. विकोणमान is literally an instrument which measures मान angles कोण of various kinds वि, वि being short for विविध.

वियुत minus. It is from सूर्यसिद्धान्त.

वियोग 'subtraction' is from गणिताध्याय. Cf. योग addition.

विवेचक 'discriminant'. विवेक 'discrimination' is well-known. विवेचन is the verbal noun from the same root.

विषम 'odd', is from बृहज्जातक of वराहमिहिर. Also current in Hindi, Marathi, Bengali, etc.

वृत्त 'circle' is from गणिताध्याय. It is current in many Indian languages.

वैकल्पिक 'alternative' is an ancient word. It is used in Hindi, Bengali, etc.

व्यञ्जक 'expression' is the current Marathi word

and is also an ancient usage.

व्यास 'diameter' is from Vedic शुल्बसूत्रs.

व्युत्क्रम reciprocal. It is an ancient word meaning inverted order, so is the reciprocal of a function. In Latin 'reciprocal' is turning backward and forward.

शकल sector (part of a circle). शकल means a fragment, piece, or bit. In Kādambarī of Bāṇa occurs the expression चन्द्र-शकल

शतिक centesimal. शतिक 'hundredth' occurs in the बृहत्संहिता of वराहमिहिर.

शिरोदण्ड or शिरोवार bar = vinculum. शिरोदण्ड or शिरोवार the bar at the top. Vinculum is a straight horizontal mark placed over two or more members of a compound.

शिरोबिन्दु vertex. In any figure having a base it is the point बिन्दु opposite to and farthest from the base, the top शिरस्.

शून्य zero. It occurs in such works as गणिताध्याय and वराहमिहिर's बृहत्संहिता. From it are derived Gk. *kenos, keneos, kennos,* etc. That the conception of zero is essentially Indian is now well-known. According to the Encyclopaedia Britannica, the Sanskrit term शून्य passed into Arabic as *assifra,* from which are derived Italian, French and English zero.

श्रित function. "This term is used mostly to point out dependence on some certain variable or variables"—Mathematics Dictionary by G. James and R.C. James (New York, 1949). श्रित is the past participle form from √श्रि to depend on. आश्रय is from the same root.

श्रेढी 'progression' is an ancient word meaning a particular numerical notation or progression of figures.

षष्ठक sextant. Sextant is the sixth part of a circle. It occurs as early as पाणिनि.

षाष्टिक sexagesimal, meaning pertaining to or founded on, the number sixty. षाष्टिक is the adjectival form of षष्टि sixty.

संवादी 'corresponding' is an ancient word (e.g. in काव्यादर्श). Literally it means conversing with, hence agreeing or harmonizing with. The English word 'correspond' (com- + respond) etymologically means 'to answer to' from which are derived its figurative senses 'to answer in fitness, character, function, amount'.

संस्पर्श contact. Contact is from Latin *con-tactus* to touch on all sides. संस्पर्श = सं mutual, close + स्पर्श touch.

संचापारकोण radian. Radian is an angle कोण subtended by an arc चाप equal सं in length to the radius अर.

सत्यापन 'verification' is an ancient word. The verbal form is सत्यापयति verifies.

सदिश vector. Vector (from Latin *vehere, vectum* to carry) is a complex entity representative of a directed magnitude. सदिश means 'having a direction दिशा'. Our word is clearer and will be more easily understood by the Indian students.

समांग homogeneous, uniform. Homogeneous is alike in nature and therefore, comparable in parts (सम alike + अंग parts).

समान्तर श्रेढी arithmetic progression. गुणोत्तर श्रेढी geometric progression. Arithmetic progression is a progression श्रेणी whose elements progress by a constant (सम same) difference अन्तर (positive or negative) as 1,3,5, 7 or a, a ± d, a ± 2d, a ± 3d. 'Arithmetic progression' is not a very intelligible expression. Geometric progression is that in which elements progress by a constant factor, as 1,2,4,8,16, any term is obtained by multiplying the preceding one by the constant factor: गुणोत्तर श्रेढी—गुण multiplication, उत्तर successive, श्रेढी progression.

समायत square (figure). समायत is an आयत or rectangle with all the sides सम or equal. In Hindi वर्ग is used to denote a square figure as well as the product of a number or quantity multiplied by itself. We have retained वर्ग for the latter sense and समायत for the former.

समार्ह 'equivalent'. अर्हा is an ancient word. अर्हा 'value' is derived from the root अर्ह् 'to be worthy of'.

संपतन or संपात coincidence. The English word is derived from Latin *coincidere,* from *co- + incidere* to fall on. संपतन = सं- together + पतन falling.

संमितीय 'symmetrical' is from संमिति 'symmetry' (सम्- sym- + -मिति -metry).

सरलन simplify. सरलन is a nominal verb (नामधातु) from सरल simple.

सर्वांगसम congruent. सर्वांगसम (सर्व + अंग + सम) equal in all parts. Congruent is from Latin 'to come together, coincide, agree'. In geometry it means superposable so as to be coincident throughout. For us सर्वांगसम is simpler and more expressive than congruent.

साद्यन्त throughout. साद्यन्त (स with + आदि beginning + अन्त end). It is prevalent in this sense in Hindi and Marathi.

साध्य 'that which is to be found out by calculation, to be proved or established'. Similarly प्रमेय 'that which

is to be established by प्रमाण or proof'.

सामि-. The Latin prefix *semi-*, akin to Greek *hemi-*, is related to Sanskrit सामि-. It is combined chiefly with adjectives and nouns meaning half. Cf. semi-perimeter सामि-परिमाप.

सारणी for 'table' is of common use among the astronomers of India.

स्थिरांक 'constant', is a magnitude that is supposed not to change its value in a certain discussion or stage of investigation. The adding of अंक to स्थिर makes the Indian word clearer.

हर 'denominator' is an ancient word. It is derived from √हृ to take away, i.e. to divide.

TOPOGRAPHICAL MAPS

Topographical maps are useful for tourists, touring officers, archaeologists and hunters. In the army the survey maps are of inestimable value. Even the ordinary soldier uses them for finding out distance, direction and altitude.

Agricultural and industrial planners also make use of them.

Topographical maps mention a large number of items such as cultural features, water features, mining terms (e. g., mineshaft), military terms (e. g., rifle range, air bombing target), communication terms (e. g., aerodromes, railways, ropeways), forest terms, mountain features, heights, trigonometrical symbols, coastal symbols.

A few of these are explained hereunder :

Air bombing range वायु-प्रस्फोटन-क्षेत्र. प्रस्फोट is a bomb, 'that which explodes'. प्रस्फोटन is the verbal noun for bombing.

यूप is here used for the mooring mast. Hence विमान-यूप is "air mooring mast". यूप has been used in ancient literature, not only for the post or pillar to which a sacrificial animal was tied but also for a जयस्तम्भ (see शब्दकल्पद्रुम). यूप is derived from the root यु meaning 'to bind, fasten, hold fast', or from युप्.

स्थात्र is an ancient Rigvedic word for station. While the English word station has come into wide use in the compound 'railway station', it is not possible to use it in Hindi or any other Indian language in a compound like the seaplane station. -त्र is the suffix of location, i. e., a place where something stands. 'Station' too is etymologically akin to the Sanskrit root स्था.

'Feature' is 'form' or 'outer appearance' रूप and hence रूपधेय. Cf. नामधेय.

Perennial water is सदाजल (cf. सदानीरा, सदातोया which are names of ancient perennial streams). Non-perennial water is असदाजल.

Embankment is बद्धतट. बद्धतट, is more precise and expressive for an embankment, which is a structure of earth, gravel, etc. raised to prevent water from overflowing. बांध in Hindi is a general term and stands for embankment, dam, etc.

Canal नहर. It is an Arabic word for stream. In Northern India it is commonly used in the sense of a canal. It has been retained. Sanskrit is कुल्या. It is used in Kashmiri (क्वल), Bengali, Marathi, Nepali (कुलो), Sindhi (कूल), etc.

Lock is जलावरोध. Weir is Sanskrit वार. It is a most fascinating word. It is derived from Middle English *wer*, which is from Anglo-Saxon. It is a word of high antiquity, going back to Sanskrit वृणोति. It means 'to hold back, to keep in check'. In European languages, it has got several cognates, e. g., Greek *erysthai* 'to guard, to rescue', Latin *verire* 'to cover', Lithuanian *verti* 'to close or open', Gothic *warjan*, Modern German *wehren*.

Weir is a dam in a river to stop and raise the water for the purpose of conducting it into a new bed, or to a mill or the like.

रथ्या for road is a common Sanskrit term used especially for a road suited to wheeled traffic (from रथ 'a chariot').

एकपदी for foot-path is from Mahābhārata. The common Hindi word is पगडण्डी (पग a foot).

Aqueduct is जल-सेतु (a bridge सेतु for conducting

water). Via-duct is मार्ग-सेतु (a bridge for conducting a way). Via of Latin is akin to Sanskrit वीथि, Greek *oimos*, Lithuanian *vyti*. The full explanatory words would be जलवाहि-सेतु and मार्गवाहि-सेतु. But for the sake of brevity the intermediate वाहि has been dropped out.

Dam बांध. बांध is also an embankment. Sanskrit रोधन has been used by us as a specific term for dam as against बद्धतट for embankment. रोधस् and रोधना are other alternatives of high antiquity.

Siphon नि-नाल is the tube नाल whose one end goes down नि.

'Telegram' was first used on April 6, 1852. "A friend desires us to give notice that he will ask leave... to introduce a new word into the vocabulary. It is *telegram*, instead of telegraphic despatch, or telegraphic communication". *Albany (N. Y.) Evening Journal (April 6, 1852)*.

तार is a common word in Northern India for telegraph as well as for telegram. Hence it has been retained. But for technical and more specific usage it is necessary to translate the word. Telegram means a message by telegraph. Telegraph is originally 'an apparatus for communication at a distance'—दूर-लिख. Telegraph is also used for a telegram दूरलेख. Etymologically *tele-* is 'far' दूर + *gram* 'writing' लेख.

Tele- occurs in no less than two hundred words, some of which are—teleautogram, teleautograph, teleanemograph, telebarograph, telebarometer, telechirograph, telecinematography, telecode, telecommunication, telecryptograph, telectroscope, telegnosis, telegony, telegraphone, telegraphoscope, telehydrobarometer, telelectric, telelectrograph, telelectroscope, telemanometer, telemechanic, telemechanics, telemeter, telemetry, telemetrograph, telemotor, telenergy, telengiscope, telepath, telephone, telephonograph, telephoto, telephotograph, telephotography, teleradiophone, telescope, telescriptor, teleseismology, telespectroscope, telestereoscope, telesthesia, teletactor, teletape, teletherapy, telethermograph, telethermometer, teletopometer, teletype, teletypesetter, teletypewriter, television, televisor, televocal, televox, etc., etc.

When one looks at a series like this one knows that one has to deal not with a single word but with a pattern of words, whose initial element is *tele* which is दूर. While for ordinary purposes it would do to have the word तार but for more specific purposes and for achieving uniformity and understanding, one has to translate the word and distinguish between telegram (noun and verb), telegramic or telegramatic (adjectives), telegraph (noun and verb). Not only that. The word telegraph has derivatives too: telegrapher, telegraphic, telegraphically, telegraphist. It enters into compounds like telegraphone, telegraphoscope. Telegraphese, though not in common use, is a well-recognised word in the English language, meaning "a language characterized by terseness and elliptical expressions, such as are common in telegrams". Phrases with telegraph are numerous, e. g., telegraph wire, telegraph wireman, telegraph rope, telegraph plant or wireless telegraph, typewriting telegraph, solar telegraph, needle-telegraph, field telegraph, auto-telegraph, photo-telegraph, radio-telegraph, typo-telegraph and similar words ending in telegraphy.

Tele-communication includes communication by telephones, telegraphs, etc.

If we translate telegraph, telegram, telephone, television, etc., with दूर then we shall be having the same inter-connection as obtains in English. As pointed out before, it would be possible to have all the derivatives, compounds and phrases of telegram and telegraph by such a word.

Telephone is दूरभाष 'speaking from a distance'. In Siam they use the word दूरशब्द. It is a beautiful word. Only it does not yield a verbal form so readily. दूरभाष gives the verbal form दूरभाषण to telephone, दूरभाषक one who telephones, दूरभाषित telephoned, दूरभाषीय telephonic, दूरभाषणा telephony.

'Railway' is known only to the English-speaking world. Even in English-speaking countries there are other substitutes: 'ironway, ironroad, railroad'.

In other countries of Europe and the rest of the world 'railway' is usually translated with the help of local words for 'iron' and 'way or wagon'. In modern Greek it is *sidero-dromos*, in German *Eisen-bahn*, in French *chemin de fer*. Similarly in Arabic, Japanese, etc.

Railway has not to be taken as a single word. Rail, railway, railway train are three connected words.

Railway is one of a series of words expressing different types of ways—such as, water-way, rope-way, road-way, air-way, bridge-way, cable-way, wire-way, foot-way, sea-way, run-way, tram-way, etc., etc.

In most of these words 'way' can be uniformly translated by मार्ग.

For scientific purposes and to meet the requirements of compounds and derivatives it is necessary to give an Indian word अयोमार्ग (अयस् iron). Incidentally, it may be pointed out that अयस् is the parent of the Latin *aes*, German *Eisen* and English *iron*.

लोहमार्ग can be used as a synonym of अयोमार्ग, only in Southern India लोह often means metal. In the list of technical and scientific terms for chemistry issued by the Government of Madras in 1947, अयस् has been adopted as the term for iron or ferrum, अयक for ferric and अयस for ferrous (p. 25, s.v. *elements*).

Gauge—In railways gauge is the distance between the heads of the rails, or secondarily, the distance between the wheels of a vehicle. It has been translated by अन्तर with the specificatory prefix प्र.

Siding पार्श्वक is from side पार्श्व. It is also known as side-track पार्श्व-पथ.

Tram was originally a coal-wagon, nowadays, simply a wagon, whether for coal, for ores or for logs, hence a वाहिका. Tram-way would thus be translated fully by वाहिका-पथ which may be shortened to वाहिका.

Irish Bridge is the same as cause-way. Cause-way is originally *causey+way*. It is a raised way or road across wet or marshy ground. Hence it has been translated as उच्चमार्ग. Sometimes, however, cause-way stands for causey, meaning a high-way or a pave-way.

International अन्ताराष्ट्रिय is the correct Sandhi form for अन्तर् + राष्ट्रिय (Pāṇini रो रि ८.३.१४, ढ्रलोपे पूर्वस्य दीर्घोऽणः ६.३.१११ 'Final र्, followed by another र्, disappears, lengthening the short vowel that precedes it'). राष्ट्रिय again is a Pāṇinian form as against राष्ट्रीय in Śatapatha-Brāhmaṇa. राष्ट्रीय is widely used these days. Those who are not troubled by a grammatical conscience or those who are ignorant of it, can freely use अन्तर्राष्ट्रीय. Some others use आन्तर-राष्ट्रीय, using the adjectival form आन्तर instead of अन्तर् and thus avoiding the Sandhi.

Tribe is an aggregation of people, generally living in the forests—वनजाति. On account of their living together, they might be called गणजाति. In Orissa they are known as जनजाति, जन being used in the sense of प्राकृत जन common, unsophisticated men.

परगना is derived from प्रगणक, employed in ancient inscriptions.

Reserved and protected have been distinguished in the translation by आरक्षित and रक्षित respectively.

Wooded area is लघुवन. Wood is a dense growth of trees usually greater in extent than a grove and smaller than a forest. Wooded area might stand for a wood. It may be taken in its literal sense, 'the area covered with wood or trees'. In that case it would be वनाच्छादित क्षेत्र, वृक्षाच्छादित प्रदेश (प्रदेश region).

शीन for snow is a Kashmirian word. It is from Sanskrit √श्यै 'to be frigid, to congeal'. शीत, श्यान, अवश्याय (Hindi ओस dew), प्रतिश्याय (Marathi पडसें) are also from the same root.

Moraine is much better expressed by the Indian word हिमोढ (हिम ice + ऊढ carried, from √वह् to carry, वहन carrying, वाहन carriage) than by French *moraine*, which is of doubtful origin.

Crevasse is a fissure in the mass of a glacier or snowfield; hence हिमविदर (विदर fissure, वि asunder + √दृ to tear).

Contours or contour lines are imaginary lines connecting the points on a land surface that have the same elevation, समोच्चरेखा. Contour value is a समोच्चांक a figure (अंक) marking the elevation of the समोच्चरेखा.

Rock outcrops are तलागत शैल i.e. rocks that have come out to the surface of the ground (cf. mineral outcrop तलागत खनिज).

Terrace is उत्तल (उत् raised + तल surface).

Mangrove is a tropical maritime tree or shrub with numerous aerial prop roots which ultimately form an impenetrable mass, so that mangrove swamps become active land builders. वायुशिफ is the name given to the mangrove, from its aerial roots (शिफ root).

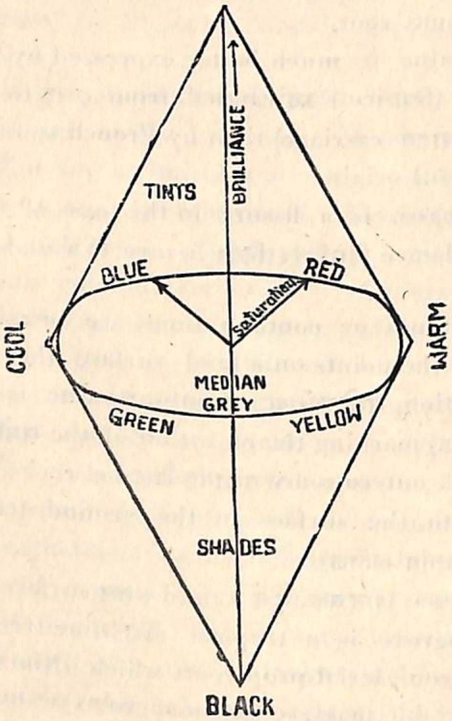
COLOURS

Colour may be regarded as a psychological category; it can be described and specified in terms derivable from introspective analysis, without any reference whatever to wave lengths, to energy, or to any physical category; but it is also possible to state the physical correlates of the psychologically determined attributes of colour and to draw up certain psychophysical relations between them. All colours are divisible into two classes, the chromatic colours, as reds, greens, purples, browns and pinks; and the achromatic, or neutral colours, including black, white and the intermediate series of greys. The latter are found to differ from each other only in their degree of



COLOUR SOLID

resemblance to or difference from black (or white). It is possible to form a series, ranging from black to white, with a median grey at the centre differing equally from black and white, and with each other grey differing from its immediate neighbours by equal sense differences. This series can be made into a scale by assigning an ordinal number to each grey, either ascending toward the lighter greys from black as zero or ascending with positive numbers and descending with negative numbers from median grey as zero. That attribute which thus measures the variation of the greys is called brilliance; dark greys have low, median grey has medium, and light greys have high brilliance.

Chromatic colours differ from each other not only in brilliance but also in hue and saturation. Hue is that attribute in respect to which colours may be described as red, yellow, green or blue, or as intermediate between two of these. Hues form a natural cyclic series (hue cycle, colour cycle or colour gamut). Colours of the same hue and equal brilliance may differ from each other in saturation, that is, in vividness of hue or in degree of difference from grey. In terms of these three attributes, colours can be arranged in a symbolic tridimensional space (colour solid) having the grey series as axis, with median grey at the centre and black and white at the extremities. Corresponding to each grey is a plane perpendicular to the axis, in which lie the points representing all colours of equal brilliance. In each plane, hue is represented cyclically in the order of the hue cycle, and saturation is represented radically, with the axial points (greys) as reference points of zero saturation. Thus any colour can be specified by giving three ordinal numbers (colour constants or dimensions) which are the co-ordinates of the corresponding point in the colour solid. By the establishing of arbitrary division points on the scales of brilliance and saturation any colour can be described as having very low, low, medium, high or very high position on these scales. "Of very low brilliance" means closely resembling black; "of low brilliance", about half way between black and middle grey; "of medium brilliance", about as brilliant as middle grey; "of high brilliance", about half way between middle grey and white; "of very high brilliance", closely resembling white. Similarly, "of very low saturation" means almost grey; "of very high saturation" means very vivid.

All hues may be described in terms of the four psychologically primary hues, red, yellow, green and blue, which are themselves indescribable in terms of other hues. Thus red-yellow denotes a hue

equally resembling, and differing equally from, red and yellow. Between each consecutive pair of the psychologically primary hues many intermediates can be recognized. By the establishing of arbitrary points of division on the hue cycle, hues can be classified as yellowish-red, reddish red-yellow, red-yellow, yellowish red-yellow, reddish-yellow, yellow, greenish-yellow, yellowish yellow-green, etc.

In the method of homo-hetero-analysis, or so-called mono-chromatic analysis hue is determined (to a first approximation but not exactly) by dominant wave length, saturation by purity and brilliance by total light. The wave length of the spectral light required for match is called the dominant wave length. The ratio of the intensity of the spectral light to that of the total (spectral plus grey) light is the purity. The third measure is the total light, integral with respect to wave length.

In the English tongue colours have been named not in a scientific but in an arbitrary manner. For example, opera pink, tea rose, germanium, cardinal, fluorite violet are reds with different grades of brilliance: very high, high, medium, low and very low respectively. Take another series of reds: peach, salmon, tile red, henna and plum similarly graded. These are known as common names of colours. They may be useful as containing standards for comparison, but every peach, plum and rose does not have the same hue, saturation and brilliance. For popular usage a number of these names have been retained in our translation, but it has been considered imperative to devise a system of scientific nomenclature, in which four hues, five intermediate grades between any two of them, five grades of saturation and five grades of brilliance have been made the basis of colour names. Every colour name specifies hue, saturation and brilliance, thus containing the complete definition within itself. Altogether, sixteen words have been employed, twelve prefixes and four nouns. They are familiar to every schoolboy. Only, he has to learn them in a new context.

HUES

To take the hues first. There are four primary hues: red, yellow, green and blue. Their common names are रक्त, पीत, हरि and नील. The intermediate colours between red and yellow, yellow and green, green and blue, blue and red are given hereunder:

red	yellowish-red	reddish red-yellow	**red-yellow**	yellowish red-yellow	reddish-yellow	**yellow**
रक्त	रक्तापीत	पीतातिरक्त	रक्त-पीत	रक्तातिपीत	पीतारक्त	पीत

yellow	greenish-yellow	yellowish yellow-green	**yellow-green**	greenish yellow-green	yellowish-green	**green**
पीत	पीताहरि	हर्यतिपीत	पीत-हरि	पोतातिहरि	हर्यापीत	हरि

green	bluish-green	greenish green-blue	**green-blue**	bluish green-blue	greenish-blue	**blue**
हरि	हर्यानील	नीलातिहरि	हरि-नील	हर्यतिनील	नीलाहरि	नील

blue	reddish-blue	bluish blue-red	**blue-red**	reddish blue-red	bluish-red	**red**
नील	नीलारक्त	रक्तातिनील	नील-रक्त	नीलातिरक्त	रक्तानील	रक्त

Besides the four wor ds standing for the four primary hues, two pre fixes आ 'slight' and अति 'much' are all that are required to be learnt.

SATURATION

(VIVIDNESS OF HUE)

विशदता

(वर्ण-सम्पत्)

Saturation is that attribute of chromatic colours which determines their degree of difference from a grey of the same brilliance; distinctness or vividness of hue. It is also called chroma, purity.

Prefixes for denoting different grades of saturation

grey	very low	low	medium	high	very high	vivid
धूसर	अप	अव	मध्य	उत्	अधि	विशदतम

Grades of saturation in terms of vividness

grey	very low	low	medium	high	very high	vivid
धूसर	अपविशद	अवविशद	मध्यविशद	उद्विशद	अधिविशद	विशदतम

BRILLIANCE

शुभ्रता

Brilliance is that attribute of a colour without which it cannot exist (except that black is considered to have zero brilliance), and in respect of which it may be classed as equivalent to some member of the series of greys ranging from black (as the zero member) to white; roughly, the degree of resemblance to white or difference from black. It is also called value, luminosity, visual or subjective brightness.

Prefixes for denoting different grades of brilliance

black	very low	low	medium	high	very high	white
काल	वि	नि	मध्य	प्र	सु	श्वेत

Grades of brilliance

black	very low	low	medium	high	very high	white
काल	विशुभ्र	निशुभ्र	मध्यशुभ्र	प्रशुभ्र	सुशुभ्र	श्वेत

Grades of greys

black			grey			white
काल	उपकाल (कालकल्प)	अतिधूसर	धूसर	आधूसर	उपश्वेत (श्वेतकल्प)	श्वेत

Grades of greys in terms of black and white

black						white
काल	कालाश्वेत	श्वेतातिकाल	काल-श्वेत	कालातिश्वेत	श्वेताकाल	श्वेत

EXAMPLES

Note 1. *The order in our translations is brilliance, saturation, hue. Saturation is connected with hue. Every hue has a saturation. So in colour names saturation prefix always comes nearer to hue.*

2. *If either brilliance or saturation be medium, the word* मध्य *is left out; but when both brilliance and saturation be medium, one* मध्य *serves for both.*

3. *Prefixes for brilliance begin with consonants, those for saturation (excepting* मध्य*) begin with vowels.*

4. *Prefixes for brilliance end in vowels, which naturally coalesce with the following vowel initials of saturation prefixes. That effects an economy of one syllable.*

cameo green (yellow-green, saturation low, brilliance high) प्राव-पीत-हरि.

Dresden blue (blue, sat. medium, bril. medium) मध्य-नील.

moss grey (yellow, sat. low, bril. medium) अव-पीत.

murrey (red, sat. high, bril. low) न्युद्-रक्त.

pyrethrum yellow (yellow, sat. medium, bril. high) प्र-पीत.

FURTHER SUBDIVISIONS

HUES

Ordinarily it suffices to have five grades between any two hues. When, however, two colours of the same hue have to be distinguished, one higher than another, a further subdivision becomes necessary. The diminutive suffix -क has been utilised to mark a lighter hue.

SATURATION

आ 'slight' has been used to mark the intermediate grades:

　अपा
अव
　अवा
मध्य
　उदा
उद्
　अध्या
अधि

BRILLIANCE

Here also आ is similarly used:

वि
　व्या
नि
　न्या
मध्य
　आप्र
प्र
　स्वा
सु

Note आप्र *instead of* प्रा *which would be confounded with* प्र *when it is joined on to saturation prefixes beginning with* अ *or* उ.

Example: Yellow ocher, buff and chamois, all the three are yellowish red-yellow in hue, of medium saturation and high brilliance. But yellow ocher is yellower and of higher saturation and lower brilliance than buff, while buff may be described as redder and of lower saturation and higher brilliance than yellow ocher. Buff is also redder and of higher saturation than chamois.

Yellow ocher and chamois are both रक्तातिपीत, but buff is redder पीतरक्तक. In saturation buff is medium, yellow ocher is a bit higher उद्रा, and chamois a little lower अव्रा. In brilliance, buff and chamois are high प्र, but yellow ocher is slightly lower आंप्र. Thus yellow ocher is आप्रोद्रा-रक्तातिपीत, buff is प्रपीतरक्तक and chamois प्रावारक्तातिपीत.

Hereafter follow tables of the four primary and twenty intermediary hues registering Indian names of all their shades, i. e. five grades of saturation and five grades of brilliance.

Each square shows Indian names. English names are not available for every one of them. That demonstrates the superiority of a system of scientific nomenclature to an arbitrary one.

For many of the colours, English has a confusing multiplicity of names. Only one is put within a square. Others are given below the tables.

रागिन्, लिखितृ painter.
लिपिकर, लेपकर white-washer.
वर्णकृत् causing or giving colour.
वर्णचारक, वर्णाट, वर्णिन् a painter.
सुधाकार whitewasher.

PAINTING OR DYEING APPARATUS

कूची a paint brush.
कूर्चक, कूर्चिका, चित्रतूलिका, चित्रलेखनिका, चित्रवर्तिका, तूलिका, लेख्यचूर्णिका a painter's brush, paint brush.
दूषिका pencil or paint brush.
नीलीभाण्ड, नीलपचनभाण्ड an indigo vat.
नील-सन्धान-भाण्ड a vat for the mixing, i.e. preparing of indigo.
वर्णकूपिका any vessel containing colour or paint, an ink-bottle, ink-stand.
वर्णतूलि, वर्णतूलिका, वर्णतूली 'letter-brush', a pen, pencil, paint-brush.
वर्णपत्र colour-leaf, a pallet.
वर्णपात्र 'colour-vessel or receptacle', a paint-box.
वर्णिका a pencil or brush for painting or writing.
वर्णकदण्डक a stick used in painting.

CHEMISTRY

Nāgārjuna is our first known alchemist whose work has survived to the present day. He belongs to the same age which produced the famous non-rusting iron pillar of Delhi bearing the inscription of an unidentified king Candra (the carbon content of iron is 0.5 per cent). In his work Nāgārjuna covers the whole gamut of ancient alchemic processes. He describes different types of crucibles and stills, cupellation, sublimation, colouring and alloying of metals, extraction of copper from pyrites, use of metal oxides as medicines, etc., etc.

The earliest datable account of Nāgārjuna is given by Kumārajīva in 405A.D. Strange as it may seem, it is preserved in China and not in India. According to him, Nāgārjuna was born under the Arjuna tree, whence the second part of his name. His instructions he obtained from the Nāgas. Hence the name Nāgārjuna. Literally nāga *means a serpent. In the accompanying portrait one can see the heads of no less than five serpents emerging from behind the halo which forms the background of the head.*

In Chinese he is known as Lung-Shu *or* Lung-Meng. *The Chinese traveller I-Tsing places Nāgārjuna in the first century A.D. as the contemporary of king Kanishka, both of whom are said to have appeared four hundred years after the Nirvāṇa of Buddha. Other Chinese sources of information are Guṇabhadra, Bodhiruci and Śikṣānanda.*

Long accounts of Nāgārjuna are available in Tibetan literature. There he is shrouded in legend and mystery. As a sorcerer he is glorified in Grub-thob brgyad-cu-rtsa-bshiḥi rnam-thar and dpag-bsam-Gon-bzan of Sum-pa mkhan-po ye-ces dpal-ḥbyor. According to these he was born in the land of Vidarbha (modern Berar) as the son of a wealthy Brahmin who had remained childless for many years. At an early age, at the suggestion of the High Priest Shri Saraha Bhadra of the University of Nalendra in Magadha, he entered the Buddhist order and specialised in all the sciences of his day. After the death of Saraha Bhadra he became the President of the University. Under him the University flourished to such an extent that it obscured the splendour of Vajrāsana, namely Buddha Gaya. Several kings came under his influence.

The Tibetan tradition has preserved the name of his teacher, Rāhula, while Hiuen-Tsiang mentions one of his pupils, Āryadeva. Nāgārjuna's great fame in Buddhist literature rests on his being one of the founders of Mahāyāna system of thought, which spread soon after him into Tibet, China, Mongolia, Korea and Japan.

Nāgārjuna is the discoverer of several eye medicines and of the elixir of life which strengthens the weakening forces of men in old age and prolongs life and happiness. He rescued starving humanity from famines by exchanging gold for grain in far off lands. The Tibetan historian Tārānātha records that Nāgārjuna had strong dykes built to save Buddha Gaya from inundations.

Nāgārjuna is also the discoverer of several gold mines in South India.

The portrait on the opposite page is from a Tibetan original in Tashi Lumpo Monastery. The work of reproduction in colour was undertaken by the Tibetan artist Dge-hdun-chos-phel and Phanindra Mookerjea for the late Shri R. S. Pandit. The copper plates were very kindly lent to me by Shrimati Vijaya Lakshmi Pandit. The portrait represents peace and plenty, power and serenity as the rewards of knowledge of the world in its material and spiritual aspects. Here is the maxim of Nāgārjuna:

"As long as the science of chemistry prevails, let hunger, pain and poverty not torment men."

Elements are the ultimate constituents of matter. In ancient times matter was considered to be constituted of five elements—earth, air, fire, water and sky. This division of the material world was intended to correspond with the sense—organs of smell, touch, sight, taste and hearing respectively. Now when we start teaching chemistry, the पञ्चतत्त्व or पञ्चभूत have to give place to ninty-two तत्त्वs. Of these, several were known to the ancients, namely, antimony, iron, copper, tin, arsenic, mercury, silver, sulphur, lead and gold. There are 17 other names which are very well represented like carbon by प्रांगार, sodium by क्षारातु, calcium by चूर्णातु, etc., etc. स्फटी alum yields स्फट्यातु aluminium. For oxygen we have जारक. We have perfect Sanskrit counterparts of words like hydrogen and phosphorus in उद्‌जन and भास्वर respectively. Instead of calling the substance by its Greek name bromine which means 'bad smelling', we call it by its Indian name दुराघ्री. The rest which are new names are based on some distinctive characteristic of the element. The Indian names have the advantage of being words of the soil and are capable of being understood.

The name of every element begins with a distinct syllable. Thereby we have succeeded in having a single graphic unit as a symbol of each element. In the European system it is not possible. They have had recourse to two graphic units as symbols in the majority of cases.

Element-names are of very great importance for the development of our languages as vehicles of scientific thought. Chemical elements are of universal application. In pharmacy their domination is absolute. Medicines deserve to be better known and better understood. That can only be achieved by Indian words and not by foreign words.

Names of minerals are more than a thousand. In the English language these names are just mouth-filling syllables mostly devoid of significance. With Indian names of elements, we have been able to name the minerals according to their chemical constituents. Thus, every name carries within it the indication of the chief elements of which it is composed.

In the notes that follow the name of each element, we have compiled sufficient linguistic material from the different Indian and allied languages to show as to how the new words are deeply rooted in the Indian soil.

I

The following names are in use in India since ancient times :

अंजन stibium.

It is an all-India word: Hindi, Panjabi, Nepali, Bengali, Marathi, Gujarati, Oriya, Kannada अञ्जन; Malayalam, Tamil अञ्जनम्; Telugu अंजनमु.

अयस् ferrum.

अयस् is the forefather of Latin *aes*, German *Eisen*, English *iron* and scores of other words in ancient and modern European languages. English *ore* is also akin to अयस्. It is used in high literature in North India, particularly in Hindi and Bengali. In South India its use is commoner: Malayalam, Telugu अयस्सु; Kannada अयस्; Tamil अयशु.

ताम्र cuprum.

It is an all-India word: Kashmiri, Shina त्राम्; Kumaoni तामो; Nepali ताम्र, तामो; Assamese ताम्; Bengali ताम्र, तामा; Oriya ताम्र, तम्बा; Hindi ताम्र, तांबा; Panjabi ताम्बा; Sindhi ट्रामो; Gujarati त्रांबुं, तांबुं, ताम्र; Marathi तांबें, ताम्र; Malayalam ताम्रकं, ताम्रं; Kannada ताम्र, ताम्रं; Telugu ताम्रमु; Tamil तामिरम्, ताम्बिरम्; Singhalese तम्ब.

त्रपु stannum.

Like अयस्, ताम्र, रजत and सीस, त्रपु is as old as the Veda. It is derived from √ त्रप् to be shy, on account of its low melting point. It is still used in South India : Malayalam and Kannada त्रपु; Telugu त्रपुवु.

नेपाली arsenic.

नेपाली or Suśruta's नेपालज is a most important word for a historical economic geography of the world in general and India in particular. नेपाली or नेपालज 'produced in Nepal' is originally red arsenic, which is one of the chief sources of the element arsenic. We have specialized the word for arsenic, the element. For arsenic trioxide, which is a deadly poison, the modern languages of India use more than one word, and in common, non-scientific usage these can be retained.

पारद hydrargyrum.

पारद is an all-India word: Panjabi पारा; Bengali, Oriya, Hindi, Marathi पारद, पारा; Sindhi, Nepali पारो; Gujarati पारद, पारो; Malayalam पारतम्; Kannada पारद; Telugu पारदमु; Tamil पारदम्.

रजत argentum.

From रजत are derived Greek *argyros*, Latin *argentum*, Old Irish *argat*, etc. रजत is still widely used in India, although there are other words as well. Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada रजत; Malayalam रजतं; Telugu रजतमु; Tamil इरशिदम्.

शुल्बारि sulphur.

शुल्बारि is the parent of Latin *sulphur, sulpur, sulfur*. This word has been borrowed from Latin by European languages. It is only in Sanskrit that it has a significance 'enemy of copper'.

Another common word for sulphur in India is गन्ध, गन्धक. In our terminology we have used गन्ध for thio and for its derivatives and compounds.

सीस plumbum.

सीस is an all-India word: Nepali सिसो; Kumaoni सीसो; Bengali सीस, सिसा; Oriya सीसा, सीसक; Hindi सीस, सीसा; Panjabi सीसा; Sindhi सीहो; Gujarati सीसुं; Marathi शिसें; Malayalam सीसं, सीसकं; Kannada सीस; Telugu सीसमु; Tamil शीशम्.

स्वर्ण aurum.

स्वर्ण is an all-India word: Kashmiri स्वन्; Western Pahari (Bhadrawahi) सुन्नो; Kumaoni सुनो; Bengali, Hindi स्वर्ण, सोना; Oriya सुवर्ण्ण, सुना; Panjabi, Lahndi सोना; Sindhi सोनु; Gujarati सुवर्ण, सोनुँ; Marathi सुवर्ण, सोनें; Malayalam स्वर्ण्णं; Kannada स्वर्णं; Telugu स्वर्णमु; Tamil शुवर्णम्, शोन्नम्; Singhalese सुवन्.

II

Fourteen ancient names of substances have been made the basis of forming such element names as are closely connected therewith:

अंगार (charcoal) **yields प्रांगार** [प्र उत्कर्ष] **carbon** [from Latin *carbo* coal, charcoal].

Cf. German *Kohlen-stoff*, Russian *ugle-rod*, Finnish *hiili*, Bengali विशुद्ध अंगार, Kannada and Malayalam अंगार, इंगाल. Similarly Japanese 炭素 *tan-so* charcoal-pure. It would not be out of place here to point out that Lithuanian *angli-s*, Russian *ugolj*, German *Kohle*, English *coal*, etc., are genetically related to Sanskrit अंगार.

अंगार is an all-India word: Kafiri (Ashkun) अङा; Dardic (Khovar) अङ्गार्, (Torwali) अङ्गा; Shina अङ्गार्; Nepali अङ्गार; Hindi, Bengali, Oriya, Kannada अङ्गार; Panjabi अंगार्; Sindhi अङरु; Gujarati अंगार, अंगारो; Marathi अंगार, अंगारा; Malayalam, Tamil अंगारम्; Telugu अङ्गारमु; Singhalese अंगुरु.

कुप्य (base metal, zinc) **yields कुप्यातु** [कुप्य + धातु] [from German Zink, of unknown origin].

Cf. 亜鉛 Japanese *a-en*, next-to-lead. कुप्य is **zinc** used in High Bengali, Kannada and Malayalam.

क्षार (soda) **yields क्षारातु** [क्षार+धातु] **sodium** [New Latin, from *soda*].

The word क्षार is universally used in India, both in its pure form as well as in a slightly modified form: Sindhi खारु; Kashmiri, Panjabi, Lahndi, Assamese, etc. खार; Hindi, Nepali, Gujarati, Marathi, Oriya क्षार, खार; Bengali क्षार; Kannada क्षार, कार; Tamil कारम्; Telugu क्षारमु, कारमु; Malayalam कारं, क्षारं; European Gypsy छार् 'ashes'.

गोमेद (zircon) **yields गोमेदातु** [गोमेद+धातु] **zirconium** [from *zircon*].

गोमेद is an all-India word: Hindi, Bengali, Gujarati गोमेद; Malayalam, Tamil गोमेदकम्; Kannada गोमेदक; Telugu गोमेधिकमु.

Hafnium resembles the previous element, zirconium, closely and is hence named **गावातु** [गाव from गो(मेद) related to go(meda) +धातु].

चूर्ण (calcis, lime) **yields चूर्णातु** [चूर्ण+धातु] **calcium** [Latin *calx, calcis* lime].

Almost all languages of India and Ceylon, from Dardic in the extreme North-West up to Singhalese in Ceylon, derive their words for lime from Sanskrit चूर्ण, e.g., Hindi, Panjabi, Lahndi चूना; Nepali चुन्; Bengali चूर्ण, चुन; Marathi चूर्ण, चुना; Sindhi चुनु; Gujarati चुनो; Assamese सुन्; Oriya चूर्ण्ण, चून; Telugu सुन्नमु; Kannada चूर्णं, सुण्ण; Tamil शुण्णाम्बु, शुण्णम्; Malayalam चूर्ण्णं; Singhalese हुणु.

टंकण (borax) **yields टांकण boron** [from *borax*].

Cf. 硼素 Japanese *ho-so*, borax-pure.

टंकण is widely used. It is also called टंक or टंकणक्षार. Hindi, Kannada टंकण; Bengali टंकण, टंक; Gujarati टंकण-खार; Marathi टंकण, टांकणखार; Sindhi कंगड-कारु (cf. Sanskrit टंगर); Malayalam टंकणं; Telugu टंकणमु. Borax was exported

from India to far-off lands in the East as well as in the West. In the Malay Peninsula it is still called *tingkal.* Persian and Arabic show *tankar, tinkar, al-tinkar.* The word reached England as early as 1635 A.D., when it is found spelt *tyncall*; other spellings of the word are *tinkal, tincal, tinkar, tincar.*

रूप (silver) **yields रूपक** [nickel being nearly silver-white] **nickel** [abbreviated from German *Kupfer-nickel* copper-demon].

रूप or रूप्य is an all-India word: European Gypsy, Shina, Assamese रुप्; Dardic (Kalasha) रूव्र, (Gawarbati) रुप्; Kashmiri र्वैफ्; Western Pahari (Poguli) रूप्प्; Bengali रूप्य, रुपा, रूपा, रौप्य; Oriya रुपा; Hindi रूप; Panjabi रुंपा; Sindhi रुपो; Gujarati रूपुं; Marathi रुपें, रूप्य; Kannada रूप्य; Malayalam रूप्यं; Telugu रूप्यमु; Tamil उरूप्पियम्. It is well-known through 'rupee' the silver coin of India.

लवण (salt) **yields लावणी** [लावण related to salt + -ई -ine; a rare element related to the halogens, halo- 'salt' लवण-] **alabamine** [from *Alabama,* a State in U. S. A. + *-ine*].

लवण is one of the commonest Indian words: European and Syrian Gypsy लोन्; Armenian Gypsy नोल्; Dardic (Tirahi, Pashai, Kalasha) लोन्; Kashmiri नून्; Western Pahari (Cameali) लुण्; Kumaoni नूण्; Nepali, Bengali लवण, नुन्; Oriya लवण, लुण, नुण; Hindi लवण, लोन्, लून्, नोन्, नून्; Panjabi लूण्, नूण्; Sindhi लूणु; Gujarati लवण, लुण; Marathi, Kannada लवण; Malayalam लवणं; Telugu लवणमु; Tamil इलवणम्; Singhalese लुणु.

लोह (iron) **yields लोहक** [so named on account of its resemblance to iron] **manganese** [from Italian *manganese* corrupted from Mid-Latin *magnesia,* from Greek *he Magnesia lithos,* properly the stone of the city of Magnesia, loadstone].

लोह is an all-India word: Nepali, Western Pahari (Curahi, Bhateali, Cameali), Panjabi, Lahndi लोहा; Kumaoni लुवा; Assamese लो; Bengali, Hindi लोह, लोहा; Oriya लौह, लुहा; Sindhi लोहु; Gujarati, Marathi लोह; Malayalam लोहं; Kannada लोह; Telugu लोहमु; Tamil उलोगम् 'metal'; Singhalese लोहो, लो 'metal'.

वंग (tin) **yields वंगक** [being of tin-white metallic lustre] **tellurium** [from Latin *telluris* the earth].

वंग is used in Hindi, Bengali, Marathi, Oriya, Kannada, Telugu (वंगमु), Tamil and Malayalam (वंगम्). The English word *bangle* is Hindi *bangri* which is from वंग.

वैडूर्य (beryl) **yields विडूर beryllium** [from beryl].

वैडूर्य is also called वैदूर्य, विडूरज, विदूरज—विडूरे भवं = वैडूर्यं, विडूरे जायते = विडूरजं. वैडूर्य 'beryl' is a silicate of beryllium and aluminium $Be_3Al_3(SiO_3)_6$ वि$_3$स्फ$_3$(सै ज$_3$)$_6$.

वैडूर्य, Prakrit वेलूरिय has been borrowed from India by the major cultural languages of the world: Chinese *pi-liu-li* (abbreviated *pi-liu* or *liu-li*), Arabic and Persian *bullur*, Greek *berullos*, Latin *beryllus*, Old French *beryl, beril*, English *beryl*. Cf. D. Junius Juvenalis, a Latin poet of the 1st cent. A.D.: "A precious stone, of a sea-green colour, *found in India.*" In China, Persia, Arabia the word was applied also to crystal, whence Mediaeval Latin *berillus* 'an eyeglass or spectacles', whence German *Brille* and Dutch *bril* 'spectacles'. English *brilliant* and *brilliance* are from the same source.

वैडूर्य being the name of a precious stone is used in high literature more than in the common language: Hindi, Bengali, Oriya वैडूर्य; Malayalam वैडूर्यं; Kannada, Marathi वैडूर्य; Telugu वैडूर्यमु; Tamil वैडूरियम्.

सिकता (sand) **yields सैकता** [सैकत related to sand + -आ -on; sand is impure silica] **silicon** [from Latin *silicis* a flint].

Silicon is also known as silicium (German *Silizium*), though it is a non-metallic element. Germans have their own name also *Kiesel-stoff* (*Kiesel-erde* silica), while the Russians call it *kremnij.*

सिकता is used in Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada (सिकत, सिकते), Malayalam and Telugu (सिकत).

सिकता (sand) **also yields सिकातु** [सिकता + धातु; it resembles silicon in some respects, and was formerly termed *eka-silicon*] **germanium** [from Latin *Germania* Germany].

सिक्ष्य (glass or crystal) **yields सिक्ष्यातु** [सिक्ष्य + धातु it is crystalline in structure. Its salts are used in making highly refractive glass] **thallium** [from Greek *thallos* a young shoot].

स्फटी (alum) **yields स्फट्यातु** [स्फटी + धातु] **aluminium** [from Latin *alumen* alum].

स्फटी, स्फटिका, स्फटिकारि are all used as synonyms and denote 'alum'. They are used all over India: Nepali फड्किरि; Bengali स्फटिक, फटिक; Hindi स्फटी, फट्करी, फिट्किरी Panjabi फट्करी; Gujarati फट्कडी; Marathi स्फटी, फटकी; Oriya

स्फटिकारि, Malayalam स्फटिकं; Kannada स्फटिके; Telugu स्फटिक.

III

जारण signifying 'oxidizing of metals' has been used in the Indian alchemic literature. Hence has been derived our word for oxygen जारक. The common Hindi word for rust जर and जरना 'to rust', are from the Sanskrit √ जॄ, जरण, जारण.

Oxygen is adapted from French *oxygène*, intended to mean 'acidifying (principle),' *principe acidifiant* (Lavoisier). It is derived from Greek *oxus* sharp + *-gen* producing. Lavoisier's original term, proposed in 1777, was *principe oxygine*, changed 1785-6 to *principe oxygène;* thence in 1786 *oxygène* as substantive, spelt in *Nomenclature* of 1787 *oxigéne;* admitted in *Dict. Acad.* 1835 as *oxygène.* Lavoisier held it to be the essential principle in the formation of acids. This idea has been followed up in Japanese 酸素 *san-so* acid-pure, German *Sauerstoff* and Russian *kislo-rod.* Soon after it was felt that oxygen was not an appropriate term: "Opponents particularly object, that the base of vital air does not deserve the title of oxygen, as many combinations of it are far from being acids." Med. Jrnl. I. 373 (year 1799).

IV

Hydro-gen appears in our terminology in its Indian form उद-जन.

Greek *hudro,* Latin *unda,* English *wet, water,* German *Wasser,* Russian *voda,* and similar words in European languages are from Sanskrit √उद्, √उन्द्, उद. Greek *-genes* born, is Sanskrit √जन्. Hydrogen is so called because water is generated by its combustion. Cf. German *Wasser-stoff,* Russian *vodo-rod,* Japanese 水素 *sui-so* water-pure.

उद् or उदक is an all-India word: Dardic (Tirahi) उवा. (Kalasha) उक्, (Garvi, Torwali) ऊ; Hindi, Marathi उदक; Bengali, Gujarati उद, उदक; Tamil उदम्; Malayalam उदकम्; Telugu उदकमु; Kannada, Singhalese उद.

Phos-phorus is again a Greek word which has its exact literary equivalent in Indian भास्वर. Greek *phos* is Sanskrit भास् 'light' and *-phorus* is Sanskrit -भर (to which is also akin English *bear*). Thus भास्-भर would be the exact counterpart, but भास्वर is better sounding, yields the same sense and has been in use since times immemorial. The Telugu people have already used it (भास्वरमु) for phosphorus (vide P. Shankaranarayana, An English-Telugu Dictionary, Madras, 1928).

भास्वर 'shining, bright' is an all-India word: Hindi, Marathi, Bengali, Oriya भास्वर; Malayalam भासुरं; Telugu भास्वरमु.

V

Five other words of Greek extraction, argon, bromine, chromium, iodine and krypton, have been allowed to retain their original connotation in Indian words:

Argon [Greek *argon,* neuter of *argos* inactive, from *a-* not + *ergon* work]—**मन्दाति** [मन्द slow, indifferent + वाति gas].

So named on account of its inertness. No compounds of it are known.

मन्द is an all-India word: Kashmiri मोन्दु; Hindi मन्द, मांद; Sindhi मन्द्रो; Bengali, Gujarati, Marathi, Oriya, Kannada मन्द; Tamil, Malayalam मन्दम्; Telugu मंदमु; Singhalese मन्द 'small'.

Bromine [from Greek *bromos* bad smell + *-ine*]—**दुराघ्री** [दुर् bad + आ √ घ्रा to smell at + -ई -ine].

Bromine emits an irritating vapour of disagreeable odour. Cf. Japanese 臭素 *shu-so* stench-pure.

Chromium [from Greek *chroma* colour]—**वर्णातु** [वर्ण colour + धातु].

So called from the varied colours of its compounds.

वर्ण is an all-India word: Hindi, Bengali, Gujarati, Marathi, Kannada वर्ण; Oriya बर्ण्ण; Tamil वरुणम्; Telugu वर्णमु; Malayalam वण्णं.

Iodine [from Greek *iodes* violet-like + *-ine*]—**जंबुकी** [जम्बुक having the colour of the rose-apple fruit + -ई -ine].

So called from the colour of its vapour.

जम्बु is an all-India word: Hindi जम्बु, जामुन; Nepali जामु; Assamese ज़ामु; Bengali जम्बु, जाम; Oriya जम्बु, जामु; Panjabi जम्मू; Sindhi जामूँ; Gujarati जंबु, जांबु; Marathi जंबु, जांब; Tamil, Kannada, Malayalam जम्बु; Telugu जम्बुवु; Singhalese दम्ब.

Krypton [Greek *krupton,* neuter of *kruptos* hidden]—**लीनाति** [लीन hidden + वाति gas].

It is one of the inert gases occurring in air (one volume in about a million) and in gases from hot springs.

लीन is an all-India word: Hindi, Bengali, Nepali, Gujarati, Marathi, Oriya, Kannada लीन; Telugu लीनमु; Malayalam लीनं. Tamil has the cognate इलयम्.

VI

Fluorine, indium, radium and radon are of Latin origin. Their translations are very close:

Fluorine [from Latin *fluere* to flow, whence fluorite, which is one of the sources of fluorine]—**तरस्विनी** [तरस्विन् quick, violent, energetic + -ई -ine].

Fluorine is the most active element known. It is active even at very low temperature. It cannot be prepared or kept in vessels of glass which it attacks freely.

तरस्विन् is found in several languages of India: Hindi तरस्वी; Bengali तरस्विन्; Telugu तरस्वि 'an express, a courier'; Malayalam तरस्वि 'an express, a runner', तरस्सु 'velocity, speed'; Kannada तरस्वि 'swift'.

Indium [from Latin *ind*icum 'indigo' + *-ium*]—**नैलातु** [नैल (from नीली indigo)+धातु].

It has two characteristic indigo-blue lines in its spectrum.

नीली or नील 'indigo' is an all-India word: Panjabi, Hindi, Bengali नील; Sindhi नीरु; Nepali, Assamese निल्; Oriya नील, नीली; Gujarati नील 'dark blue'; Marathi नीळ; Tamil नील्, नीलम्; Telugu, Kannada, Malayalam नीलि.

Radium [from Latin *radius* ray]—**तेजातु** [तेजस् light, energy + धातु].

तेजस् is an all-India word: Hindi, Bengali, Nepali, Gujarati, Marathi, Oriya तेज; Tamil तेशु; Kannada तेजस्; Telugu, Malayalam तेजस्सु.

Radon [*radium* + *-on,* as in *argon*]—**तैजसाति** [तैजस (from तेजस् in तेजातु radium)+वाति gas].

It is a gaseous element resembling argon but radioactive.

VII

Some names have been derived from the names of other elements, by adding prefixes to them.

Proto-actinium [from Greek *proto-* first + *actinium*]—**प्रैजातु** [प्र (as in प्रपितामह)+एजातु actinium].

It is a radio-element which by disintegration yields actinium.

Prefix प्र is used extensively in the Aryan and Dravidian languages of India and Ceylon.

The sixteen rare earth metals have been given a special suffix -ला, abridged from विरला (मृद्) 'rare (earth)'. The full form विरला has however been retained in two words:

Europium [*Europe*+*-ium*]—**किंविरला** [किं what kind of + विरला (मृद्); cf. किं-नर, किं-शुक, किं-कराल].

So named because nothing much about europium is known.

किं as the first member of a compound is found used all over India: Hindi किंकर, किंकर्तव्य-विमूढ, किंचित्, किंतु; किंपुरुष, किंवदन्ती, किंवा; Bengali किंकर्त्तव्य, किंवदन्ती, किंवा, किङ्कर, किञ्चित्, किन्तु, किन्नर, किम्पुरुष, किम्भूतकिमाकार; Marathi किं, किमर्थ, किंनिमित्त, किंकर, किंचित्, किंचिद्दान, किंचिज्ज्ञ, किंचिज्ज्ञान, किंतु, . किन्नर, किन्निमित्त, किंबहुना, किमपि, किमर्थ, किंवा; Gujarati किंवा, किङ्कर, किङ्करी, किञ्चित्, किन्तु, किन्नर, किन्नरी; Oriya किङ्कर, किङ्कर्त्तव्यविमूढ, किञ्चित्, किञ्चिन्मात्र, किन्तु, किन्नर, किम्बा; Telugu किंकरत्वमु, किंकरि, किंकरुडु, किञ्चित्तु, किंपुरुषमु, किंपुरुषुडु, किंवदंति, किन्नर, किन्नरेशुडु; Tamil किङ्करर्, किञ्चनन् or किञ्चन्, किञ्चितम् or किञ्चित्तु, किञ्चित्तुवम्, किम्पुरुडम्, किम्पुरुडखण्डम्, किम्पुरुडर्, Kannada किं, किंवदन्ति, किंवार्ते, किंकर, किंकरत्व, किंकरि, किंकरे किंकुर्वाणते, किंचन, किंचित्, किंचित्प्रौढे, किंचिद्भूतकाल, किन्नर, किन्नरपति, किन्नरि, किन्नरिक्रिये, किन्नरेश, किन्नरेश्वर, किम्पच, किम्पचान, किम्पाक, किम्पुरुष; Malayalam किङ्करन्, किङ्किरि, किञ्च, किञ्चन, किञ्चनन्, किञ्चि(त्)ल्, किन्तु, किन्देवन् 'atheist', किन्नरप्पेट्टि 'music box', किन्नरि, किन्नरेशन्, किन्नु, किं, किमपि, किमु, किमुत, किम्पचं, किम्पुरुषन्, किंवदन्ति, किंवा, किंक्षणन्.

विरल is an all-India word: Hindi विरल, विरला; Bengali, Oriya, Kannada विरल; Nepali विरल्, बिरल्; Gujarati विरल, विरलुं; Marathi विरल, विरळ; Telugu विरळमु; Malayalam विरळं.

Illinium=florentium [from *Illinois,* a university in U.S.A. + *-ium.* Similarly *florentium* is from the name of the city Florence (Latin *Florentia*)]—**पिविरला** [अपि (contracted to पि) a variety of+विरला (मृद्)].

Terbium [from Yt*terby* in Sweden]—**इद्भृशला** which is composed of इद् (indeed, a variety of, as in इद्वत्सर) and भृशला yttrium.

Molybdenum [from Greek *molubdos* lead]—**संवर्णातु** [सं similar + वर्णातु chromium].

Molybdenum is a metallic element of the chromium group.

VIII

The colour of the element, its flame (its own or of the test flame), its vapours, lines in the spectrum, its salts, oxides or compounds, has served as the basis for the following names:

A. COLOUR OF THE ELEMENT.

आपीतला [आपीत pale yellow + -ला]—**neodymium** [Greek *neo-* new + *didumos* twin + *-ium*. Didymium was formerly supposed to be an element; it has been separated into the elements neodymium and praseodymium].

It is so named from its yellow tinge.

पीत is an all-India word: Hindi, Bengali, Oriya, Gujarati, Marathi, Kannada पीत; Telugu पीतवर्णमु; Tamil, Malayalam पीतम्. Prefix आ is used all over India.

धूसरला [धूसर grey + -ला]— **samarium** (after Col. *Samarski*, a Russian mine official).

It is a pale-grey rare metallic element.

धूसर is an all-India word: Hindi धूसर, धूसरा; Bengali, Gujarati, Marathi, Oriya धूसर; Nepali धुस्रो; Assamese धुहर; Tamil तूशरम्; Telugu धूसरमु; Kannada धूसर, दूसर; Malayalam धूसरं.

B. COLOUR OF THE FLAME.

मेचाग्नि [मेच blue + अग्नि fire]—**selenium** [from Greek *selene* the moon; so called from its resemblance to *tellurium* (Latin *tellus* the earth)].

It burns in air with a bluish flame.

मेचक is a word of high literature: Hindi, Kannada मेचक; Telugu मेचकमु; Malayalam मेचकं.

अग्नि is an all-India word: European Gypsy यग; Syrian Gypsy अगि; Western Pahari (Pangwali) अग, Nepali अग्नि, आगो; Kumaoni आगो; Hindi, Gujarati, Marathi अग्नि, आग; Assamese आग; Panjabi, Lahndi अग्ग; Sindhi आगि; Bengali अग्नि, आगुन; Oriya, Malayalam अग्नि; Telugu, Kannada अग्नि, अग्गि; Singhalese अग.

शोणातु [शोण crimson + धातु]—**strontium** [from *Strontian*, in Argyll Co., Scotland].

Its compounds colour the test flame crimson.

शोण is an all-India word: Hindi, Bengali, Kannada शोण; Marathi शोणित 'blood-coloured'; Tamil, Malayalam शोणम्; Telugu शोणमु.

हर्यातु [हरि green + धातु]—**barium** [from Greek *barus* heavy].

It burns with a brilliant greenish flame when heated in air or oxygen.

हरि or हरित is an all-India word: Dardic (Kalasha) हरिलेक्; Hindi हरा, हरित; Bengali, Kannada हरि, हरित्, हरित; Panjabi हरा; Sindhi हर्यो; Gujarati हरित, हरुँ, हर्युं; Marathi हरित; Oriya हरित्; Tamil अरि; Telugu हरितमु; Malayalam हरि.

C. COLOUR OF VAPOURS.

जम्बुकी See **iodine**, p. 123b.

D. COLOUR OF LINES IN THE SPECTRUM.

नैलातु See **indium**, p. 124a.

E. COLOUR OF SALTS.

रक्तला [रक्त red + -ला]—**erbium** [from Ytt*erby* in Sweden, where gadolinite is found].

Its salts are reddish.

रक्त is an all-India word: Hindi, Marathi रक्त, राता; Kumaoni, Nepali रातो; Assamese रातुल; Panjabi, Lahndi रत्ता; Sindhi रतो; Gujarati रक्त, रातुँ; Bengali रक्त; Oriya रक्तवर्ण; Tamil इरत्तम्; Telugu रक्तमु; Kannada रक्त, रकुत; Malayalam रक्तं; Singhalese रत्.

श्यामला [श्याम green + -ला]—**praseodymium** [from Greek *prasios* of a leek-green + di*dymium* (Greek *didumos* twin)].

It is so called from the green colour of its salts.

श्याम is an all-India word: Hindi, Bengali, Nepali, Gujarati, Marathi, Oriya श्याम; Telugu श्याममु; Kannada श्याम, शाम, साम; Malayalam श्यामं; Singhalese साम्.

F. COLOUR OF OXIDES.

निर्वर्णला [निर्वर्ण colourless + -ला]—**lutecium** [from Latin *Lutetia* a town in Gaul, now Paris].

Its oxide is colourless.

Prefix निर् is used all over India. For वर्ण see वर्णातु.

पांडुला [पांडु pale-yellow + -ला]—**holmium** [from *Holmia*, Latinized form of Stockholm].

It forms a pale-yellow oxide, holmia, Ho_2O_3, and yellow or orange salts.

पाण्डु is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Tamil, Kannada, Malayalam पाण्डु; Telugu पाण्डुवु.

श्याहरिला [श्याहरि greenish + -ला]—**thulium** [from

Greek *Thule*, the northern-most part of the habitable world].

Its oxide is a greenish white powder.

The use of the prefixes वि and आ extends all over India. For हरि 'green' see हर्यातु, p.125b.

श्वेतला [श्वेत white + -ला]—**ytterbium** [from *Ytterby* in Sweden].

Its oxide is a heavy white powder.

श्वेत is an all-India word: Shina (Kohistani) श्यो; Nepali सेतो; Hindi, Bengali, Gujarati, Marathi, Oriya श्वेत; Tamil शुवेतम्; Telugu श्वेतमुखुडु 'a person with a white skin'; Kannada श्वेत, सेत; Malayalam श्वेतं; Singhalese से.

G. COLOUR OF COMPOUNDS.

वर्णातु See **chromium**, p.123b.

IX

The bases for giving names to the rest of the elements are as follows:

A. BRILLIANCE.

काशातु [काश brilliance+धातु; from its brilliant lustre]—**columbium**=**niobium** [from *Columbia*, the United States. Niobium is a later name, from Greek *Niobe*, the daughter of Tantalus and wife of Amphion, King of Thebes].

आ-काश, प्र-काश, etc. are all-India words.

रोचातु [रोच bright+धातु]—**vanadium** [from Old Norse *Vanadis*, a name of the goddess Freya].

It is a bright grey metal which appears as lustrous, silver-white crystals under the microscope.

Derivatives of √ रुच् in the senses of 'to shine, to be splendid; to be agreeable to, please' are widely used throughout India: Bashgali रुच् 'light, illumination' (Bashgali Dictionary by Sten Konow, p. 242); Hindi रुक्म or रुकुम, रुच, रुचि, रुचना, रुचा, रुचिकर, रुचिकारक, रुचित, रुचिर, रुचिराई, रोचक, रोचकता, रोचन, रोचिस्, रोचिष्णु; Bengali रुचा, रुचि, रुचिकर, रुचिर, रुच्य, रुचिकारक, रोचक, रोच्य; Gujarati रुचक, रुचिकर, रुचवुं, रुचि, रुचिर, रोचक, रोचन; Marathi रुचणें, रुचि, रुचिकर, रुचकर, रुचीक, रुचिर; Oriya रुचि, रुचिकर, रुचिबा, रुचिर, रोचक; Kannada रुक्म, रुक्मकारक 'goldsmith', रुच्, रुचक, रुचि, रुचिक, रुचिकर, रुचिकार, रुचित्व, रुचिर, रुचिसु, रुच्य, रोचक, रोचन, रोचमान, रोचि=रोचिस्, रोचिष्णु; Telugu रुक्ममु, रुचकमु, रुचि, रुचिगल, रुचिययिन, रुचिरमु, रुच्यमु, रोचनमु, रोचमानमु, रोचिष्णुवु, रोचिस्सु; Tamil उरुक्कुमम्, उरुचि; Malayalam रुक्मं or रुग्मं, रुचि, रुचिकरं, रुचिक्कुक, रुचितं, रुचिरं, रुच्यं, रोचकं, रोचनं, रोचितं, रोचस्सु or रोचिस्सु.

मृज्यातु [मृज्य polishable+धातु; √मृज् to polish]—**cadmium** [from Greek *kadmia (ge)* Cadmean (earth) + *-ium*].

Cadmium is capable of a high polish.

√ मृज् is used all over India: Hindi माँजना, मार्जन; Bengali माज्जन, माजा; Gujarati मार्जन, माजवुं, मांजवुं; Nepali माज्नु, माँज्नु; Oriya मार्ज्जन, माज्जना, माजिबा; Panjabi माँज्णा, Sindhi माञणु; Marathi, Kannada मार्जन; Tamil मार्च्चनम्; Telugu मार्जनमु; Malayalam मार्ज्जनं; Singhalese मदिनु 'to polish'.

भ्राजातु [√भ्राज् to shine + धातु]—**magnesium** [from Greek *he Magnesia lithos*, properly the stone of the city of Magnesia, loadstone+*-ium*].

It burns with the production of a dazzling strongly actinic light (magnesium light).

√ भ्राज् is a word of high literature: Hindi भ्राजमान; Telugu भ्राजितमु; Kannada भ्राज्, भ्राजि; Malayalam भ्राजिष्णु.

B. BURNING.

दहातु [√ दह् to burn+धातु]—**potassium** [from French *potasse*+*-ium*].

It oxidizes rapidly in air, and is hence kept under kerosene or other hydrocarbon liquid.

√ दह् or दहन is an all-India word: Hindi दहन, दहना; Bengali दहन, दहा; Assamese दहिब; Oriya दहन, दहिबा; Panjabi दहिणा; Sindhi डहणु; Gujarati दहवुं, दहन; Marathi दहन, दाहणें; Tamil तगम्; Telugu दहनमु; Kannada दहन; Malayalam दहनं; Singhalese दहन्.

दीपातु [√दीप् to blaze, to flare+धातु]—**rubidium** [from Latin *rubidus* red; so named from its two prominent red lines].

It inflames spontaneously in air.

Derivatives of √दीप् are used all over India: Hindi दीप, दीपक, दीपना, दीपित, दीप्त; Bengali दीप 'lamp', दीपक, दीपन, दीपित, दीप्त, दीप्ति, दीप्यमान; Gujarati दीप or दीपक 'a lamp, a light, kindling, inflaming', दीपवुं or दीपावुं or दिपवुं 'to shine', दीपिका 'a lampstand, a small lamp', दीप्त 'kindled, blazing, luminous', दीप्ति 'light, brilliancy, illumination'; Marathi दीप 'lamp', दीप्त 'kindled, blazing', दीप्ति 'light, lustre'; Oriya दीप 'lamp', दीपिका 'a lamp, a light', दीप्ति 'light, brilliancy'; Tamil दीपकम् or दीवकम् 'lighted lamp, luminousness', दीपम् 'a lamp'; Telugu दीपकमु 'kindling, inflaming, illuminating', दीपमु 'a light, lamp', दीप्तमु 'lighted, illuminated', दीप्ति 'light, lustre, brilliance'; Kannada दीप or दीव 'a lamp, a light', दीपक 'kindling, illuminating',

दीपन 'kindling', दीप्त 'inflamed, kindled, blazing, radiant', दीप्ति 'brilliancy', दीप्त 'shining, brilliant, luminous'; Malayalam दीपकं, दीपं 'a lamp', दीपिक 'a lamp', दीपिक्कुक 'to shine, to blaze', दीपितं 'lighted', दीप्तं 'radiant', दीप्ति 'blaze, brilliancy', दीप्यमानं 'shining'.

C. MELTING.

चण्डातु [चण्ड fierce, said of fire or sun + धातु]—**tungsten** [from Swedish *tung* heavy + *sten* stone].

It has the highest melting point of any of the metals (melting at about 3370°C.).

चण्ड is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada चण्ड; Tamil चण्डम्; Telugu चण्डमु.

द्रवातु [द्रव melting + धातु]—**gallium** [probably from Latin *Gallia* Gaul, France].

It is remarkable for its low melting point (29.7° C.).

द्रव is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada द्रव; Tamil तिरवम्; Telugu द्रवमु; Malayalam द्रवं.

D. OXIDIZATION.

जारक See जारण, p. 123a.

सुजारला [सु easy + जारण oxidization + -*ला*] — **lanthanum** [from Greek *lanthanein* to be concealed].

Metallic lanthanum is easily oxidizable.

सु is an all-India prefix.

E. RESISTANCE TO ACIDS.

सहातु [√सह् to resist + धातु; from its high resistance to acids]—**tantalum** [from Greek mythology *Tantalos* a king; in reference to difficulties met in isolating it].

√सह् is used all over India: Kashmiri सहुन्; Kumaoni सहणो; Hindi सहन, सहना; Bengali सहन, सहा; Oriya सहन, सहिबा; Panjabi सहिणा; Sindhi सहणु; Gujarati सहन, सहवुं; Marathi सहन, साहणें; Tamil शगनम्; Telugu सहनमु; Kannada सह, सहन; Malayalam सह.

F. INSOLUBILITY IN ACIDS.

नक्षरातु [न not + √क्षर् to melt, to solve + धातु]—**ruthenium** [from Mid-Latin *Ruthenia* Russia].

Ruthenium is very infusible and almost insoluble in acids.

न is an all-India word; European, Armenian and Syrian Gypsy, Kafiri (Ashkun), Dardic (Tirahi, Pashai, Garvi, Torwali), Shina (Kohistani), Hindi, Bengali, Gujarati, Marathi, Kumaoni, Assamese, Oriya, Sindhi, Tamil, Kannada न; Kashmiri, Panjabi, Lahndi, Marathi, Singhalese ना.

√क्षर् is widely used: Hindi, Bengali, Oriya क्षरण; Marathi क्षर, क्षरणें; Gujarati, Kannada क्षर; Malayalam क्षरणं. The root is still better known through the word अ-क्षर.

नाम्लातु [न not + अम्ल (क्षरण) acid (dissolving) + धातु]—**rhodium** [from Greek *rhodon* rose].

It is insoluble in acids.

अम्ल is an all-India word: Hindi, Bengali, Marathi, Oriya, Kannada अम्ल; Nepali अमिलो; Telugu अम्लमु; Malayalam अम्लं.

G. NOBILITY.

महातु [महा great, noble + धातु]—**platinum** [from Spanish *platina*, from *plata* silver, originally a thin plate of metal].

Platinum is the best among the noble metals. Cf. 白金 Japanese *hak-kin* white-metal.

महा is one of the commonest words in India, either as the first member of a compound or as an independent word: Hindi, Bengali, Gujarati, Marathi, Nepali, Oriya, Tamil, Malayalam महा; Telugu महा (in compounds only, e.g., महाधनमु gold, महा-देवि, महा-जन); Kannada महा, मा.

H. ELECTROPOSITIVITY.

द्युतातु [(वि)द्युत् electricity + धातु]—**cesium** [from Latin *caesius* bluish grey].

It is the most electro-positive of all the elements.

विद्युत् is an all-India word: Hindi विद्युत्, बिजुली, बिजली; Bengali विद्युत्, बिजली, बिजुरि; Nepali विद्युत्, बिजुलि; Assamese बिज़ुलि; Oriya विद्युत्, बिजुलि; Panjabi बिज्ज, बिज्ली; Lahndi विज्ज्, विज्ली; Sindhi विजु; Gujarati विद्युत्, वीज, विजळी; Marathi विद्युत्, वीज; Telugu, Malayalam विद्युत्त; Kannada विद्युत्, विद्युत्त; Singhalese विदु, विदुलिय.

I. MAGNETIC QUALITY.

चुम्बला [चुम्बक a loadstone, a magnet + -ला]—**dysprosium** [from Greek *dus-prositos* hard to get at].

It is the most magnetic substance known.

चुम्बक is an all-India word: Hindi, Bengali, Gujarati, Marathi, Nepali, Oriya, Kannada, Malayalam चुम्बक; Tamil चुम्बकम्.

J. RADIOACTIVITY.

एजातु [from √एज् to shake, to shine + धातु]—**actinium**

[from Greek *aktinos* ray].

Actinium is a radio-active element. From it is derived proto-actinium प्रैजातु.

किरणातु [किरण ray + धातु]—**uranium** [from *Uranus* the planet].

It is a radio-active element.

किरण is an all-India word: Hindi, Bengali, Gujarati, Marathi, Nepali, Oriya, Kannada किरण; Telugu किरणमु; Tamil, Malayalam किरणम्.

तेजातु See **radium**, p. 124a.

तैजसाति **radon** = **niton** [from Latin *nitere* to shine + *-on* as in *neon*; so called because it glows in the dark] See **radon**, p. 124a.

K. DISINTEGRATION.

ह्रसातु [√ ह्रस् to diminish + धातु]—**thorium** [from Old Norse *Thorr* the god of thunder].

It has been so named from its radio-active disintegration (with the emission of alpha, beta and gamma rays).

ह्रास is an all-India word: Hindi, Bengali, Nepali, Gujarati, Marathi, Oriya, Kannada ह्रास; Malayalam ह्रासं.

L. ACTIVITY.

चेष्टातु [चेष्टा activity + धातु]—**masurium** [from *Masuria*, region in East Prussia].

It is an active element.

चेष्टा is an all-India word: Hindi, Bengali, Nepali, Gujarati, Marathi, Oriya चेष्टा; Telugu, Malayalam चेष्ट; Kannada चेष्टे.

तरस्विनी See **fluorine**, p. 124a.

M. INERTNESS.

मन्दाति See **argon**, p. 123b.

शिथिराति [शिथिर slack + वाति gas]--**neon** [from Greek *neos* new].

Neon is an inert gaseous element.

शिथिल is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada शिथिल; Telugu शिथिलमु; Malayalam शिथिलं.

N. VOLATILENESS.

बाष्पातु [बाष्प vapour + धातु]--**rhenium** [from Latin *Rhenus* the river Rhine + *-ium*].

Its oxide is volatile.

बाष्प is an all-India word: Hindi, Gujarati बाष्प, बाफ; Kumaoni, Nepali बाफ; Kashmiri बाह; Oriya बाष्प, बाम्फ; Sindhi बाफ; Marathi बाष्प, वाफ; Bengali बाष्प, भाप; Kannada बाष्प; Telugu बाष्पमु; Malayalam बाष्पं.

O. HYDROLYSIS.

तोयातु [तोय water + धातु]—**polonium** [from *Polonia* Poland; so named from the nationality of Mme. Curie].

Compounds of polonium are readily hydrolyzed.

तोय is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Kannada तोय; Tamil, Malayalam तोयम्; Telugu तोयमु.

P. OCCLUSION.

निचूषातु [नि √चूष् to suck in + धातु]— **palladium** [from the asteroid *Pallas*, from *Pallas*, the goddess].

Palladium has remarkable power of occluding (निचूषण) gases, absorbing nearly a thousand volumes of hydrogen.

Derivatives of √चूष् are used all over India: Hindi चूसना; Bengali चूषण, चोषा; Nepali चुस्नु; Kashmiri चहुन्; Kumaoni चुसणो; Assamese सोहिब; Oriya चूषिबा, चोषिबा, चोषण; Panjabi चूसणा; Sindhi चुहणु; Gujarati चुसवुं; Marathi चोष्य; Telugu चूषणमु; Malayalam चूष्यं.

Q. WEIGHT.

गुर्वातु [गुरु heavy + धातु]—**osmium** [from Greek *osme* a smell; so named in allusion to the strong odour of osmium tetroxide].

It is the heaviest substance known (specific gravity in crystalline form, 22.48).

गुरु 'heavy' is an all-India word: Dardic (Kalasha) अगूरोक; Kashmiri गोरु 'solid'; Hindi गुरु, गरु, गरुआ; Nepali गरुको, गरुणो, गरौं; Sindhi गरो; Gujarati गुरु, गर्वु; Bengali, Oriya, Marathi, Tamil, Kannada, Malayalam गुरु; Telugu गुरुवु.

घनातु [घन compact, solid, dense + धातु]—**iridium** [from Latin *iridis* the rainbow].

It is one of the heaviest substances known, its specific gravity being 22.4.

घन is an all-India word: Dardic (Kalasha) घनो, घोन, (Pashai) गण, (Tirahi) घण, गण; Kashmiri गोनु; Kumaoni घणो; Assamese, Bengali, Oriya, Kannada घन; Hindi घन, घना; Panjabi, Lahndi घणा; Sindhi घणो, Gujarati घन, घणुं; Marathi घन, घण; Tamil कनम्; Telugu घनमु; Malayalam घनं; Singhalese गन.

लघ्वातु [लघु light+धातु] —**lithium** [from Greek *lithos* stone, from its having been discovered in a mineral].

It is the lightest metal known (specific gravity 0.53). Cf. गुर्वातु [गुरु heavy+धातु] for osmium.

लघु is an all-India word: Gypsy लोको; Shina लोकु; Kashmiri लहू 'lightly', लूकु 'small'; Western Pahari लौक्का 'small'; Hindi लघु, हरुआ, हलका; Panjabi हौला; Sindhi हरिड़ो; Marathi लघु, हलु; Bengali, Oriya, Gujarati, Kannada, Malayalam लघु; Tamil इलगु 'minuteness, fineness'; Telugu लघुवु; Singhalese लुहु.

R. ABUNDANCE.

पुष्कला [पुष्कल abundant + -ला]—**cerium** [named by Berzelius in 1803 from the asteroid *Ceres* (name of the Roman goddess of growing vegetation), then just discovered (1801)].

It is the most abundant of the rare-earth group.

पुष्कल is an all-India word: Hindi, Oriya, Kannada पुष्कल; Marathi, Gujarati पुष्कळ; Tamil पुष्कळम्; Telugu पुष्कलमु; Malayalam पुष्कलं.

भूयाति [भूयस् abundant+वाति gas]—**nitrogen** [from Greek *nitro-* niter + *-gen*].

It is a gaseous element constituting 78.03 per cent of the atmosphere by volume. Cf. German *Salpeterstoff*, *Stickluft*, Russian *celutro-rod*. It is called **azote** अजीवाति (from Greek *a-* अ- not+*zoe* जीव life) by French chemists, because it is incapable of supporting life. Cf. Spanish *azoe*, Italian and Portuguese *azoto*, Japanese 窒素 *chis-so* stop-pure.

भूयस् is used in several languages of India: Bengali, Hindi, Kannada भूयस; Telugu भूयस्सु; Malayalam भूयः.

भृशला [भृश abundant + -ला]—**yttrium** [from *Ytter*by in Sweden].

It is the most abundant of the yttrium group.

भृश is a word of high literature: Hindi, Kannada भृश; Telugu भृशमु; Malayalam भृशं.

S. MINUTENESS.

कोट्याति [कोटि(तम) ten-million(th)+वाति gas]—**xenon** [Greek, neuter of *xenos* strange].

It is a gaseous element occurring in air, about one part in 170 millions by volume.

कोटि is an all-India word: Hindi, Marathi, Gujarati, Bengali, Oriya, Tamil, Telugu, Kannada, Malayalam कोटि.

क्षुद्रातु [क्षुद्र minute, tiny, trifling+धातु]—**virginium** [from the State *Virginia*].

It is reported as occurring in minute quantities in pollucite, sea-water, etc.

क्षुद्र occurs widely: European Gypsy खुर्दो; Assamese खुद्, खुदिया; Oriya क्षुद्र, खुदर; Hindi, Bengali, Nepali, Gujarati, Marathi, Kannada क्षुद्र; Telugu क्षुद्रमु; Malayalam क्षुद्रं; Singhalese कुडा, कुदु.

स्तोकातु [स्तोक little+धातु]—**scandium** [from Latin *Scandia* Scandinavia+*-ium*].

It is sparsely (though widely) distributed in association with the rare-earth metals.

स्तोक and its descendants are widely distributed: Hindi, Bengali, Oriya स्तोक, थोड़ा; Panjabi थोड़ा; Nepali थोर्; Western Pahari (Bhadrawahi) थोड़ो, (Pangwali, Curahi) थोड़ा; Kumaoni थ्वाड़ा; Gujarati थोडुं; Marathi थोडें; Lahndi थोला; Sindhi थोरो; Telugu स्तोकमु; Kannada स्तोक; Malayalam स्तोकं.

T. BRITTLENESS.

भिदातु [√भिद् to break (भिदुर brittle)+धातु]—**bismuth** [German *bismuth, wismut*, of unknown origin].

It is a brittle metal. Cf. Japanese 蒼鉛 *so-en* grey lead.

Derivatives of √भिद् are used all over India: Hindi भिदना, भेद; Bengali भेदन; Gujarati भेद, भेदवुं; Marathi भेद; भेदणें; Oriya भेदन; Telugu भेदनमु; Kannada भिद्, भेदन; Malayalam भेदनं.

U. SPECIAL SOURCE.

केत्वातु [केतु meteor+धातु]—**cobalt** [German *Kobalt* goblin].

Cobalt occurs native in meteoric iron.

केतु is an all-India word: Hindi, Bengali, Gujarati, Marathi, Oriya, Tamil, Kannada, Malayalam केतु; Telugu केतुवु.

V. SPECIAL USAGE.

नीरजी [निर् depriving of (changed to नी before the following र)+√रज् to colour + -ई -ine]—**chlorine** [from Greek *chloros* pale-green + *-ine*].

It is used as a powerful bleaching agent. Cf. Japanese 鹽素 *en-so* salt-pure.

निर् is an all-India prefix. For √रज् (= √रञ्ज्) see रंजातु, p. 131a.

रंजातु [रंज colour + धातु]—**titanium** [from Greek *Titanes* the sons of earth].

Its compounds are used as pigments, mordants, dyes, etc.

Derivatives of √ रंज् (e.g. रंग, रंजक, रंजन) are used all over India: Hindi रंग, रंजक, रंजित; Bengali रङ्ग, रं, रञ्जक, रञ्जन, रञ्जित; Gujarati रंग, रंगवुं; Marathi रंग, रंगणें; Oriya रङ्ग, रङ्गा; Telugu रंगमु, रंगु, रंजकमु, रंजनमु; Kannada रंग, रंगु, रंजक, रंजन, रंजित; Malayalam रंगं, रञ्जन, रञ्जनं.

Some Interesting Words of Indian Origin

There are scores of words used commonly in chemistry of which origins can be traced back to Indian sources. Some of these were names of important items of Indian export in ancient times. Here are a few examples—

Anil, aniline, from Portuguese *anil*, from Arabic *al-nil*, from Sanskrit नीली indigo.

Awl आरा. Dutch *aal*, German *Ahle*, Lithuanian *yla*.

Bottom बुध्न. Dutch *bodem*, German *Boden*, Latin *fundus*, Greek *puthmen*.

Corundum is Tamil *kurundam* from Sanskrit कुरुविन्द.

Flat, plate पृथु. Greek *platus*, German *platt*.

Hone शाण.

Ion is from Greek *ion*, from *ienai* to go. It is the same as Sanskrit अयन, from the root इ to go.

Orange. In Old French *orenge*, from earlier (*n*)*aranja* (with loss of initial *n* due to confusion with indefinite article); *naranja* in Spanish, *nāranj* in Arabic, *nārang* in Persian and ultimately नारंग in Sanskrit.

Primus परम. Primus is the Latin superlative form, just as परम is Sanskrit superlative from पर.

Saccharo- शर्करा-. Med. Latin *saccharum*, Latin *saccharon*, from Greek *sakcharon*, which is from Pali सक्खरा, from Sanskrit शर्करा. Our granulated sugar शर्करा, travelled to the West in days when Pali was the popular speech in India. English 'sugar' and allied European words are from Med. Latin *succarum* (also *zugurum*), from Arabic *sukkar*, from Persian *shakar*, from Prakrit सक्खरा, from Sanskrit शर्करा. Sacchar-, saccharate, saccharic, saccharide, saccharin, saccharoid, saccharonate, saccharonic, saccharose, sucro-, sucrose, etc., are of common use in modern scientific literature.

Sulphur शुल्बारि. The presence of the Indian word शुल्बारि in European languages in the form of Eng. *sulphur*, Germ. *Schwefel*, Fr. *soufre*, Latin *sulphur*, *sulfur*, *sulpur*, is of the utmost significance for the history of spread of Indian science.

Joseph William Mellor (1869-1938) has admitted in his Handbook of Inorganic Chemistry that the European word sulphur has been derived from Sanskrit शुल्बारि.

During the last ten centuries, when India lay low and when the priests became the custodians of Sanskrit literature, non-religious literature perished as much by negligence as by vandalism of the foreign invaders who earned the reputation of burning Sanskrit manuscripts to warm their baths. शुल्बारि has come down to us preserved in lexicons. It occurs in the अभिधानचिन्तामणि (भूमिकाण्ड, श्लोक १२३), a systematically arranged lexicon of हेमचन्द्र, the great Jain encyclopaedist. शुल्बारि (=शुल्ब +अरि) is so called because it is the enemy of copper शुल्ब. That a copper piece when kept in sulphuric acid for some time is 'eaten up' is well-known. धातुमारी and धातुवैरी also denote a similar idea.

The common word for शुल्बारि is गन्धक which has also been used, particularly in the naming of 'thio' compounds.

Another interesting word of cultural significance is अयस् the parent of Latin *aes*, Gothic *ais*, old German *er*, modern German *Eisen*, English *iron*.

Both शुल्बारि and अयस् have been given their due place of honour in the names of elements.

Tri-grip त्रि-ग्रभ. French, Latin, Greek *tri-*. For -grip compare Dutch *grijpen*, German *greifen*, Danish *gribe*, Lithuanian *graibyti*, *griebti*.

Tri-pod त्रि-पदी. English *foot*, German *Fuss*, Swedish *fot*, Danish *fod*, Latin *pes*, Greek *podos*, *pous*.

Prefixes

An- (=**a-**) 'not', used chiefly before vowels and h. It is the same as Sanskrit अ- and अन्-, e.g., anhydride अजलेय.

Anti- 'opposite, against, counter'. प्रति- also expresses the sense of 'against, in opposition to', e.g., anti-oxidant प्रति-जारणकर्ता.

Hypo- from Greek, meaning 'under, beneath', is the same as Sanskrit उप- (*y* in hypo is Greek *u*, Sanskrit उ; cf. Cyrus, Sanskrit कुरु, the name of an ancient Persian king. कुरु occurs in the inscriptions of Darius).

In chemistry hypo- indicates a *lower* state of oxidation or *low* (usually the lowest) position in a series of compounds, e.g., hypo-chlorite उप-नीरित, hypo-bromite उप-दुरित, etc. उप- 'under, below' occurs in such words as उपकक्ष 'being under the armpit', उपग्रहण 'the act of seizing from below'.

Meso-, from Greek, is Latin *medius* and Sanskrit मध्य.

Ortho- is also from Greek. It is Sanskrit ऊर्ध्व high. Ortho- is employed in naming certain *higher* forms of hydration (either the *highest* form or the *highest* stable form) specially in the case of acids. The ortho- position is higher on the benzene ring than the meta- or the para- position. Ortho- indicates 1.2 position, meta- 1.3 position, and para- 1.4 position.

Per-, a prefix denoting the presence in a compound of the *largest possible* or a relatively *large* proportion of the same element, or the presence of an atom having its *highest*, or a relatively *high*, valence. Our counterpart for per- is अति-, e. g., per-iodide अति-जम्बेय.

Pyro- अग्नि-, is a combining form, Greek *pyr*, *pyros*, meaning fire अग्नि. It is used to denote fire or heat, e.g., pyro-gen अग्नि-जन.

Super- signifies 'over and above, higher' as in quantity, quality or degree. अधि- also expresses 'above, over and above'. Super-heated अधि-तप्त.

Boro- टांक- stands for boron टांकण, as in boro-silicate टांक-सैकतीय.

Fluor-, Fluoro- तरस्व-, a combining form for *fluorine* तरस्विनी; e.g., fluoro-benzene तरस्व-धूपेन्य.

Form- वम्र-, a combining form for *formic* वम्रिक or *formyl* वम्रल, as in form-aldehyde वम्र-सुव्युद. Latin *formica* meaning an ant is akin to Sanskrit वम्र, from which is derived the common Hindi word बामी or बांबी ('anthill' from Sanskrit वम्रीय).

Hydr-, hydro- उद्- stands for hydro-gen उद्-जन, as in hydr-oxide उद्-जारेय and hydrocarbon उद्‌गांगार. Hydrate is a compound formed by union of water with some other substance. It is जलीय. Hence hydrated is जलीयित.

Nitro- भूय- stands for certain compounds of nitrogen भूयाति or of its acids, as nitrohydrochloric भूयोद्नीरिक.

Oxy- जार- is a prefix from oxygen जारक denoting presence or addition of oxygen, as oxyacid जाराम्ल.

Sulph- शुल्ब- stands for sulphur शुल्बारि, as in sulph-antimonide शुल्बाञ्जनेय.

Thio- गन्ध-, a combining form from Greek *theion* 'brimstone', denoting the presence of sulphur गन्धक, used specifically to indicate that the oxygen of a compound is more or less replaced by sulphur, as in thio-acetic गन्ध-शुक्तिक (see note on शुल्बारि, p. 131a).

nulli- शून्य-, nulli-valent शून्य-संयुज.
uni- एक-, uni-valent एक-संयुज.
bi- द्वि-, bi-valent द्वि-संयुज.
ter- त्रि-, ter-valent त्रि-संयुज.
quadri- चतुः-, चतुर्-, quadri-valent चतुः-संयुज.
quinque- पञ्च-, quinque-valent पञ्च-संयुज.
sexi-, hexa- षट्-, hexa-valent षट्-संयुज.
septi-, hepta- सप्त-, hepta-valent सप्त-संयुज.
octa- अष्ट-, octa-valent अष्ट-संयुज.
mono- एक-, mon-oxide एक-जारेय.
di- द्वि-, di-oxide द्वि-जारेय.
tri- त्रि-, tri-oxide त्रि-जारेय.
tetra- चतुः-, चतुर्-, चतुस्-, चतुष्-, चतुश्- (according to the Sandhi rules), tetrabromide चतुर्दुरेय, tetraborate चतुष्टांकीय.
penta- पञ्च-, penta-chloride पञ्च-नीरेय.

Suffixes

-ate is used for naming salts and esters from those acids whose names end in -ic. We have used -ईय which forms adjectives and adnouns, as in arsenate नेपालीय, borate टांकीय, carbonate प्रांगारीय, molybdate संवर्णीय, phosphate भास्वीय, silicate सैकतीय, sulphate शुल्बीय, titanate रञ्जीय, tungstate चण्डीय, uranate किरणीय, vanadate रोचीय.

-gen, French *-gene*, from Greek *-genēs* to be born, is the same as the Sanskrit -जन from √जन् 'to be born'. It is used in forming nouns denoting a substance that produces or generates; used chiefly in chemistry, as in hydro-gen उद्-जन, pyro-gen अग्नि-जन.

-ic signifies 'pertaining to'. It is the same as the common Sanskrit adjectival suffix -इक, which occurs, e.g., in लौकिक 'pertaining to लोक'. Sulphuric शुल्वारिक, nitric भूयिक, boric टांकिक, cupric ताम्रिक.

-ide is used in names of compounds, as in chloride; specifically in naming binary compounds by adding it to the contracted name of the non-metallic or negative element or radical, as in hydrogen sulphide, lead iodide.

This suffix is originally Latin *-is*, plural *-ides*, which is a patronymic suffix, e.g., Nereid 'a daughter of Nereus'.

Our counterpart is -एय, denoting 'origin or descent from, suitable for, etc.', as in कौन्तेय son of कुन्ती; श्यामेय descended from श्याम; सभेय fit for an assembly सभा; व्रैहेय sown with व्रीहि; शैलेय rocky, produced in rocks शैल, etc. Examples are: antimonide अञ्जनेय, arsenide नेपाल्येय, chloride नीरेय, fluoride तरस्वेय, oxide जारेय, sulphide शुल्वेय, telluride वंगकेय.

-idine is a compound suffix, -ide + -ine एय + ई = एयी (the final vowel of एय has been assimilated by पररूप).

Suffix **-ine** is variously used. It is used for forming both adjectives and nouns. It represents Latin *-inus*, *-ina*, *-inum*. In English it is taken from French where *-in* is masculine and *-ine* is feminine. In English it is usually represented by -ine, only occasionally by -in. -ine when forming nouns represents French *-ine* which is derived from Latin *-ina*, which again is from Greek *-ine*, forming feminine titles, as in Greek *eroine*, Latin *heroina*, French *heroine*, English *heroine*. In Latin *-ina* formed feminine abstracts from verbs as well as substantives from other sources. In chemistry -ine was first used unsystematically in forming names of extractive principles and chemical derivatives of various kinds; also, in English names given early in the nineteenth century to the four elements *chlorine*, *fluorine*, *iodine*, *bromine* (in French *chlore*, *fluor*, *iode*, *brome*). In all these, but especially in the names of extractive principles the ending -ine was by some reduced to -in. In recent systematic nomenclature the two forms have been differentiated.

-in is a modification of the chemical suffix -ine. It was introduced into systematic nomenclature by Hofmann in about 1860, used systematically in Watts' A Dictionary of Chemistry in 1866 and subsequently adopted by the Chemical Society for the names of neutral substances, such as glycerides, glucosides, bitter principles, colouring matters and proteids, which are thus distinguished from the names of alkaloids and basic substances in -ine. Examples, albumin, casein, fibrin, globulin, mucin, myosin, pepsin; cerebrin, chitin, chondrin, gelatin, lecithin; acetin, alizarin, aloin, arbutin, cerotin, curcumin, dextrin, haematin, indigotin, inulin, isatin, palmitin, purpurin, salicin, ulmin, vanillin. Some of these were formerly spelt with -ine and in that spelling had passed into popular use before the rectification of nomenclature, esp. dextrine, gelatine, margarine, which are still commonly so spelt in non-scientific use. Cf. "Basic substances should invariably be indicated by names ending in -ine, as aniline, instead of anilin, the termination -in being restricted to certain neutral compounds, viz. glycerides, glucosides, bitter principles, and proteids, such as palmitin, amygdalin, albumin." Chemical Society, Instructions to Abstractors, sec.16 (A.D. 1881). Some chemists, however, prefer -in for basic substances also.

We have translated the chemical suffix -ine by its counterpart feminine suffix -ई and have distinguished it from -in, which has been translated by -इ; the two remaining close to each other though still different.

-ite is Latin *-itus*, an ending of past participles. Sanskrit is -त or -इत (गणित, कथित). We have used -इत to serve the purpose, as in antimonite अञ्जनित.

In chemistry **-ium** has been used to form the names of new metallic elements. Latin names of metals were in *-um*, e.g., *aurum*, *argentum*, *ferrum;* the names *sodium*, *potassium* and *magnesium* derived from *soda*, *potassa* or *potash*, and *magnesia*, were given by Davy in 1807, with the derivative form *-ium*; and although some of the later metals have received names in *-um*, the general form is in *-ium*, as in *cadmium*, *lithium*, *palladium*, *titanium;* in conformity with which *aluminum* has been altered to *aluminium*. So hydrogen (उदजन) when theoretically regarded as a metal, has been called *hydrogenium* (उदजनातु).

In India the common word for metal is धातु. It has been abridged to -आतु and has been used to form the names of new metallic elements.

When, however, -ium, -um are used to denote elements, which are non-metals, such as helium (which is a gas), -आतु is not used.

-metry, a combining form, Greek *-metria*, from *metron*, denoting an art, process, or science of measuring

(something specified). -मिति 'measuring' from √मा 'to measure' is its Indian counterpart.

-ose is short for glucose. Similarly -धु is short for मधु. In certain cases, viz., मधु-म, दुग्ध-म, -म has been used instead of -धु for the sake of euphony.

-ous is an adjectival suffix, meaning 'full of, abounding in, having', etc. etc. In chemistry it has been specialised to denote a valence lower than that denoted by -ic, as in nitrous, sulphurous, etc., as contrasted with nitric, sulphuric, etc.

We have specialised the adjectival suffix -य to serve the purpose of -ous, स्वर्ण्य aurous (cf. स्वर्णिक auric).

-yl denotes radicals. A radical is मूल. Its second part -ल has been used to serve as a suffix, just as *-yl* from Greek *hyle*, as in uranyl किरणल.

In adding suffixes to the names of elements we have taken care to keep the length of the original word limited to two syllables, so as to avoid longish words. As a rule we have not allowed our words to exceed the length of four syllables. The practice of shortening names of elements before suffixes is well-established in English, e.g., phosphorus is shortened to phosph- before -ate, -ide, -yl.

MINERALOGY

Every mineral has its distinct chemical composition. The Natural History Section of the British Museum has arranged its index of mineral species and varieties chemically. As a single major element in mineralogical nomenclature chemistry plays an important role. Hence it is to chemistry that we turned for a basis of our mineral names.

English mineral names are mostly uncouth, uncanny, clumsy, rugged and even solitary (being unconnected). They are uninviting. They repel the layman. To the student a memory-load, that can be carried only as long and as far as it must.

Mineralogy must remain outside the pale of our general consciousness as long as we have nothing but English terms, which can neither be pronounced nor mineralogically explained.

Abbreviations are an outstanding feature of the chemical and other nomenclatures based thereon. They help us to incorporate, within the short span of a name, the most salient ingredients that go to form the mineral.

The suffix *-ite* is used not only for naming minerals, but also for rocks (e. g. granite), explosives (e.g. cordite), chemical salts and esters formed from acids whose names end in *-ous* (e.g. sulphite), palaeontological fossils (e. g. ammonite), and even divisions of the body (e.g. somite). Thus the English suffix is a non-specific and hence not useful as a means of distinguishing mineral names from others.

Similarly *-lite* (equivalent to *-lith*, from Greek *lithos* 'a stone') is used to denote not only a mineral, but a rock, a fossil, etc.

The non-specific character of *-ite* is due to the start of its use at the beginning of the present era of science, when a mineral, a rock, an explosive, a salt could all be named with one suffix.

Word-Notes

Notes on some of the terms will help the student:

Sylvanite is a toponym from Transylvania. It often occurs in implanted crystals resembling written characters and hence is called *graphic tellurium* अक्षर-वंगक.

हिंगुल is an ancient term for cinnabar (e.g. in Varāhamihira's Bṛhat-saṃhitā).

रुचा is from रुच् 'to shine', in allusion to the metallic lustre of galena.

वर्णिज chromite is one of the few names, whose basis

is identical with English.

Some other isonyms are:

ताम्र-माक्षीक	chalco-pyrite
नेप-माक्षीक	arseno-pyrite
अंजनिज	antimonite, stibnite
ताम्रिज	cuprite
संवर्णिज	molybdenite
लिखिज	graphite
लोहकिज	manganite
चुम्बिज	magnetite
प्रबलिज	hypersthene
शृंगान्धन	hornblende
कपिशिज	limonite
परशिवज	axinite
रुधिर-प्रस्तर	blood-stone
हरितिज	chlorite
क्षारिज	sodalite
नीलिज	iolite
अजलिज	anhydrite
अपपर्णिज	apophyllite
ऋजुदलिज	orthoclase
तिरोदलिज	plagioclase
शृंगप्रस्तर	hornstone

सं-रस amalgam. रस is mercury, hence रसायन "medicine prepared with mercury". सं-रस is an alloy of mercury with another metal or metals. Amalgam is etymologically connected with मालिश.

Amalgam

|

French *amalgame*

|

Mid-Latin *amalgama*

|

Arabic *al-malgham*

|

Greek *malagma* "emollient" (मलहम)

|

Greek *malassein* "to soften" (मालिश करना)

|

Greek *malakos* "soft"

अन्धन and blende both mean "blinding". *Blende* is German, from *blenden* "to blind" in allusion to its dazzling lustre.

असिताश्म (असित dark, अश्म stone) is basalt, a dark, hard species. असिताश्मिक is basaltic.

दीप्तिज is from दीप्त "bright", just as augite is from Greek *augites* "bright".

धूम्रजतु asphalt. धूम्र is smoke. Asphalt has a brown to black colour and burns with a smoky flame. According to Webster, English bitumen is from Latin and is akin to Sanskrit जतु "lac, gum".

Ortho-augite, and ऋजु-दीप्तिज are isonyms. Ortho and ऋजु both mean "straight".

Pyroxene is from Greek *pyr* "fire" and *xenos* "a stranger". It is a meta-silicate सम-सैकतीय. *Meta-* is a prefix of great variety of significance. In Greek it means "between, with, after". It is akin to German *mit* "with" and English *mid* "with" in *mid-wife*.

चूर्णिज and calcite are isonyms, चूर्ण and Latin *calx* both meaning "lime".

श्यामिज and kyanite (= cyanite) are isonyms, श्याम "dark" and Greek *kyanos* "dark-blue".

कपिश-उपल and jasp-opal have the second element, उपल opal, in common. See Hobson-Jobson by Yule, s.v. opal: "This word is certainly of Indian origin: Lat. *opalus*, Greek *opallios*, Sanskrit *upala* 'a stone'. The European word seems first to occur in Pliny".

लवंगिज and anthophyllite are isonyms. लवंग and Neo-Latin *anthophyllum* both mean "clove". It is clove-brown in colour.

Pyromorphite is from Greek *pyr* "fire" and *morphe* "form". Called also green lead ore, hence our name हरि green सीसिज.

कणिकिज (कणिका a granule) is an isonym of chondrodite (from Greek *chondrodes* "granular"). It often occurs in a granular form.

पुष्पराग for topaz is an ancient word.

गोमेद is an ancient word for a पीतमणि. It is used in Tantras, Purāṇas and Jaina scriptures. Sometimes it is interpreted as onyx or sardonyx. गोमेदः प्रियकृद् राहोर् ईषत्पीतारुणप्रभः—इति शुक्रनीत्याम् ॥ For more details see अष्टांगहृदयकोष by K. M. Vaidya, Trichur, 1936.

Zircon and jargon are from Persian *zargūn* "gold-coloured", a translation of Sanskrit पीतमणि.

Olivine is from olive, alluding to its green colour. हरितोपल and olivine are isonyms. Here उपल refers to its being used as a precious stone.

Stilbite is from Greek *stilbein* "to glitter". पूलिज is from पूल "a sheaf", alluding to the sheaflike aggregations of its crystals. Called also desmine.

सर्पिज and serpentine are isonyms, alluding to its usual dull, green colour, often with a spotted or mottled appearance resembling a serpent's skin. It is

used as an ornamental stone, and when fibrous, as asbestos.

स्तूपिज for scapolite is in allusion to its crystallizing in the pyramidal division of the tetragonal system (स्तूप pyramid).

Turquois is from French "Turkish", alluding to its introduction through Turkey. हरिताश्म is an ancient word for turquois. See M. Monier-Williams' Sanskrit-English Dictionary.

वृक्किज and nephrite are isonyms, वृक्क and Greek *nephros* both mean "kidney", formerly worn as a remedy for kidney diseases. Also known as kidney stone.

वैडूर्य and मरकत are the parents of beryl and emerald. Webster's New International Dictionary of the English Language (second edition):

emerald
|
Middle English *emeraude*
|
Old French *esmeraude, esmeralde*
|
Latin *smaraldus, smaragdus*
|
Greek *smaragdos, maragdos*
|
Prakrit *maragada*
|
Sanskrit *marakata* मरकत

हेम-वैडूर्य and chryso-beryl are isonyms, हेम and *chrysos* both meaning "gold".

अणु-प्रवणिज and micro-cline are isonyms, micro = अणु and cline = प्रवण "slope".

टांकिज and boracite are isonyms, टंकण being borax.

नभोनीलिज (from नभोनील "sky blue") and lazurite are isonyms. Lazulite is व्योमनीलिज.

corundum
|
Tamil *kurundam*
|
Sanskrit *kuruvinda* कुरुविन्द

(Webster)

sapphire
|
Old French *safir*
|
Latin *sapphirus*
|
Greek *sappheiros*
|
Hebrew *sappīr*
|
Sanskrit *śanipriya* शनिप्रिय "dear to the planet Saturn"

(Webster).

इन्द्रगोप is an ancient word, signifying the insect cochineal, red in colour. The Indian readers who know the इन्द्रगोप have only to look to the coloured plate in Webster illustrating the carnelian, and be convinced that इन्द्रगोप is carnelian.

पद्मराग "red lotus-coloured" for ruby is an ancient word.

कण्टकिज and spinel are isonyms. कण्टक and Latin *spina* both mean "thorn", alluding to the pointed crystals.

राहुरत्न for hyacinth is an ancient word.

रुधिरिज and erythrine are isonyms. Erythrine is from Greek *erythros* "blood" रुधिर.

स्वफेनाश्म and soap-stone are isonyms, स्वफेन soap, अश्म stone. स्व-फेन "whose wealth स्व is foam फेन".

शैल-खटी is Hindi सेलखड़ी.

वह्नि-अश्म "fire-stone", from its striking fire with steel.

Leucite is from Greek *leukos* "white". श्वेतिज is an isonym of leucite.

Satin spar is a fine fibrous variety of calcite चूर्णिज having the lustre of satin काशुक— काशुक-चूर्णिज.

Asbestos is from Greek *a-sbennynai* "not to extinguish". अ-दह is "not burning".

A detailed analysis of mineral names is usually supplied in the body of the Dictionary.

BOTANY

औद्भिदी stands for औद्भिदी विद्या. औद्भिदी is a feminine adnoun from उद्भिद् a plant. उद्भिद् is derived from उद्

up + √भिद् to break, on account of its coming out after breaking the seed and the earth (बीजं भुवं वा उद्भिनत्ति). The term was applied to Spermatophytes as well as to Sporophytes (बीज including both seeds and spores).

उद्भिद्-विद्या has already been used in ancient times as a designation of the science of plants.

The popular name for botany is वनस्पति-शास्त्र. Etymologically वनस्पति is 'the lord of the forest'. Technically it signifies a large tree, bearing fruit apparently without blossoms, as several species of the fig, the jack tree, etc.

औद्भिदी has been formed in accordance with the system of naming sciences in ancient times (see note on रैखिकी pp. 74-75).

We have preferred the use of the term औद्भिदी and other similar formations like प्राणिकी zoology, जैविकी biology, etc. to उद्भिद्-विद्या, प्राणिशास्त्र, or जीवशास्त्र because the former terms are single words and hence better suited to form compounds and derivatives. For example: botanical garden औद्भिद उद्यान is to be preferred to उद्भिद्विद्यीय उद्यान.

Binomial and Trinomial Nomenclature in Biology

In scientific nomenclature of plants and animals, the elements constituting a binomial or trinomial term are placed in the sequence—genus, species, sub-species, thus the full Latin name is composed of two or three words, of which the first denoting the genus is the main word. It can stand by itself. The second word which comes after the genus name is an adjective which has no independent existence. The two words together constitute the name of the species. In case a species is further divided into sub-species, a third word is added on to the preceding two. It too has no independent standing. It qualifies the preceding two words taken as a whole. All the three together stand for the name of the subspecies. Thus *Ficus* is the genus of figs. *Ficus religiosa* is the peepal tree, which is a species of *Ficus*. For an example of a trinomial term we might take *Corvus*, a genus of crows. *Corvus levaillanti*, the species, and *Corvus levaillanti culminatus*, the subspecies.

Thus in Latin nomenclature, adjectives follow substantives. It is quite common in Latin and French. But the case is reverse in English, Hindi or Japanese, in which as a rule the adjective precedes the noun. In the examples given above the English translations are 'the Religious Fig-tree' for *Ficus religiosa* and 'the Tibetan Raven' for *Corvus corax tibetanus* (Raven standing for the species *Corvus corax*).

One might pick up similar examples from astronomy, pharmacy, etc. Latin *Ursa Major* (*Ursa* from Skt. ऋक्ष), and *Ursa Minor* are translated into English as the Great Bear (bear from Skt. भल्ल = भल्लूक) and the Little Bear respectively. Similarly *acidum boricum* in Latin is boric acid in English.

Here are a few examples from Japanese—

Latin	Japanese
Medicago sativa	*murasaki umagoyashi*

Umagoyashi is the Japanese name for the genus Medicago. The adjective *murasaki* precedes the noun *umagoyashi*. It may also be noted that *murasaki* is not a translation of *sativa* (eatable). It refers to another characteristic of the species, viz., the purple colour. *Medicago sativa* which is popularly known as alfalfa in U.S A. and purple medic in England, bears bluish-purple clover-like flowers.

Latin	Japanese
Vitis thunbergii	*ebi dzuru*

Japanese *dzuru* stands for *Vitis*. *Thunbergii* is the specific adjective from a proper noun (Thunberg, name of a Swedish botanist), which has not been retained by the Japanese but replaced by their own specific adjective *ebi*.

Latin	Japanese
Chloris sinica kittlitzi	*ogasawara kawarahiwa*

In this case the Japanese have replaced the specific and the subspecific adjectives in the Latin term, which both happen to be proper nouns, by a proper name of their own viz. *ogasawara*, which is a small island in the North Pacific (although it is not the only place where this bird is found).

In the Indian system of nomenclature, as in the Japanese, the genus name will come last and will be preceded by attributive words, serving as specific or subspecific adjectives, e.g.,

Ocimum (genus) तुलसी

Ocimum sanctum सामान्य तुलसी

Corvus (genus) काक

Corvus levaillanti कृष्ण काक

Corvus levaillanti culminatus दक्षिण कृष्ण काक (found in South India दक्षिण).

* * *

In India we have a rich Ayurvedic literature which has preserved more than a thousand names of plants and herbs. These names have been used since immemorial times throughout the length and breadth of India. The use of these terms will make the study of systematic botany homely even for those who do not know a syllable of English.

Amaryllidaceae सुदर्शन-कुल. सुदर्शन is well-known to the Vaidyas.

Ampelidae द्राक्षा-कुल. द्राक्षा is Hindi, Panjabi दाख, Marathi द्राक्ष.

Combretaceae अर्जुन-कुल.

Dipteraceae कर्पूर-कुल. कर्पूर has been taken up by Persian, Arabic and all modern European languages: काफूर, camphor, etc. In Hindi it is कपूर and Marathi कापूर.

Capparidaceae करीर-कुल. करीर is well-known. The name has not changed even in the popular speech.

Cruciferae राजिका-कुल. राजिका is Hindi राई.

Euphorbiaceae एरण्ड-कुल. एरण्ड is one of the main oil-seed plants.

Rutaceae निम्बु-कुल. निम्बु is originally a native of India and it has travelled to the entire world. Persian, Arabic and European 'lemon' are corruptions of the Sanskrit word निम्बु. Cf. Marathi लिम्बु.

Asclepiadaceae अर्क-कुल. अर्क is Hindi आक and Panjabi अक.

Labiatae तुलसी-कुल. तुलसी is the well-known sacred plant.

Menispermaceae गुडूची-कुल. गुडूची and the next word पुनर्नवा are common Ayurvedic terms.

Nyctaginaceae पुनर्नवा-कुल.

Amaranthaceae खरमञ्जरी-कुल.

Annonaceae सीताफल-कुल.

Anacardiaceae भल्लातक-कुल. भल्लातक is the washerman's marking nut.

Sapindaceae अरिष्ट-कुल. अरिष्ट is Hindi रीठा and Marathi रिठा.

Solanaceae धत्तूर-कुल. धत्तूर is the common Indian poisonous plant.

Magnoliaceae चम्पक-कुल. चम्पक flowers are well-known.

Moringae शोभाञ्जन-कुल. शोभाञ्जन is Panjabi सोहाञ्जना and Marathi शेवगा.

Pedalineae तिल-कुल. तिल is common throughout India.

Myristicaceae जातिफल-कुल. जातिफल is Hindi जायफल and Marathi जायफळ.

Nymphaeaceae उत्पल-कुल.

Piperaceae पिप्पली-कुल. पिप्पली has given to English the word pepper.

Sapotaceae मधूक-कुल. मधूक is Hindi महुवा and Marathi मोह.

Scitamineae हरिद्रा-कुल. हरिद्रा is Hindi हलदी and Marathi हळद.

Zygophyllaceae गोक्षुर-कुल. गोक्षुर is Hindi, Panjabi, Marathi गोखरू.

Onagraceae शृंगाटक-कुल. शृंगाटक is Hindi सिंघाडा and Marathi शिंगाडा.

Pendanaceae केतकी-कुल. केतकी is Hindi and Marathi केवडा.

Juglandaceae अक्षोट-कुल. अक्षोट is Hindi अखोट and Marathi अक्रोड.

Betulaceae भूर्ज-कुल. भूर्ज is well-known in the compound भूर्जपत्र, the fine bark of the birch tree on which ancient books were written in Kashmir and Nepal. The English word birch is akin to Sanskrit भूर्ज.

Santalaceae चन्दन-कुल. चन्दन is well-known throughout India. Arabic and English 'sandal' are corruptions of Sanskrit चन्दन.

The Indian words have a homely atmosphere. The English words or rather the Latin words are hard as stone and cannot be easily digested. At present our boys and girls spend weeks and months of strenuous labour in trying to stuff their brains with Latin words. Botany can become a most pleasant study if it is taught with Indian words. Otherwise it will remain a neglected subject in our universities. So far as the common man is concerned, it would be idle to hope that he will have any interest in the subject in spite of the fact that plants and flowers surround him and he would love to know as much about them as possible.

Botany is a descriptive science and there will be no

difficulty in spreading its knowledge far and wide to the lowest intelligence if the Latin terms are replaced by proper Indian words. The study of botany is closely connected with agriculture. We shall be able to impart botanical knowledge to our farmers and achieve good results. But the same would be unthinkable if we stick to English terms.

It is only the research worker who has to establish contacts with the whole world, who will have to learn English and not only English but German, French, Russian, Japanese, that is, any language in which notable contributions have been made in the particular branch in which he is engaged. The research worker's labour of learning foreign languages cannot be avoided, but he too, will find it far more pleasant to get his initiation through his mother-tongue.

Scientific study of botany is begun now-a-days at about the age of fifteen. With English terms it cannot be begun earlier. But with our own terms it can be begun at about the age of twelve, as soon as the powers of observation begin to quicken. The young students can be taken freely into the domain of leaves, flowers, fruits and plants. It can almost become a pastime. With the aid of a microscope the pastime can pass into a thorough study.

ZOOLOGY

Zoology is the science of animals : प्राणिविद्या, प्राणिशास्त्र or प्राणिकी. प्राणी is the general term for animals. Etymologically it should include all life 'that breathes'. But by long usage the word has been restricted to animal life. प्राणी तु चेतनो जन्मी जन्तु-जन्यु-शरीरिणः— अमरकोश. चेतन as a synonym of प्राणी, is a highly significant word. In general, animals exhibit a higher degree of excitability or irritability to external stimuli than do plants, and most multicellular forms have a more or less distinct nervous system; in the highest species, there are manifestations of sensation and *consciousness*, not recognizable in plants. English 'animal' is from Latin *animalis*, from *anima* breath. The Sanskrit root underlying *anima* is अन् to breathe. With प्र, we get प्राण 'breath' and प्राणी 'that which breathes'.

जीवविद्या or जैविकी is biology, which includes botany and zoology. Although historically bio- and zoo- are both akin to Sanskrit जीव, जीव has been restricted to denote life in general as against अजीव. English 'inanimate' corresponds to अप्राण in शतपथ-ब्राह्मण.

Zoology and botany are descriptive sciences. They stand on a different footing from abstruse sciences. Here terms dominate the science. Taxonomy alone would yield over two million words. In European scientific practice terms are derived from Greek and Latin. "Apparently every name of an animal used in classical Greek has been made to do service in modern nomenclature" *E. C. Jaeger*. Not only this much, Greek and Latin names have been modified and corrupted until they form a large number of designations. Calomys and Callomys, both derived from Greek *kalos* 'beautiful' and *mus* 'mouse' (from Sanskrit मूष), have actually been proposed for different genera of mice. Reference may also be made to merely arbitrary groups of letters which are known as 'nonsense-names'. They have been proposed by authors who, like Ameghino, Gray, and Lataste, in making many names have found the usual sources insufficient or unsatisfactory. Examples of nonsense-names are Azema, Blarina, Degonia, Kogia and Tatera.

A large proportion of names are compound words. While Latin offers comparatively little opportunity for making compounds, the Greek language lends itself readily to the combining together of nouns and adjectives in almost endless variety. In Latin modifications by prefixes and suffixes alone are common. Formerly compounds seem to have been in disfavour, for Illiger in 1811, following Linnaeus, rejected them. At the present time, compounds are considered not only unobjectionable but highly desirable. For without them it would be almost impossible to coin designations for the ever-increasing multitude of genera and species

without resorting to anagrams and arbitrary nonsense combinations of letters.

Coues has complained that 'systematic Zoology or the practice of classification, has failed to keep pace with the principles of science, we are greatly in need of some new and sharper tools of thought". This complaint is true for European nomenclature.

* * *

Our names may be divided into two major classes:

(1) Classical Sanskrit names— We have laboured for years to make a wide collection from Vedas, Purāṇas, Rāmāyaṇa, Mahābhārata, Suśruta, Buddhist and Jain texts as well as lexicons and general literature that is available in print. Thousands of names have thus been collected. While in many cases it is possible to identify a Sanskrit name with a modern one, there remain a good many whose exact value is yet to be ascertained.

Ancient names are mostly names of species. The names of genus, family, order, etc., are derived by the addition of the word meaning genus, family, order, etc., e.g., *Anser* a genus, is हंस-प्रजाति (प्रजाति is our word for genus. प्रजाति is a higher category than जाति. जाति is defined as समान-प्रसवा 'which brings forth its like' i.e. a species), *Anserinae* is the subfamily हंसानुवंश (अनुवंश subfamily), *Anatidae* is the family हंस-वंश (वंश family), and *Anseres* the order हंस-गण (गण order). It is more convenient to denote genus, subfamily, family, order, etc., by a full word rather than by a suffix.

As we have gone up so we can go down the scale and have a perfectly clear nomenclature for species. The common swan is known to European science as *Anser anser*. Our word for it is सामान्य हंस. *Anser anser* is a tautonym and if we had followed the European practice we could have translated it by हंस हंस. It would be so odd. Light has dawned on the western taxonomists and such names are now forbidden by the International Code of Botanical Nomenclature. Let us hope that the zoologists will follow suit.

Other species of *Anser* are designated by the addition of some significant adjective, e.g. *Anser erythropus* रक्तपाद् हंस (Greek *erythros* means red रक्त, while *pus* is पाद्).

(2) In the absence of ancient Sanskrit names modern Sanskrit names are derived either from Sanskrit roots with requisite suffixes or by coupling well-known Sanskrit words.

Geographical names are sometimes made use of to particularise the locality where a species or subspecies is found. Names indicate size, form, colour, habit or some special character.

As a rule our names are not arbitrary. None of them is nonsensical. Every one of them is designed to be helpful in understanding some distinctive feature.

Our names have the enviable characteristic of not being removed from our literary language. In the examples given above the scientific words *Anser* and *erythropus* are unintelligible, for *Anser*, *erythro*, and *pus* are not used in general or literary English (English words are goose, red and foot).

Against these their Indian counterparts हंस, रक्त and पाद् are known to every student of Indian literature. The vast majority of the word-elements in Indian scientific terminology partake of this feature.

E. C. Jaeger in his Source-book of Biological Names and Terms gives twelve thousand terms, which he considers to be the essential elements from which biological names and terms are made. With us the number is far smaller. We are able to cover the entire sphere of biology (anatomy, histology, cytology, physiology, embryology, genetics, taxonomy, paleontology, bionomics, ethology) with about six thousand elements. Sanskrit is known for its high transparency. Five hundred common roots and a hundred affixes form the rock-basis of Sanskrit vocabulary. Of these 600 elements, those in frequent use are not more than 400. Formations from these 400 elements are widely current in every language of India and are known to our school boys and girls. About 1000 plant names and an equal number of animal names have been made the foundation for naming numerous genera.

The remaining three thousand words are common nouns, adjectives, adverbs, which are used singly or in combinations to form descriptive words. Out of these three thousand, no less than 2500 are current in literary prose, poetry and newspapers. What the Indian science student has to do is to acquaint himself with the process of analysis and synthesis of roots and affixes, and a few rules of composition of words and word-elements. The

Indian student can take it up as a study or he can go on mastering words as they come. While studying science through English, an Indian student hardly ever stops to grasp a scientific term. He takes it as a sound and spelling unit, and remains unconcerned with its etymology. Its meaning he knows from the definition. The Indian student is handicapped by his ignorance of Anglo-Saxon, French, Latin or Greek and hence is unable to probe into its heart. When words are not understood spellings are a great memory-burden. I have quoted above a few nonsense words. To the Indian student, ignorant of the origins of English words, biological terms in general are nonsensical conglomerations of syllables.

In the East, we can derive instruction from the Japanese system of biological nomenclature. We reproduce a few specimen names from the Bulletin of the Biogeographical Society of Japan, Vol. I, No. 3, June 1930. This volume describes the bird-life of Bonin and the neighbouring islands.

Corvidae=Jap. *karasuka* (*karasu* 'crow', *-ka* 'family').

Fringillidae=Jap. *atorika* (*-ka* 'family').

Chloris sinica kittlitzi = Jap. *ogasawara kawarahiwa* (*ogasawara* 'Bonin Island'. Note that the European proper name has been replaced).

Chloris sinica seebohmi = Jap. *iwoto kawarahiwa* (*iwoto* 'Volcano Island'. Here and in the previous name the trinomial nomenclature has been replaced by the binomial. The proper name *seebohmi* has been deleted).

Zosteropidae = Jap. *mejiroka* (*-ka* 'family').

Zosterops japonicus = Jap. *bonin mejiro* (The popular Japanese name is *mejiro*).

Zosterops japonicus alani = Jap. *iwoto mejiro* (*iwoto* 'Volcano Island'. Its popular name in Japanese is *mejiro*).

Pycnonotidae = Jap. *hiyodorika* (*-ka* 'family').

Microscalis amaurotis squamiceps = Jap. *ogasawara hiyodori* (*ogasawara* 'Bonin Island'. The popular name in Japanese is *hiyodori*).

Microscalis amaurotis magnirostris = Jap. *hashibuto hiyodori* (the Japanese popular name in the Volcano Island is *hiyodori*).

Sylviidae = Jap. *uguisuka* (*-ka* 'family').

Horornis diphone diphone=Jap. *ogasawara uguisu* (its popular name in Japanese is *uguisu*).

Horornis diphone iwootoensis = Jap. *iwoto uguisu*.

Turdidae = Jap. *tsugumika* (*-ka* 'family').

Aegithocichla terrestris = Jap. *shima gabicho* (*shima* 'island' as contrasted with water; cf. *terrestris* in the Latin name).

Accipitridae = Jap. *takaka* (*taka* 'hawk, falcon' + *-ka* 'family').

Buteo japonicus toyoshimai = Jap. *ogasawara nosuri*.

Falconidae = Jap. *hayabusaka* (*hayabusa* 'falcon' + *-ka* 'family').

Falco peregrinus fruitii = Jap. *shima hayabusa* (*shima* 'island', *hayabusa* 'falcon').

AVIFAUNA

India, Burma and Ceylon contain one of the richest and most varied avifaunas on the face of the globe. Covering some 40 degrees of latitude and about the same of longitude, they enclose within their boundaries a vast diversity of climate and physical features. These range from the dry, scorching sandy deserts of Sindh and Rajputana and the humid evergreen rain forests of Assam and the South Western Ghats, to the region of glaciers and eternal snow in the mighty Himalayas. Smooth wide spaces of depressed river basins, either sandy, dry and sun-scorched or cultivated, or water-logged under a steamy moisture-laden atmosphere (the terai) lie at the base of the northern ramparts. The great Central Indian and Deccan Plateaux succeed the fertile alluvial Gangetic Plain and are flanked on the west by the broken crags and castellated outlines of the ridges of the Western Ghats which overlook the Arabian Sea and continue southward in gentle, smoothly-rounded

slopes of green uplands—the Nilgiri and other hills of Southern India.

Altogether there are 24 hundred species and sub-species which have been described with great patience and scholarship by E. C. Stuart Baker in the 8 volumes of Indian Fauna (Birds). They were published from July 1922 to September 1930. Each bird has been given a bi- or a tri-nomial designation. According to the scientific practice in the West the names are in Latin. Each Latin name is followed by an English name. The English names are not always translations of Latin.* In the Latin nomenclature the words signifying the genus come first and those signifying the sub-species come last, the words for the species being placed in between. In English the order has been reversed, the sub-species coming first and the genus coming last.

Binomial or trinomial system of naming plants and animals is a recent scientific device. In ancient times we have single names standing mostly for species. Our ancestors lived with nature and loved plants, animals, rivers and mountains. They observed and named animals with loving care. We find hundreds of names of birds in Sanskrit literature.

In the present work ancient names have been fitted into the trinomial scientific scheme. These names, while serving the needs of scientific classification would be found to be more significant, easier to grasp, simpler to pronounce and hence incomparably quicker to remember than their Latin counterparts. In certain quarters it has sometimes been felt that Latin names be left untranslated. But this view loses all force when we find that foreigners who came to India from a distance of six thousand miles thought it practicable to append to every Latin name an English trinomial designation so that their compatriots could better study and appreciate Indian birds than could ever be done through the mouth-filling mass of vowels and consonants known as scientific names. The Indian names, moreover, correlate the present with the past. Our names have a pedigree and hence future scientific studies will not be removed from the past achievements of the race. It does not, however, mean that Indian scientists will not acquire a knowledge of Latin names. Research workers will have to get acquainted with Latin and English names when they are studying the works written by foreign scholars.

Sanskrit words are a fascinating study. Sanskrit is known for being the most transparent language. Seven or eight words out of ten are crystal clear in the basic idea on which they have been founded. They embody the observations and the reactions of our forefathers to their surroundings.

The general word for a bird is पत्त्रिन् 'feathered'. Birds are conspicuously different from all other classes in that they possess feathers. This idea of a feathered creature was constantly before the mind's eye and hence besides पक्षिन् we have such other words as पक्षधर and पक्षालु. It was further extended to पक्षगम 'going with the help of feathers' and पत्त्रवाहन 'having feathers as the vehicle'. पत्र, the parent of English 'feather', and पतत्र, both from पत् 'to fly', and signifying 'feather' have yielded some more synonyms—पत्रिन्, पत्र-वाह, पत्रि-वाह, पत्र-रथ and पतत्रिन्.

Another designation of birds is द्विपाद 'biped'. अण्डज 'oviparous', द्विज 'born twice—once the egg and then the young one from the egg', द्विजाति, अनेकज were constantly used to signify a bird. But this characteristic is not an exclusive one. It is shared by birds with reptiles and other creatures.

तपस 'warm' is a curious epithet for a bird. Of course we know that the temperature of the body of a bird is 2 to 14 degrees higher than that of mammals. The high temperature is connected with the large pro-

portion of muscle, and the conservation of heat is secured by the nonconducting plumage.

शकुन or its synonyms शकुन्त, शकुनक, शकुनि, शकुन्ति are derived from the root शक् 'to be strong', the root from which we get the common words शक्ति 'power' and शक्र Indra 'the mighty'. One of the Vedic words for bird is वाजिन् 'powerful' from वाज 'strength'. These are highly expressive of the great invigoration of life which is contributed to birds by a supply of purely arterial blood pumped by the four-chambered heart.

With flight is connected the more lightly built skeleton, the sternum acquiring a keel for the insertion of the muscles of flight, the neck becoming long and supple and the beak taking on the work of a hand. This is beautifully expressed by the Sanskrit term त्रोटकहस्त (त्रोटक 'beak', हस्त 'hand').

नीडज, नीडोद्भव 'born in a nest', नीडिन् 'having a nest', वृक्षगृह, वृक्षावास, अगौकस्, नगौकस् 'making their homes in trees', तरुशायिन् 'resting on trees' and again कुलायस्थ 'nest-dweller' are popular epithets and are used as regular synonyms of पक्षिन्.

Insects, bats, birds and the extinct Pterodactyls in which a fold of skin was extended on the greatly elongated outermost or fifth finger, are all included in the term पतंग 'which move by flying'.

वा 'to blow' gives वायु, वात for 'wind' and a series of words for 'bird' वि, वी, वीक, वे, वयस्, वयस, वाय, वायस. From वि is derived the Sanskrit word for aerial car विमान 'made to the measure of birds'. The wings of birds combine the functions of propellers and planes.

The value of flight is obvious but it may be useful to recall some of the different ways in which it has justified itself in the struggle for existence. It gives its possessor a new safety and independence, expressed in the Sanskrit word यथेष्टचारिन्. It enables them to follow food and to seek water over long distances. It helps them to secure the well-being of their offspring by building nests in places often inaccessible except to enemies able to fly or climb. The power of flight has given to birds a unique power of annihilating distance, of evading the winter, of having two summers in the year, of having two homes, of changing their season in a night. In seeking out suitable feeding-places and breeding-places neither space nor time present obstacles to the flying bird.

Teeth are absent in modern birds. The Sanskrit poet has alluded to this feature by रसना-रद. Their absence is compensated for by the horny bill covering the jaws अस्थितुण्ड, कीकस-मुख, कीकसास्य (अस्थि- and कीकस- both signify 'bony'). It often has a sharp edge and a hooked tip; it varies from a massive crushing instrument in the toucan to a delicate probe in the humming bird. The variety of type should be considered in the light of the fact that the forelimb has been surrendered to making a wing, and that the bird's jaws have to discharge duties which in mammals usually fall to the hands. Hence the name त्रोटक-हस्त referred to before. It would be profitable to pursue a paragraph or two to realise the value of the bill as a hand.

A generalized bill may be illustrated by the crow and its allies—strong, pointed, somewhat triangular in section. Shortening, sharpening and curving of such a bill would yield the predatory type of hawk and eagle—quick to give the death-blow by piercing the skull or cutting the jugular vein, also well suited for rapid skinning and plucking, and for drawing out strips of flesh from the body. It is interesting to see an eagle deftly run down the backbone of a fish with its bill, dislocating the vertebrae. Somewhat of the same type are the bills of the owls and the parrots, though the former are carnivorous and the latter vegetarian. The parrot's beak has a movable hinge between the premaxillae and the front of the skull, and there are often strong file-like roughnesses to the inside of the bill, which serve in gnawing nuts or grinding hard seeds. Not very remote are the broadly conical strong bills characteristic of the finches, suited for breaking capsules and splitting seeds.

On another line are the delicate slender types, familiar in warblers, suited for dealing with small insects, with a climax in the elongated slender bills of humming birds. Not far removed, though used in a different way, are the elongated narrow bills of curlews, snipe, avocet and woodcock, for probing in mud, sand and the like. In a very different direction are the broad bills of ducks and geese, for sifting the mud and cropping vegetation, and on this line might be placed the broad bills of some storks and herons, and the spatulate type of the spoonbill. Also broadened out, but kept very short, are the insect-catching bills of nightjar and swift. A slight specialization of the rook-type leads to the sharp form of bill seen in snake-birds, herons and bitterns. Lateral compression in puffin and razor-bill reaches an extreme in the long, high knife-

blade of the skimmer (Rhynchops), a tropical relative of the terns. This bird flies very close to the surface and skims the water with the mandible which is longer than the upper jaw. When the knife edge of the mandible touches a small fish or crustacean it tilts the booty into the open mouth. The skimmer or scissor-bill is also said to skim soft mud. There are many strange types, such as that of the crossbill, where the points of the upper and lower halves of the beak cross one another when at rest, a position that occurs as an abnormality in some birds, such as crows. The peculiarity is utilized by the crossbill in the exceedingly rapid extraction of the seeds of fir-cones, a deft manipulation in which the tongue assists. In the wry-bill plover of New Zealand the bill is turned to the right-hand side, and it is interesting to notice that a one-sided twist is occasionally seen in an individual oyster-catcher. In the flamingo the whole beak is bent almost at right angles on itself, half-way down its length, and is thrust upside down into the mud, where it searches for small molluscs and the like. The kiwi is the only bird in which the nostrils open at the tip of the bill. In the huia, another New Zealand rarity, there is sex-dimorphism in the bill. According to Alfred Newton, the male uses his short, strong, almost straight bill to chisel holes in decaying wood where grubs may lurk, while the female uses her much longer, decurved and slender bill to probe into crevices. But when he, having discovered a grub in his excavations, is unable to reach it, she utilizes the opportunity.

अंगु and अंजस् (from अंज्, उणादि) imply intensity of motion. Going through the sky is a pet name of the Sanskrit poets and is expressed in various ways ख-ग (ख sky), खगम, खचर, खेचर, विहग, विहायस्, विहायस, विहंगम, विहग, विहंगक, द्युग (द्यु sky), द्योभूमि 'for whom the sky is the earth', नभश्चर, नभसंगम, अम्बरचर, उपरिचर, अभ्रग 'going among the clouds', गगनचर, गगनेचर, व्योमचारिन्, अन्तरिक्षग, अन्तरिक्षचर, आकाशचारिन्, आकाशग, वियच्चारिन्.

वातगामिन् 'going with the wind' is a significant designation. Besides ordinary flight, there is gliding—when the bird, having attained to a certain velocity, rests on its oars for a while; or having attained a certain height descends to the ground without any stroke of its wings.

वातगामिन् may also refer to the velocity of flight, 'going as quick as the wind'. The most accurate measurements of flight of birds have been made from aeroplanes on birds keeping level with the machine and flying in the same direction. Thus measured by Meinertzhagen, small song-birds show an average rate of 20-37 m. per hour, crows 31-45, ducks 44-59, plovers 40-51; but these may be increased in exceptional circumstances, and an occasional rate of 100 m. an hour is quite credible.

Sanskrit literature is full of bird-lore. In the Ṛigveda we read यो वेद वीनां पदमन्तरिक्षे पतताम् 'Varuṇa, who knows the paths of birds flying through the sky'. वीनां पदं reminds us of वणिक्पथ, नौपथ and पक्षिपथ 'the bird-migration routes'.

From पत् 'to fly', there is a host of words. That they all mean a bird is not certain. Some of them definitely signify, besides a bird, flying insects. The simplest formations are पतत्, पतम, पतंग, पतंगम and पतंगिन् 'those who go flying'. पत्र masculine or neuter, besides being used for a feather, signifies a flying creature as well. पतेर is still another word. उत्पत 'flying high or up'. There are three words which have been formed by the addition of desiderative suffixes—पित्सत्, पिपतिषु, पिपतिषत्. Here the desideratives might signify birds which are constantly on the wing.

The procedure followed in giving scientific names to birds is a simple one. If there be an ancient name of a species or subspecies, it is made the basis of the name of the genus (प्रजाति, and of the family if that be derived from the genus) to which it belongs, e. g., काक, the Common Indian House-Crow, yields काक-प्रजाति *Corvus*, the genus, and further काक-वंश *Corvidae*, the family.

In the trinomial system the Common Indian House-Crow, itself, is the subspecies *Corvus splendens splendens* सामान्य भस्मच्छवि काक. *Corvus splendens*, the species, is characterised by the ashy-brown colour of its nape, ear-coverts, head, upper back and breast. भस्म-छवि signifies the ashy-brown shade (भस्म ash, छवि colour). *Corvus splendens* भस्मच्छवि काक has four sub-species: *splendens*, *zugmayeri*, *insolens* and *protegatus*. The first, being the starting point, is designated by prefixing सामान्य 'common' to भस्मच्छवि काक. The second, third and fourth sub-species are distributed over Sindh, Burma and Ceylon respectively and hence are particularised by prefixing सिन्धु, ब्राह्म and लंका respectively. Thus—

Corvus splendens splendens सामान्य भस्मच्छवि काक
Corvus splendens zugmayeri सिन्धु भस्मच्छवि काक

Corvus splendens insolens ब्राह्म भस्मच्छवि काक

Corvus splendens protegatus लंका भस्मच्छवि काक

Each element of the Indian name is clear in connotation.

Some other species of *Corvus* काक are—

1 *Corvus corax* द्रोण काक (ancient word)

2 *Corvus levaillantii* कृष्ण काक (ancient word)

3 *Corvus frugilegus* संघचारी काक (संघचारी 'gregarious'—ancient word).

A species has one, two or more sub-species, of which many are found in a particular geographical zone, and hence defined by it. Thus—

Corvus levaillanti levaillanti सामान्य कृष्ण काक

Corvus levaillanti culminatus दक्षिण कृष्ण काक (found in दक्षिण Southern India)

Corvus levaillanti intermedius हिमालय कृष्ण काक (found in the Himalayas).

Alongside the Latin scientific names there are popular English names for every bird. The English names, at times, follow Latin closely, but often they follow a different line. They may even be binomial, while the Latin is trinomial—(Latin) *Oriolus trailli trailli*—(English) *Maroon Oriole.*

The English generic names are not necessarily co-extensive with Latin, e.g., *Pipit* covers *Anthus* and *Oreocorys.*

After long experience we decided to provide Indian words not only for Latin names but also for popular English names. Sanskrit language and literature are rich enough to serve both.

We have been able to use ancient words by the hundred (normally a specification to this effect is registered within parentheses). While doing so we had before us the European love for their past. Edmund C. Jaeger discussing the origin of biological generic names records :

"Apparently every name of an animal used in classical Greek has been made to do service in modern nomenclature".

He goes on further :

"And these have been modified until they form a large number of the designations in common use...

"A large number of names comprise derivatives and compounds of the same Greek or Latin words, These names may have different forms".

We, on our part, have not been able to use every Sanskrit name.

Sanskrit names are bearers of an imagery, all their own.

When, however, ancient names were not available, we followed the path of Pāṇini, Kātyāyana and Patañjali, and devised अन्वर्थ names, e.g.

चञ्चला *Fulvetta* (the birds of this genus are restless चञ्चल)

दीर्घ-पुच्छ *Heterophasa* (their tail पुच्छ is extraordinarily long दीर्घ)

भेक-मुख *Batracho-stomus* (the Greek word has been literally rendered into English 'Frog-mouth' and Sanskrit भेक-मुख)

मशकारि *Culici-capa* (*culicis* मशक, English 'Flycatcher'. अरि 'enemy')

वृक्ष-सर्पी *Certhia* (वृक्ष tree, सर्पी creeper)

हिम-चटक *Montifringilla* (they are all Snow हिम Finches)

सित-नयन *Zosterops* (they have a white सित ring round the eye नयन).

Modern names in North and South Indian languages have been of immense value.

MAMMALIA

In our work of finding Indian counterparts for the vast and varied scientific names, we have been greatly helped by the huge store of names recorded in our ancient literature: hardly is there a family or an important genus which has not been represented therein, as will be evident from the perusal of the explanatory notes that follow the suprageneric or generic names. For a single animal we have a variety of names which is unsurpassed by Greek and Latin singly or both combined.

In accordance with scientific requirements each mammal has a bi- or tri-nomial Latin designation in the West. In the present work ancient names have been fitted into the trinomial scheme.

Our method of naming is as follows. When there is an ancient word corresponding to the Latin or other European etymon, that is used as a base for the generic and supra-generic nomenclature derived therefrom. Thus, hyaena is तरक्षु, a word which occurs in the Vājasaneyi-Saṃhitā 24.40 and Maitrāyaṇīya-Saṃhitā 3.14.21, Rāmāyaṇa, Mahābhārata, Suśruta, etc. Its derivative *taras* is used in Marathi and Sindhi. Naturally, the genus *Hyaena* will be तरक्षु-प्रजाति, the family *Hyaenidae* तरक्षु-वंश. Similarly, *Herpestidae* the family of mongooses will be नकुल-वंश, its subfamily *Herpestinae* नकुलानुवंश (अनु- sub- + वंश family), its genus *Herpestes* नकुल-प्रजाति. From नकुल is derived Hindi नेवला, Kashmiri नूल, Assamese, Bengali नेउल. It may be noted that the Greeks seem to have had no word for 'mongoose', whence it has been designated as *herpēstēs* 'a creeping thing'. The species of the genus *Herpestes* have been named in our system after their characteristics: *H. edwardsii* which has a speckled (बिन्दुकित) pelage is बिन्दुकित नकुल. It has four sub-species. The sub-species "symbolize the geographical and environmental variants of a species". Hence they follow their distribution: *H. edwardsii nyula* is found in Northern India (उत्तर), so it is उत्तर बिन्दुकित नकुल. *H. edwardsii ferrugineus* is found mainly in the desert (मरु) districts of N. W. India: hence मरु बिन्दुकित नकुल; *H. edwardsii edwardsii* is सामान्य बिन्दुकित नकुल being the starting-point (सामान्य common); *H. edwardsii lanka*, the Ceylonese (लंका) Grey Mongoose, is लंका बिन्दुकित नकुल.

In Neo-Latin an adjective follows the noun it qualifies. For example, in astronomy, *Ursa major* and *Ursa minor* for Great Bear and Little Bear respectively; *corpora adiposa*, *corpora amylacea* in medicine; *acidum boricum*, *acidum nitricum*, *acidum tannicum*, *borax purificatus*, *aqua anisi concentrata* 'concentrated anise water', *aqua foenicula concentrata*, etc. etc. In taxonomy too, the specific element of a scientific name, which is an adjective or has an adjectival function, comes after the generic term. In the English names accompanying the Latin ones, the adjective precedes the noun it qualifies in accordance with English grammar, e.g. *Talpa micrura* (*micr-* 'small'+*ura* '-tailed') is the Short-tailed Mole, *Talpa leucura* (*leuc-* 'white'+*ura* '-tailed') is the White-tailed Mole, *Soriculus macrurus* is the Long-tailed Shrew (*macr-* 'long' + *urus* '-tailed'), *Crocidura leucogenys* (*leuco-* 'white' + *genys* 'cheek') is the White-cheeked Shrew, *Chimarrogale himalayica* is the Himalayan Water-Shrew.

In the Indian nomenclature, the genus-species sequence is the adjective-noun one, in keeping with our grammatical structure:

Erinaceus megalotis महाकर्ण जाहक (*megal-* महा + *-otis* कर्ण; जाहक is from Varāhamihira's Bṛhatsaṃhitā and from it is derived its Sindhi name *jaho*).

Similarly the following species of the genus *Cynopterus* बभ्रुपत्र-प्रजाति—

C. marginatus दीर्घकर्ण बभ्रुपत्र (characterized by long दीर्घ ears कर्ण)

C. brachyotus लघुकर्ण बभ्रुपत्र (*brachy-* लघु + *-otus* कर्ण)

C. brachysoma पीन बभ्रुपत्र (*brachy-* short + *soma* body. The body is very short and thick पीन. Its popular English name is the Thick-bodied Fruit-Bat).

Latin specific names have often an English name. In many instances, names of persons are replaced by a descriptive term in English: *Vesperugo leisleri* is the Hairy-armed Bat, *Mus berdmorei* is the Grey Rat, *Mus blanfordi* is the White-tailed Rat, *Mus jerdoni* is the Bicoloured Rat, *Mus gleadowi* is the Sand-coloured Rat *Nesocia hardwickei* is the Short-tailed Mole-Rat. Such English names have been of great help to us in replacing meaningless personal names by significant characteristics and avoiding unnecessary burden of *eponyms*. Throughout we have taken pains to see that our names reflect scientific observations in a greater measure than Latin or English ones. It will be interesting to note that in revising and systematizing the terminology in medicine, eponyms are being replaced by significant terms. To quote Prof. O. H. Perry Pepper, Medical Etymology (Philadelphia, 1949):

"Unfortunately for all of us, eponyms are very numerous in medical terminology. Taken out of any historical context they are meaningless, and hence hard to remember. Medical terminology is bad enough without the added burden of eponyms. The bacterial cause of typhoid fever can be easily remembered as long as the organism is named the *Bacillus typhosus*, or even more easily if we discard the Latin terms, but to christen this same bacterium with the diminutive eponym

Eberthella is just making trouble for countless students yet unmatriculated. It may be very proper to honor the discoveries of Eberth, Salmon, Bruce, Shiga, Escherich, and Nocard, but it is tough on the student.

"Most eponyms perpetuate the name of the discoverer or the first describer of some structure or phenomenon, but few survive long for this reason alone. *As a rule, an eponym remains in use only if no satisfactory term can be found to take its place.* For example, no brief adequate term has ever been suggested to describe all that is conveyed by the ancient eponym "Hippocratic facies", with the sunken cheeks and pinched nose of the terminal moribund state. Nor have good substitutes come forward to push many of the anatomical eponyms into the discard. Fallopio (1523-1562) and Eustachio (1520-1574) still plague us with their respective tubes. The term "Broca's area" also is no help with our medical speech.

"Eponymic titles are given to diseases only for lack of something better. The name Bright's disease persisted longer than it should have, and the name Hodgkin's disease is still used because of our ignorance, in spite of the cumbersome substitutes suggested. *Such eponyms persist and defy the advance of knowledge, but must always lose out in the end, when science learns enough to justify the coining of some appropriate term. Often an eponym is a clear indication of our ignorance, and constitutes a challenge to the investigator to rid our terminology of one more eponym. Any disease designated by an eponym is a good subject for research.*

"Eponyms also open the way to confusion. Some term a certain condition Graves' disease, others call it Parry's disease—both names had best be relegated to the histories of medicine. The supraclavicular node, enlarged by neoplastic metastasis, is in some parts called the Ewald, the Belin, or the Virchow node. Why not discard them all and adopt the other term—the signal node? Then there are two different Addison's diseases, and several conditions named after Sir James Paget.

"Our vocabulary of eponyms is constantly changing: some are dying, others are being born. A few apparently are going to live forever—caesarean and roentgen, for example. One might guess that the tetralogy of Fallot would have a long life, for the condition defies a short descriptive name. On the other hand, we should soon be rid of Gaucher's disease, Banti's disease, and many others, including the many so-named muscular dystrophies. In fact, the author likes to hope that fewer eponyms are forced on the student today than had to be learned in his student days; the eponyms of the eye signs of thyroid disease, and Niemeyer's pill and Niemeyer's dictum, are gone, among others". (pp. 11, 12)

If English eponyms are "tough" on the English student how much "tougher" are they on the Indian student !

Besides the eponyms, we have the toponyms which are based on the names of countries, mountains, towns, rivers, etc. They are not confined to subspecies. They are extended to species too.

Geographical and personal names are not a scientific necessity. It is a matter of convenience. Latin may have them, English may not, and vice versa. While we have used geographical names, such as are known to our literature and people, we have found descriptive words more intelligible than foreign toponyms.

Our civilisation was developed in the midst of tropical nature. Our forefathers had deep love and keen observation of their surroundings. Such words as व्याघ्र, सिंह, द्वीपी, वृक, हलीक्ष्ण, तरक्षु, लोपाश, कशीका, छगल and गो, go back to the earliest period of our documented history, namely the Vedic scriptures. Our lexicons, ancient and mediaeval are rich in faunic names.

In the West names have been derived from Greek and Latin. It is the duty of the Indian scientist to take care of the achievements of his race, to lift them out of oblivion and to bring them to life.

Majority of our generic and suprageneric terms are based on ancient names: *Hylobatidae* (family) शाखामृग-वंश (शाखामृग occurs as early as the महाभारत), *Colobidae* (family) लांगूलि-वंश (लांगूली is an ancient word), *Kasi* (genus) कीश-प्रजाति (कीश occurs in पञ्चतन्त्र, भागवतपुराण and the रामचरितमानस of तुलसीदास). The genus *Nycticebus* is हीकु-प्रजाति, हीकु being a synonym for loris in शब्दरत्नाकर and अभिधानचिन्तामणि, while its related genus *Loris* is designated by लज्जालुक, another term from the शब्दरत्नाकर. So also the genus of the snow-leopard *Uncia* has an ancient name चित्रव्याघ्र-प्रजाति. In the same way पिण्डारक-प्रजाति for *Neofelis*, हलीक्ष्ण-प्रजाति for *Lynx* (हलीक्ष्ण occurs in the तैत्तिरीयसंहिता), चित्रक-प्रजाति for *Acinonyx* (from चित्रक is derived the Hindi word चीता). The family *Mustelidae* is कुमारी-वंश, कुमारी occurring in the वैजयन्ती-कोष, which is rich in faunic names. The family *Tapiridae* is लुलाप-वंश, लुलाप

being from the अमरकोष. Again, the genus *Nemorhaedus* derives its name गोकर्ण-प्रजाति from गोकर्ण used in the famous medical works of Caraka and Suśruta. These instances will amply illustrate to what extent we have been fortunate in being the inheritors of a literature singularly rich in the observation of nature.

We have made use of synonyms to designate different genera:

मर्कट-(प्रजाति)	*Trachypithecus*
प्लवंगाः	*Cynomorpha*
कीश-(प्रजाति)	*Kasi*

Out of twenty generic and suprageneric names in the Primates for only these three have we had recourse to synonyms. The rest are image-delineations within the limits of two to five syllables.

Identification of ancient names has not always been easy. There are those about which there is no difference of opinion, while there are many others which had to be identified anew. Here lexicons, commentaries and modern Indian languages have come to our help.

A few important words of Greek and Latin go back as genetic relatives of Sanskrit which, incidentally, is far older and richer than either Greek or Latin or even both taken together, e.g. *panther* is Sanskrit पुण्डरीक, *otter* is उद्र, Lat. *ovis* is अवि. From them have been formed: *Pantherinae* पुण्डरीकानुवंश (अनुवंश subfamily), *Panthera* (genus) पुण्डरीक-प्रजाति, *Panthera pardus* पृदाकु पुण्डरीक, *Ovis* (genus) अवि-प्रजाति. Weasel is akin to Sanskrit विस्र, from which we get its name विस्रा with the specificatory feminine suffix. Greek *pardos* has been connected with Sanskrit पृदाकु by Webster, while the prefix *pro* is etymologically the same as Sanskrit प्र. Hence *Pardo-felis* and *Pro-felis* are respectively translated into Sanskrit पृदाकु-विडाल and प्र-विडाल.

Latin *ursus* and Greek *arktos* are the same as Sanskrit ऋक्ष. Hence the series:

Ursidae	ऋक्ष-वंश
Ursus	ऋक्ष-(प्रजाति)
Melursus	मन्दऋक्ष-(प्रजाति)
Selenarctos	वनऋक्ष-(प्रजाति)
Helarctos	शाखाऋक्ष-(प्रजाति)

Several ancient names have come down to us in a changed garb in modern Indian languages. These words have enabled us to identify ancient names and to avail of them in the present nomenclature. A few instances will suffice: Hindi कसिया is from कशीका which occurs in the ऋग्वेद. From it we get the subfamily *Martinae* कशीकानुवंश, and the genus *Martes* कशीका-प्रजाति. Sindhi *jaho* gives us the identification of जाहक 'hedgehog', from which we have जाहक-वंश *Erinaceidae*, जाहकानुवंश *Erinaceinae*, and जाहक-प्रजाति *Erinaceus*. The genus *Pteropus* is वाग्गुद-प्रजाति, its family वाग्गुद-वंश. वाग्गुद is from मनुस्मृति and it is found as the second member of the Marathi compound-word वटवाघूल. The genus *Rhinoceros* is गण्डक-प्रजाति, its family *Rhinocerotidae* गण्डक-वंश; from गण्डक is derived Hindi गेंडा. In Assamese *deo-chagal* is used for the Goral, for which it has been retained.

Here we may also point out a few instances where Sanskrit equivalents have derivatives in modern Indian languages:

Acinonyx (Gk. *akaina* 'thorn' + *onyx* 'claw') चित्रक-प्रजाति (from चित्रक is derived Hindi चीता).

Herpestes नकुल-प्रजाति (from नकुल is derived Hindi नेवला).

In cases, where a Latin scientific name is based on a distinctive characteristic, the same has been made the basis of the Indian name. The group Mammalia स्तनिवर्ग itself is an example of the isonymic principle, Lat. *mamma* 'breast' स्तन. Catarhini is a group having nostrils directed downward (*cata-* down अधो + *rhinos* 'nose' नास + group समूह) which gives its Indian equivalent अधोनास-समूह. Similarly, the section Anthropo-morpha containing the Man-like Apes is नररूपाः (नर- corresponding to *anthropo-* and रूपाः to *-morpha*). In the genera *Pardofelis* and *Profelis* Lat. *felis* 'cat' is विडाल, Gk. *pardos* 'panther' is Sanskrit पृदाकु (see Webster) and Gk. *pro* is Sanskrit प्र; so the two are respectively पृदाकुविडाल and प्रविडाल. The genus of the Vampire Bats, *Megaderma* is composed of Gk. *mega-* 'great' विशाल and *derma* 'skin, leather' पत्र 'wing'; so its Indian name is विशालपत्र-प्रजाति (प्रजाति genus). The genus *Synotus* is from *syn-* 'together' युक्त + *otus* 'ear' कर्ण, its ears being united at the base (युक्तकर्ण-प्रजाति). Similar is the relationship of तनुकर्ण-प्रजाति to *Microtus* (genus): *micro-* तनु + *-otus* -कर्ण. *Tetracerus* the genus of the Four-horned Antelope, is the derivationally identical चतुःशृंग-प्रजाति (*tetra-* चतुः + *cerus* शृंग).

Besides the above two categories of archeonyms or words based on their ancient Indian name, and isonyms or words having the same etymological basis as the Latin word, there is another category, the euonyms, which represent an improvement on the Latin name, being more expressive and suitable than the latter.

They clearly bring out the characteristic feature. नर-वानर-गण, the euonym for Primates defines the scope of the order in an unambiguous manner viz. that it includes नर 'man' and वानर 'monkey'. The genus *Presbytis* derived from Greek *presbytis* 'an old woman' indicates no precise feature of the animal, while our word श्वेतोरु-प्रजाति immediately gives clue to the fact that the inner side of the thigh ऊरु is conspicuously white. The Indian equivalent नखाकोचि-अनुगण for the suborder *Aeluroidea* gives the predominant characteristic of its having retractile claws. *Carponycteris* is दीर्घजिह्व-प्रजाति which at once brings out its main feature of having a long tongue. The genus of Leaf-nosed Bats, *Hipposiderus* is पुष्पनास-प्रजाति, a word which graphically portrays the more or less square or oblong and complicated noseleaf looking like a flower-like appendage on the nose. *Pecora* is the plural of Latin *pecus* 'cattle', which is akin to Sanskrit पशु. It connotes the typical (प्र) ruminants and is hence प्ररोमन्थिनः (√रोमन्थ् 'to ruminate'), a better defined and more expressive term.

In the Latin terminology, several widely separated genera are distinguished only by an easily confusable spelling- or gender-differentiation. Such confusions are absent from the Indian system. For instance, the genus of weasels is *Mustela* and the genus of dogfishes *Mustelus*, the family of both being spelt alike: *Mustelidae*. Another glaring instance of such confusion is afforded by the homo-etymonic genera *Peramus* and *Peramys*, which belong to entirely different subclassses, the Pantotheria and Metatheria respectively; two separate words have been provided for them in the Indian terminology. To take yet another instance of two generic names, distinguished only by a tantalizing difference in spelling: *Hemigalus* and *Hemigaleus*. The former is a genus of palm-civets whence termed तरुपूतीक-प्रजाति (पूतीक for civet occurs in the कल्पद्रुकोष), while the latter is a genus of sharks, the सामिग्राह-प्रजाति.

Our terms are self-explanatory.

Hylobatidae (Gk. *hyla* 'wood' + *bates* 'climber' + *-idae* 'suffix for the family') शाखामृग-वंश.

Cercopithecidae (Gk. *kerkos* 'tail' + *pithekos* 'ape' + *-idae*) पुच्छकपि-वंश.

Otocolobus (Gk. *otos* 'ear' + *kolobos* 'mutilated, stunted') लघुकर्ण-प्रजाति (genus प्रजाति characterized by having short लघु ears कर्ण).

Arctomys (Gk. *arktōos* 'northern' + *mys* 'mouse' from Sanskrit मूष) हिममूष-प्रजाति (found on high altitudes: हिम 'snow').

Perissodactyla (Gk. *perissos* 'odd' + *daktylos* 'finger') विषमांगुल-अनुगण (विषम 'odd' + अंगुल 'toes' + अनुगण 'suborder').

Artiodactyla (Gk. *artios* 'even') समांगुल-अनुगण (सम 'even').

The minutiae of the Western terminology have been duly attended to: the genus *Cervus* is महामृग-प्रजाति, while the diminutive *Cervulus* is क्षुद्रमृग-प्रजाति.

In several cases, an exclusive characteristic has been made the basis of naming a species. *Macaca speciosa*, the Stump-tailed Macaque, is distinguished by the shortness of the tail, which is reduced to a conical, sparsely hairy stump स्थूण—hence स्थूण-पुच्छ कोशमुख.

A few more examples of the Indian names being more significant in as much as they incorporate the distinguishing features in themselves. The arboreal and terrestrial families of Shrews, the *Tupaiidae* and *Soricidae* are readily recognizable in तरुचुंचु-वंश and भूचुंचु-वंश (चुंचु 'shrew' occurs in the हारावलीकोष). Similarly in *Hystricidae* and *Erethizontidae* which are respectively भूशल्यक-वंश and तरुशल्यक-वंश. In the same way a number of vague and ill-defined Latin words have been made more precise in our system by including the essential part of the definition. In Simplicidentata and Duplicidentata, Lat. *dentis*, which means any 'tooth', has been particularised by कृन्त which stands for the incisors. अदन्ततिमि-अनुगण and सदन्ततिमि-अनुगण bring out the difference between the two suborders Mystacocoeti and Odontocoeti far more accurately. In the heterogeneous order Edentata there are 'very few structural characters common to all the different suborders included in it, except the absence of teeth in the front of the jaw' (W. T. Blanford, Mammalia, 1888-91, p. 595). This common feature is well brought out in the Indian अनग्रदन्त-गण thus rendering it superior to its English name (fr. Lat. *edentatus*, past part. of *edentare* to render toothless) which 'is a misleading one as most of them have teeth' (Webster's New International Dictionary, second ed., 1948).

In the matter of the bases of nomenclature, English follows its own line, only here and there conforming to the internal structure of the Latin designation. Even in matter of toponyms and eponyms, i.e. personal and geographical names, English shows scanty

respect to Latin. Here are a few examples:

Canis aureus: The Asiatic Jackal.
Latin means "golden dog".

Hyaena hyaena hyaena: The Indian hyaena.
English has got rid of the hideous tautonym.

Synotus darjelingensis: The Eastern Barbastelle.
Here Darjeeling has been replaced by a more general term Eastern. In the previous examples, the geographical attributive had commended itself more to English than to Latin.

Vesperugo ceylonicus: Kelaart's Bat.
English replaces a toponym by an eponym.

Vesperugo blanfordi: Limberg's Bat.
The "honour" has shifted from one person to another.

Pantholops hodgsoni: The Tibetan Antelope.
The "honour" conferred on Hodgson by the Latin nomenclator has been taken away and the eponym replaced by a toponym.

Lepus tibetanus: The Afghan Hare.
This is a case of an exchange of toponyms.

While the main purpose of our terminology is to provide Indian terms so as to make the spread of scientific knowledge possible, we have not failed to correct the confusion and inaccuracies of the European nomenclature. We have taken advantage of standing on the shoulders of our European predecessors and thus having a longer range of view, and fresh courage to bring order.

Ancient Names of Some Common Mammals

antelope, deer हरिणः, हरिणकः, कुरंगः, कुरंगकः, कृष्णतारः, मन्थरः, मयुः, वानायुः, वातायुः, अजिनयोनिः, रिश्यः, ऋश्यः, वातमजः, वाताटः, न्यङ्चंकुः (वाजसनेयि-संहिता, महाभारत), भीरुहृदयः, भीरुचेतस्, नित्यशंकिन्, चारुलोचनः, सुनयनः, सुलोचनः, कुलंगः (मैत्रायणी-संहिता), कुरंगः, चलनः, कुलुंगः (वाजसनेयि-संहिता), शशः (ऋग्वेद), महाजवः, मरुः, मरुकः, क्रव्यघातनः, कुरंगमः, मृगः, कृष्णः (ऋग्वेद), प्लवंगः, प्लाविन्, हर्षुलः, पल्लवादः, दिवौकस्, व्याधभीतः, कौटिलिकः (कादम्बरी), चञ्चुः, वनस्थः, लिगुः, सारंगजः।

ape, monkey कपिः, वानरः, वनरः, मर्कः (भागवत-पुराण), मर्कटः, मर्कटिका, लांगूलिन्, प्लवंगः, शाखामृगः, नगाटनः, बाहुकः, फलभुज् (प्रसन्नराघव), पारावतः, प्रवगः, प्रवंगः, प्लवंगः, प्रवंगमः, प्लवः, प्लवगः, प्लवंगमः, प्लवनः, कलिप्रियः, नखायुधः (रामायण), दधिशोणः, दिव्यचक्षुस्, लतामृगः, वलीवदनः (मालतीमाधव), वलिमुखः, तरुमृगः, द्रुमवासिन्, वृक्षचरः, विभ्रान्तः, विपिनौकस्, कुठारुः, किरिवः, कुषाकुः, कषाकुः, कुशाक्षः, हरिन् (रामायण), हरिः (रामायण), हर्यक्षः (रामायण), कीलुषः, जम्बुमत्, जम्बूमत्, वनौकः, वनौकसः, वृक्षौकस्, काननौकस्, भल्लुकः, भल्लूकः (महाभारत), रामदूतः, विटपिमृगः, कीशः (भागवत-पुराण), झम्पाकः, झम्पिन्, पिंगाक्षः (रामायण), पिंगलः, महावेगः, उत्तालः।

ass गर्दभः, भारवाहः, रूक्षस्वरः, लिम्पाकः, शंकुकर्णः, शंकुश्रवणः, भारसहः, चक्रीवत्, चक्रिन्, चिरमेहिन्, शुद्धजंघः, ग्राम्याश्वः, भूरिरामः, रेणुरुषितः, शलः, पशुः, उपक्रोष्ट्र (भागवत-पुराण), हरः, दशेरकः, दस्रः, रासभः, निघृण्वः, वासतः, रमणः, वाहः (ऋग्वेद), धूसरः, धूम्रकर्णः।

boar, hog, pig सूकरः, वराहः, घोषिलः (निघण्टुप्रकाश), घृष्विः (उणादिसूत्र), गृष्टिः, घोणान्तभेदनः, घोणिन्, चक्रदंष्ट्रः, चक्रमुखः, चक्ररदः, सलिलप्रियः, स्तब्धरोमन्, क्रोडः (पञ्चतन्त्र), आखनिकः, वराहुः (ऋग्वेद), आरुः, आखुः, शूकरः, पीतस्कन्धः, दारकः, दीर्घायुधः, दीर्घरदः, दन्तायुधः, पोत्रायुधः, निरामयः, दृढलोमन्, स्तब्धरोमन्, बालिन्, बहुप्रजः, बह्वपत्यः, बहुसु, मदारः, मार्तण्डः, भूक्षित्, भूदारः, मुस्तादः, मुखलांगलः (हरिवंश), मार्तण्डः, वनाहिरः, वज्रदन्तः, वज्रदशनः, वज्ररदः, वक्रवक्त्रः, वक्त्रदंष्ट्रः, वनच्छागः, रोमशः, भेदनः, सूचिरोमन्, कुमुखः, किरः, किरिः (उणादिसूत्र), कीकटिन् (निघण्टुप्रकाश), जलसूकरः, जलप्रियः, कोलः, काकोलः, कामरूपिन्, किटिः (कौशिकसूत्र), तलेक्षणः, पंकक्रीडः, पंकक्रीडनकः, विषाणवत्, शयथः, पृथुस्कन्धः, स्थूलनासिकः, स्थूलनासः, पोत्रायुधः, खेटः, शिरोमर्मन्, शूरः।

buffalo महिषः, रजस्वलः, हेरम्बम् (मालतीमाधव), अश्वरिपुः (भावप्रकाश), अश्ववारणः, अश्वशत्रुः, घोटकारिः, अश्वारिः, विषज्वरः, कालवाहनः, कालीतनयः, कासरः, कलुषः, अनूपः, स्कन्धशृंगः, वाहरिपुः, वाहद्विषत्, मत्कुणः, मत्तः, रक्ताक्षः, अश्वरिपुः, हयद्विषत्, वालधिप्रियः, बलिन्, न्यक्षः, पिंगः, पृष्ठशृंगिन्, दोलितः, धीरस्कन्धः, नालिकः, तुरंगारिः, दंशभीरुः, दंशभीरुकः, जरन्तः (उणादिसूत्र), हंसः (वराहमिहिर), हंसकालीतनयः, सैरिभः (हर्षचरित), सरस्वत्, वीरस्कन्धः, महः, लुलापः (चतुर्वर्गचिन्तामणि), धूर्तनर्तकः, लुलायः (बालरामायण), लाविकः, लालिकः, क्रोधिन्, कक्षः।

bullock बलदः (कथासरित्सागर), धुर्यः, वक्षस्, भद्रः, वृषभः, ऋषभकः, पुंगवः (लाट्यायन), शक्वरः (हर्षचरित), अनडुह्, बालिवर्दः, उक्षाणः, उक्षत्, ककुदिन्, शीभ्यः, शृंगिन्, सौरभेयकः, सौरभेयः (वाजसनेयि-संहिता), सहरिः, वराहः, वंसग (ऋग्वेद), रोहिणीरमणः, शक्करिः, शंकः, स्थिरः, स्थूरः, बाहुलेयः, गर्गः, गोनाथः, गोनृ, गोपतिः, गोभर्तृ, गोवृषः,

गोवृषध्वजः, गोवृषभः, अघ्न्यः, वृष्णिः, वोढ्, कर्मकारः, उस्रः (ऋग्वेद), उस्रियः (ऋग्वेद), गवेन्द्रः, गवीशः (वोपदेव २.१५), गवांपतिः, गवराजः, गन्धमैथुनः, सुरभिपुत्रः, सुरभितनयः, वित्सनः, वाहः (ऋग्वेद), शिववाहनः, शाक्वरः (हर्षचरितसार), शांकरः, शाद्वलः, आटीकरः, प्रोष्ठः (काशिका ५.४.१२०), भरण्डः, हन्तुः, सधिः, शिखिन्, वृषः, वृषन्, गोराजः, गोपतिः, वाध्रीणसः, वाध्रीणसकः, वाडवेयः, निषधः, बलिन्, बरीवर्दः।

cow धेनुः, शक्वरी, धेनुका, गु, गो, महा, उषा, उस्रा, उस्रिया, भद्रा, तम्पा, तम्बा, निलिम्पा, निलिम्पिका, पावनी, पीवरी, वैदेही, बहुला, अही (नैघण्टुक), सुरभितनया (मेघदूत), इडा, कल्याणी, शुभा, शृंगिणी, सौरभी (महाभारत), सौरभयी (महाभारत), सरस्वती (वाजसनेयि-संहिता), अघ्न्या, अनडुही, अनडाही (पाणिनि), जगती, गोपोतलिका (पतञ्जलि), माहेयी, माहेन्द्री, माहा, महीलुका (अथर्ववेद), मही (ऋग्वेद), मातृ (महाभारत), सौरी (चतुर्वर्गचिन्तामणि)।

goat छागलः, छागलकः, बर्करः, स्तभः, बुक्कः, बस्तः, पादचतुरः, पादचत्वरः, पशुः, अल्पायुस्, पयस्वलः, पर्णभोजनः, परिक्रमसहः, वल्गुः, लम्बकर्णः, मेनादः, मेकः, मेध्यः, लघुकायः, शिवप्रिया, स्तुनकः, स्तुभः, केशटः, शुभः, स्थवः, छगलकः, छेलकः (भावप्रकाश), तभः, स्तभः, अजर्षभः (शतपथ-ब्राह्मण), छगः, छागः, छगलः, लम्बकर्णः, गलस्तनी, गलेस्तनी, अजा, चुलुम्पा, आजा (शतपथ-ब्राह्मण), छागा, छागी, छागिका, पयस्विनी, संजा, सर्वभक्षा।

elephant हस्तिन्, करिकः, गजः, द्विपः, करेणुः, स्तम्बेरमः, अनेकपः (रघुवंश), इभः, दन्तावलः, वारणः, कुञ्जरः, दन्तिन्, मातंगः, मतंगः, प्रस्वेदः, कपिः, कञ्जरः, कञ्जारः, कटिन्, वारीटः, समाजः, कम्बुः, रक्तपादः, मरालः, महाकायः, विलोमरसनः, महानादः, अन्तस्वेदः, भार्गवः, महामृगः (रामायण), वेदण्डः, विषाणिन् (हरिवंश), विषाणकः, वेगदण्डः, मतंगजः, मत्तकीशः, मदकलः, लतारदः, वनजः, वरांगः (दिव्यावदान), लिंगिन्, लम्बकर्णः, वाहनम् (ऐतरेय-ब्राह्मण), वितण्डः, शुण्डिन्, शुण्डालः, सामोद्भवः, सामयोनिः (रघुवंश), सामजः, सामजातः (शिशुपालवध), सारंगः, स्त्रीध्वजः, शृंगिन्, शृंगारिन्, सुप्रतीकः (पराशर-स्मृति), शद्रि, शत्रि (उणादिसूत्र), अथरी (ऋग्वेद), मितंगमः, हस्तिकः, सद्रिः, सूचिकाधरः, सत्त्रिः, षष्टिहायनः, सिन्दूरतिलकः, सिन्धुरः, सिवरः, चदिरः, चन्दिरः, करटिन्, कालिंगः, कफिन्, कार्णिकिन्, कूचः, शक्वन्, शक्रि, शिरस्तापिन्, शूर्पकर्णः, शूर्पश्रुतिः, स्थूलपादः, अंगूषः, चक्रपादः, जलकांक्षः, जलकांक्षिन्, जर्तुः (उणादिसूत्र), दण्डवालधि, दिवौकस्, दीर्घवक्त्रः, दीर्घपवनः, दीर्घमारुतः, नर्तकः, रणमत्तः, रसिकः, नगरघातः, नगजः, नागः, द्विहन्, द्विरदः, द्विपायिन्, द्विदन्तः, द्रुमारिः, पीलुः, पद्मः, पद्मिन्, पृदाकुः, पेचकिन्, पेचिलः, पुण्ड्रकेलिः, पिचिलः, पिण्डपादः, पिण्डपाद्यः, पञ्चनखः, निर्झरः, पुष्करिन्, रदनिन्, रदिन्, राजिलः, राजीवः, बृहदंगः।

gayal गोमृगः (वाजसनेयि-संहिता), गवाल्कुः, गोतुल्यः।

lion सिंहः, केशरिन्, केसरिन्, मृगराज्, मृगराजः, मृगरिपुः, मृगाधिपः, मृगाधिराजः, मृगारिः, मृगारातिः, मृगाशनः, मृगेन्द्रः, नखायुधः, नखरायुधः, द्विपारिः, द्विरदान्तकः, पञ्चनखः, बहुबलः, पलंकषः, पशुराजः, सिन्धुर-द्वेषिन्, हस्तिकक्ष्यः, शृंगोष्णीषः, गणेश्वरः, मृगप्रभुः, पञ्चास्यः, भारिः, हर्यक्षः, हरिः, हरित्, हरितः, हरिणाधिपः, हरिणारिः, हरिणेशः, हेमांगः, इभारिः, इभमाचलः, शैलेयः, व्यादीर्णास्यः, व्यालः, शैलाटः, शूरः, शार्दूलः, जटिलः, करिदारकः, करिमाचलः, मुक्तचक्षुस्, विक्रान्तः, विक्रमिन्, विसंकटः, अरण्यराज्, कलंकषः, कण्ठीरवः (पञ्चतन्त्र), कण्डारवः, सुगन्धिकः, सकृत्प्रजः, नदनुः, नभःक्रान्तिन्, दीप्तपिंगलः, पारीन्द्रः, नखिन्, केशिन्, सटांकः, गजारिः, सारंगः, वनराजः, गन्धोष्णीषः, रक्तजिह्वः, मृगेश्वरः, मरुत्प्लवः, महानादः, सुगन्धिः, नगौकस्, क्रव्यादः-श्वेतपिंगः, श्वेतपिंगलकः, गर्जितासहः, मृगद्विष्, महावीरः, मृगपतिः, भीमनादः, भीमविक्रान्तः, पञ्चमुखः, पञ्चवक्त्रः, पञ्चशिखः, पञ्चाननः।

The Chinese System

Chinese is an ancient language. Its present written characters go back to three thousand years. The written characters are its essence; much more than in any other language. They do not record the sound. Writing is on the whole independent of the sound. Still, every written character has to be pronounced. The pronunciation changes from locality to locality but the written symbols remain the same.

There are forty thousand written characters. Three thousand are common. Making new words often means making new characters. One character means one word. Every word is only one syllable, as Chinese language along with Tibetan, Burmese, Thai and others is monosyllabic.

Grammar plays little part in Chinese. The syntax and the context usually determine whether a particular word is a noun, adjective, verb or adverb.

For one century, particularly since the rise of the modern newspapers, the Chinese have been creating new words with great rapidity. How they do it will be illustrated in this section.

ATOMIC ENERGY

We shall start with taking examples from a publication of the United Nations. It is a glossary of technical terms concerning atomic energy. It was issued in March 1948. Alongside English, French, Russian and Spanish it gives Chinese terms. Chinese is the only Asian language recognised for use at the United Nations.

atom 原子 *yüan - tzu*
origin - child

autunite 鈣鈾雲母 *chich yu - yun-mu*
calcium - uranium - mica

beryllium 鈹 *p'i.* The character is composed of two parts, the first gives indication of the meaning and the second gives the sound. This is a normal method in the composition of characters. The two parts exist independently also. The first is pronounced 金 *chin.* When standing alone it means gold. As a radical, which enters into composition of other characters, it denotes a metal. 皮 *p'i* represents the initial of Sanskrit वैडूर्य *vaiḍūrya*, a word that has reached all parts of the world. See our note on beryllium, page 122b. Standing by itself the character means leather.

cyclotron 循環器(磁共鳴加速器)

		hsün - *huan* - *ch'i* - (*tzu* - *kung-ming* - *chia-su* - *chi*) follow - circle - instrument - (magnetic - resonance - accelerate - implement) circuit
electron	電子	*tien* - *tzu* electricity - child
gas	氣體	*chi* - *ti* gas - body air - form
	OR 氣	*chi* gas
isotope	同位元素	*tung* - *wei* - *yuan-su* same - position - element
magnetron	磁控(電子)管	*tzu* - *kung* - (*tien-tzu*) - *kuan* magnetic - control - (electron) - tube
molecule	分子	*fen* - *tzu* divide - child
neutron	中(和)子	*chung* - (*ho*) - *tzu* middle - (harmony) - child neutral - (mild) - child
nucleus	(原子)核	(*yüan-tzu*) - *ho* (atom) - seed-stone
	OR 核子	*ho* - *tzu* seed-stone - child
photon	光子	*kuang* - *tzu* light - child
pitch-blende	瀝青鈾礦	*li* - *ching* - *yu* - *kuang* to trickle - blue - uranium - mineral pitch
positron	正子(正電子)(陽電子)	*cheng* - *tzu* (*ching* - *tien-tzu*) (*yang* - *tien-tzu*) upright - child (positive - electron) (male - electron) positive (male) (positive)
proton	質子	*chih* - *tzu* material - child
radioactivity	放射現象	*fang* - *she* - *hsien* - *siang* release - shoot - present - condition radiating phenomenon
radium	鐳	*lei*

relativity 相對論 *hsiang* - *te* - *lun*
mutual - opposite to - theory
relative

The Chinese Government has recently issued glossaries of several natural sciences. We shall take examples from them.

CHEMISTRY

化學物質命名原則

hua - *hsueh* - *wu* - *chih* *ming* - *ming* - *yüan* - *tse*
change - knowledge - articles - material to give - name - origin - principle
chemistry substance

" Basic principles for giving names to chemical substances ".

It was published in August, 1953. It discusses chemical nomenclature chapter by chapter. It is the only volume in the series which is not arranged alphabetically.

The second chapter deals with names of elements.

Hydrogen 氫 *ch'ing.* The character has two components, the first is 輕 *ch'ing* 'light', the second is 氣 *chi* 'gas'. If one looks carefully one would notice that the character for hydrogen has retained a part of *ch'ing* and a part of *chi.* A new character has been brought into being. Clipped *chi* is a counterpart of the English suffix *-on.*

Boron 硼 *p'eng.* Its first constituent 石 is the radical for 'stone'. It has no counterpart in English element names. This radical appears in several other names, such as carbon, silicon, phosphorus, sulphur. It remains unpronounced.

Carbon 碳 *t'an*
coal

Nitrogen 氮 *tan*
thin (not thick) . The full form of *tan* is 淡. Note clipped *chi* 氣 'gas', as in hydrogen.

Oxygen 氧 *yang.* nourishing — The full form of *yang* is 養. Note the clipped *chi* ' gas '.

Phosphorus 磷 *lin.* Note the radical ' stone ' which denotes a mineral.

Sulphur 硫 *lieu*

Chlorine 氯 *lü* green OR 綠氣 *lü - chi* green - gas

Note the composite nature of the first alternative.

Potassium 鉀 *chia.* Note the left hand portion for metal. It is the counterpart of English *-ium* or *-um.* It is not pronounced.

Iron 鐵 *tieh*

Copper 銅 *t'ung*

Arsenic 砷 *shen.* Note the left hand ' stone ' radical.

Bromine 溴 *hsin.* bad smell — The right hand portion 臭 stands for water or liquid.

Zirconium 鋯 *kau*

Silver 銀 *yin*

Antimony 銻 *t'i.* Note the left hand portion for metal in the preceding two elements also.

Iodine 碘 *tien*

Gold 金 *chin*

Mercury	汞 *kung* OR 水銀	*shui - ying* water - silver
Lead	鉛	*ch'ien*
Radon	氡	*tung*. Note the right hand portion for gas.
Curium	鋦	*chü*
Ozone	臭氧	*hsin - yang* bad-smell - oxygen
radical	基	*chi* base, foundation
-ic	某基	*mou - chi* not-fixed - radical a certain
valence	化合價 (原子價)	*hua-ho - chia* (*yuan-tzu - chia*) compound - value (atom - value)
ferric chloride ($FeCl_3$)	氯化鐵	*lü - hua - tieh* chlorine - compound - iron
OR	三氯化鐵	*san - lü - hua - tieh* three - chlorine - compound - iron
ferrous chloride ($FeCl_2$)	氯化亞鉄	*lü - hua - ya - tieh* chlorine - compound - 2nd - iron
OR	二氯化鉄	*erh - lü - hua - tieh* two - chlorine - compound - iron
hydrogen peroxide	過氧化氫	*kuo - yang - hua - ch'ing* over - oxygen - compound - hydrogen
imino	亞銨	*ya - an* 2nd - ammonium
cyanide	氰	*ch'ing*. Note the right hand component for gas. blue gas
bromate	溴酸	*hsin - suan* bromine - acid

The first word *hsin* 溴 'bad smell liquid' has been given before.

Lü 氯 'chlorine' yields chlorite 亞氯酸 *ya - lü - suan*
2nd - chlorine - acid

hypochlorite 次氯酸 *tzu - lü - suan*
next - chlorine - acid

perchlorate 高氯酸 *kao - lü - suan*
high - chlorine - acid

isocyanide 異氰 *i - ching*
different - blue gas

orthocarbonate 原碳酸 *yüan - t'an - suan*
original - carbon - acid

nitroxyl 硝醯(基) *hsiao - hsi*
nitre - acyl

nitrosyl 亞硝醯 *ya - hsiao - hsi*
2nd - nitre - acyl

hydrocyanic acid 氫氰酸 *ch'ing - ching - suan*
hydrogen - blue gas - acid

metaphosphoric acid 二縮原磷酸 *erh - so - yuan - lin - suan*
two - shrink - origin - phosphorus - acid

OR 偏磷酸 *p'ien - lin - suan*
side - phosphorus - acid

diorthoperiodic acid ($H_{12}I_2O_{13}$) 二碘十三氧酸 *erh - tien - shih-san - yang - suan*
two - iodine - thirteen - oxygen - acid

OR 一縮二原高碘酸 *i - so - erh - yuan - kao - tien - suan*
one - shrink - two - origin - high - iodine - acid

paraperiodic acid 一縮原高碘酸 *i - so - yuan - kao - tien - suan*
one - shrink - origin - high - iodine - acid

OR 仲高碘酸 *chung - kao - tien - suan*
2nd - high - iodine - acid

mesoperiodic acid 二縮高原碘酸 *erh - so - kao - yuan - tien - suan*
two - shrink - high - origin - iodine - acid

OR 新高碘酸 *hsin - kao - tien - suan*
new - high - iodine - acid

pyrophosphodiamic acid 二氨(基)焦磷酸

erh - an (chi) - chiao - lin - suan
two - ammonium - (radical) - scorched - phosphorus - acid

carbonic anhydride 碳(酸)酐 *t'an - (suan) - kan*
carbon - (acid) - anhydride

OR 二氧化碳 *erh - yang - hua - t'an*
two - oxygen - compound - carbon

ferrous sulphate (正)硫酸亞鉄 *(cheng) liu - suan - ya - tieh*
(normal) sulphur - acid - 2nd - iron

disodium hydrogen phosphate 磷酸氫二鈉
lin - suan - ch'ing - erh - na
phosphorus - acid - hydrogen - two - sodium

OR 二代磷酸鈉 *erh - tai - lin - suan - na*
two - replace - phosphorus - acid - sodium

basic lead nitrate 氫氧化硝酸鹽
ch'ing - yang - hua - hsiao - suan - yen
hydrogen - oxygen - compound - niter - acid - salt

OR 鹼式硝酸鉛 *chien - shih - hsiao - suan - chien*
basic - type - niter - acid - lead

bell metal 鐘銅 *chung - tung*
bell - copper

ferroso-ferric oxide monohydrate 一水(合)四氧化三鉄
i - shui - (ho) - ssu - yang - hua - san - tieh
one - water - (combine) - four - oxygen - compound - three - iron

ferrous ammonium sulphate hexahydrate 六水(合)硫酸亞鉄銨
liu - shui - (ho) - lieu - suan - ya - tieh - an
six - water - (combine) - sulphur - acid - 2nd - iron - ammonium

ammonium iron alum 銨鉄礬 *an - tieh - fan*
ammonium - iron - alum

borane 硼烷 *p'eng - wan*
boron - alkane

diborane 乙硼烷 *i - p'eng - wan*
2nd - boron - alkane

alkane	烷(屬)烴	*wan* - (*shu*) - *t'ing*	alkane - (group) - hydrocarbon
alkene	烯(屬)烴	*hsi* - (*shu*) - *t'ing*	alkene - (group) - hydrocarbon
alkyne	炔(屬)烴	*chüeh* - (*shu*) - *t'ing*	alkyne - (group) - hydrocarbon
ethyl	乙基	*i* - *chi*	2nd kind - foundation (radical)
ethylidene	亞乙基	*ya* - *i* - *chi*	2nd - 2nd kind - alkane offspring
ethanoyl (acetyl)	乙醯基	*i* - *hsi* - *chi*	2nd kind - acyl - alkane offspring
ortho	隣(位)	*lin* - (*wei*)	neighbour - (position)
meta	間(位)	*chien* - (*wei*)	interval separated - (position)
para	對(位)	*tui* - (*wei*)	opposite - (position)
vicinal	連(位)	*lien* - (*wei*)	connected - (position)
symmetrical	對稱(位)	*tui-ch'eng* - (*wei*)	symmetrical - (position)
asymmetrical	偏(位)	*p'ien* - (*wei*)	not symmetrical - (position)
ana	跨(位)	*k'ua* - (*wei*)	top, over - (position)
amphi	遠(位)	*yüan* - (*wei*)	far off - (position)
peri	迫	*po*	near, pressing
cis	順	*shun*	to follow the order

trans 反 *fan* opposite, contrary

levo 左旋 *tso - hsiuan* left - revolving

dextro 右旋 *yu - hsiuan* right - revolving

glycerine 甘油 *kan - yu* sweet - oil

glycoside 甙 *tai* (the first component of the character means sweet)

OR 配醣物 *p'ei - t'ang - wu* to match - carbohydrate - thing

protein 朊 *yuan* origin of life OR 蛋白質 *tan - pai - chih* egg - white - material

enzyme 酶 *mei* liquor 'mei'

substrate 被作用物 *pei - tso-yung - wu* done by - function - thing

steroid 甾族化合物 *tsai - tsu - hua-ho-wu.* nucleus - group - compounds 巛 stands for 10, 13, 17 being substituted for carbon. 田 stands for four joined rings.

porphyrin 㗊族化合物 *lei - tsu - hua-ho-wu.* porphin - group - compounds 㗊 *lei* porphin (four nitrogens joined).

glucose 葡萄糖 *p'u-ta'o - t'ang* grapes - sugar

maltose 麥芽糖 *mai - yu - t'ang* wheat - bud - sugar; sprout

cellulose 纖維素 *hsien-wei - ssu* fibre - element

nucleoprotein 核朊 *hei - yuan* nucleus - protein

nicotine	菸鹼	*yen - chien* tobacco - alkaloid
amidase	醯胺酶	*hsi - an - mei* acyl - amine - enzyme
lactase	乳糖酶	*ju - t'ang - mei* milk - sugar - enzyme
progesterone	孕烯二酮	*yün - hsi - erh - t'ung* pregnant - alkene - two - ketone
hematoporphyrin	血㗊	*hsüeh - lei* blood - porphin
phylloporphyrin	葉㗊	*yeh - lei* leaf - porphin
hemin	氯化血㗊鉄	*lü - hua - hsüeh-lei - tieh* chlorine - combine - hemato-porphyrin - iron

---

saturated acyclic hydrocarbon	飽和鏈烴	*pao - ho - lien - t'ing* satiate - harmonious - chain - hydrocarbon saturated
ethene	乙烯	*i - hsi* 2nd - alkene
propyne	丙炔	*p'ing - chueh* 3rd - alkyne
homologue	同系物	*t'ung - hsi - wu* same - system - things
benzene	苯	*pen*
ethyl benzene	乙苯	*i - pen* 2nd - benzene
fused ring	稠環	*ch'ou - huan* dense - rings
naphthalene	萘 *nai* OR 并二苯	*ping - erh - pen* joint - two - benzene

anthracene 蒽 *en* OR 并三苯 *ping - san - pen* joint - three - benzene

---

ether 醚 *mi.* The second component 迷 of the character means 'bewitched, unconscious'.

aldehyde 醛 *ch'üan.* It is an ancient word, referring to the change of the taste of wine.

ketone 酮 *t'ung.* It is an ancient character, which is given a new meaning.

-one 某(級數)酮 *mon - (chi - shi) - t'ung* a certain - (grade - number) - ketone

carboxylic acid 羧酸 *suo - suan* carboxyl - acid

ester 酯 *chih*

organic salt 有機鹽 *yu - chi - yen* having - life - salt

carbohydrate 碳水化物 *t'an - shui - hua-wu* carbon - water - compound

monosaccharide 單醣 *tan - t'ang.* single - carbohydrate *t'ang* 醣 is adapted from the character 糖 'sugar'.

oligosaccharide 寡醣 *kua - t'ang* little - carbohydrate

polysaccharide 多醣 *tuo - t'ang* much - carbohydrate

aldose 醛醣 *chüan - t'ang* aldehyde - carbohydrate

ketose 酮醣 *t'ung* - *t'ang*
ketone - carbohydrate

sucrose 蔗糖 *che* - *t'ang*
sugar cane - sugar

raffinose 棉子糖 *mien* - *tzu* - *t'ang*
cotton - seed - sugar

starch 澱粉 *tien* - *fen*
sediment - powder

thionic acid 硫羰酸 *lieu* - *t'ang* - *suan.* The second character *t'ang* is a new
sulphur - carbonyl - acid

formation, being made up of the characters for oxygen and carbon.

thiolic acid 硫羥酸 *lieu* - *ch'iang* - *suan*
sulphur - hydroxyl - acid

ch'iang is a combination of the characters for oxygen and hydrogen.

thionothiolic acid 硫羥羰酸 *lieu* - *ch'iang* - *t'ang* - *suan*
sulphur - hydroxyl - carbonyl - acid

diphenyl thiol-carbonic ester 硫羥碳酸二苯酯

lieu - *ch'iang* - *t'an* - *suan* - *erh* - *pen* - *chih*
sulphur - hydroxyl - carbon - acid - two - benzene - ester

sulphonic acid 磺酸 *huang* - *suan*
sulphur - acid

sulphinic acid 亞磺酸 *ya* - *huang* - *suan*
2nd - sulphur - acid

amine 胺 flesh '*an*'

imine 亞胺 *ya* - *an*
2nd - an

hydrazine 肼 *ching*

hydrazone 腙 *tsung*

osazone 脎 *sa*

aldoxime 醛肟 *chuan - wo*
aldehyde - oxime

ketoxime 酮肟 *tung - wo*
ketone - oxime

hydroximic acid 羥肟酸 *ch'iang - wo - suan*
hydroxyl - oxime - acid

hydroxamic acid 異羥肟酸 *i - ch'iang - wo - suan*
different - hydroxyl - oxime - acid

nitrolic acid 硝肟酸 *hsia - wo - suan*
nitre - oxime - acid

nitrosolic acid 亞硝肟酸 *ya - hsia - wo - suan*
2nd - nitre - oxime - acid

amidoxime 胺肟 *an - wo*
amine - oxime

acid amide 醯胺 *hsi - an*
acyl - amine

acid imide 醯亞胺 *hsi - ya - an*
acyl - 2nd - amine

alkyl urea 烴基脲 *ch'iang - chi - niao.* *niao* 脲 combines the characters for
hydroxyl - radical - urea
flesh and urine.

ureide 醯脲 *hsi - niao*
acyl - urea

hydantoin 内醯脲 *ne - hsi - niao*
inside - acyl - urea

nitramine 硝胺 *hsiao - an*
nitre - amine

nitrosamine 亞硝胺 *ya - hsiao - an*
2nd - nitre - amine

nitrile 腈 *ch'ing*

cyanamide 氨腈 *an - ch'ing*
amine - nitrile

azo compound 偶氮化合物 *ou - tan - hua-ho-wu*
coupled - nitrogen - compound

diazo compound 重氮化合物 *ch'ung - t'an - hua-ho-wu*
double - nitrogen - compound

triazene 三氮烯 *san - tan - hsi*
three - nitrogen - alkene

tetrazene 四氮烯 *ssu - tan - hsi*
four - nitrogen - alkene

phosphine 膦 *lin.* Right portion of the character is the same as in phosphorus.

phosphonic acid 膦酸 *lin - suan*
phosphine - acid

phosphinic acid 次膦酸 *tz'u - lin - suan*
2nd - phosphine - acid

arsine 胂 OR 砷 *shen.* Right portion is the same as in arsenic.

CYTOLOGY

細胞學名詞

hsi - pao - hsueh - ming-tzu
small - embryo - science - terms
cell

It was published in March, 1953. It contains two thousand terms. We have selected as examples two series, one of cell, and the other of chiasma, on account of their simplicity.

cell 細胞 *hsi-pao*

cell, antipodal 反足細胞 *fan - tsu - hsi-pao*
opposite - foot - cell

cell, chromaffin cell, phaeochrome	嗜鉻細胞	*shih* - *ko* - *hsi-pao*	liking - chromium - cell
cell, daughter	子細胞	*tzu* - *hsi-pao*	son - cell
cell, enucleated	無核細胞	*wu* - *ho* - *hsi-pao*	without - nucleus - cell
OR	去核細胞	*ch'ü* - *ho* - *hsi-pao*	taken out - nucleus - cell
cell, free	游離細胞	*yu* - *li* - *hsi-pao*	wandering - separated - cell
cell, generative cell, germ cell, reproductive	生殖細胞	*sheng* - *chih* - *hsi-pao*	to give birth - to produce - cell
cell, intermitotic	分裂間期細胞	*fen* - *lieh* - *chien* - *ch'i* - *hsi-pao*	divide - split - separate - period - cell period in between
cell, mother	母細胞	*mu* - *hsi-pao*	mother - cell
cell, pollen mother	花粉母細胞	*hua* - *fen* - *mu* - *hsi-pao*	flower - powder - mother - cell
cell, postmitotic	分裂期後細胞	*fen-lieh* - *ch'i* - *hou* - *hsi-pao*	split - period - after - cell
cell, primordial germ	原生殖細胞	*yüan* - *sheng-chih* - *hsi-pao*	origin - generation - cell
cell, resting	靜止細胞	*ching* - *chih* - *hsi-pao*	silent - stop - cell
cell, sex	性細胞	*hsing* - *hsi-pao*. The early meaning of *hsing* was nature स्वभाव.	sex - cell
cell, somatic	体細胞	*t'i* - *hsi-pao*	body - cell
cell, vegetative	營養細胞	*ying* - *yang* - *hsi-pao*	to manage - to nourish - cell nourishing
chiasma	交叉	*chiao* - *ch'a*	to contact - a cross to cross

chiasma, compensating 補償交叉 *pu - ch'ang - chiao-ch'a*
to mend - to return - chiasma
compensate

chiasma, imperfect 不全交叉 *pu - chuen - chiao-ch'a*
not - perfect - chiasma

chiasma, interstitial 中間交叉 *chung-chien - chiao-ch'a*
in the middle of - chiasma

chiasma, lateral 側交叉 *tze - chiao-ch'a*
side - chiasma

chiasma, multiple 複交叉 *fu - chiao-ch'a*
duplicate - chiasma
multiple

chiasma, non-compensating 非補償交叉 *fei - pu-ch'ang - chiao-ch'a*
non - compensating - chiasma

chiasma, one plane theory of 單面交叉說 *tan - mien - chiao-ch'a - shuo*
single - side - chiasma - theory
front

chiasma, terminal 末端交叉 *mo - tuan - chiao-ch'a*
last - end - chiasma

* * *

PLANT PHYSIOLOGY

植物生理學名詞

chih-wu - sheng - li - hsueh - ming-tzu
plants - life - principle - science - terms
cause
physiology

It was issued in December 1953. It contains over 1800 terms. The book deserves translation in full.

oleic acid 油酸 *yu - suan*
oil - acid

olein	甘油三油酸酯	*kan-yu - san - yu-suan - chih.* glycerine - three - oleic acid - ester	The compound is rather too long.
osmometer	滲(透)壓計	*shun-(t'ou) - ya - chi* penetrate - pressure - meter	
osmosis	滲透(作用)	*shun-t'ou - (tso-yun)* penetrating - (function)	
osmotaxis	趨滲性	*chü - shun - hsing* turning - penetration - nature	
osmotic concentration	滲透濃度	*shun-t'ou - nung - tu* penetration - dense - degree	
osmotic pressure	滲透壓	*shun-t'ou - ya* penetration - pressure	
oxalic acid	乙二酸	*i - erh - suan* 2nd - two - acid	
	OR 草酸	*ts'ao - suan* grass - acid	
oxaloacetic acid	丁酮二酸	*ting - t'ung - erh - suan* 4th - ketone - two - acid	
oxalosuccinic acid	草醯丁二酸	*ts'ao - hsi - ting - erh - suan* grass - acyl - 4th - two - acid	
oxidant	氧化劑	*yang - hua - chi* oxygen - change - medicine oxidation	
oxidation	氧化(作用)	*yang-hua - (tso-yun)* oxidation - (function)	
oxidation-reduction potential	氧化還原電位	*yang-hua - huan-yuan - tien - wei* oxidation - to return - electric - place reduction potentiality	
oxido-reductase	氧化還原酶	*yang-hua - huan-yuan - mei* oxidation - reduction - enzyme

PLANT PATHOLOGY

植物病理學名詞

chih-wu - *ping* - *li* - *hsueh* - *ming-tzu*
plants - sickness - cause - science - terms
pathology

It was published in December, 1953. It contains a thousand words. Here we have selected a few.

Cercospora beticola 菾菜褐斑病 *t'ien* - *ts'ai* - *ho* - *pan* - *ping*
? - vegetable - brown - spot - disease

Cercospora nicotianae 菸草白斑病 *yen-ts'ao* - *pai* - *pan* - *ping*
tobacco - white - spot - disease

Colletotrichum destructivum 菸草炭疽病 *yen-ts'ao* - *t'an* - *chü* - *ping*
tobacco - coal, black - boil - disease
anthracnose

Colletotrichum falcatum 甘蔗赤腐病 *kan-che* - *ch'ih* - *fu* - *ping*
sugar-cane - red - rotten - disease

Colletotrichum hibisci 洋麻炭疽病 *yang* - *ma* - *t'an-chü-ping*
foreign - hemp - anthracnose
jute

Colletotrichum linicolum 亞麻炭疽病 *ya-ma* - *t'an-chü-ping*
a kind of jute - anthracnose

Corticium vagum Berk. et Curt. 菾菜絲核菌病 *t'ien-ts'ai* - *ssu* - *ho* - *chün* - *ping*
beet ? - silk - seed stone - germ - disease
a kind of bacteria

Corticium vagum Burt. et Curt. 洋麻立枯病 *yang* - *ma* - *li* - *k'u* - *ping*
foreign - jute - standing - wither - disease

Fusarium lini 亞麻萎蔫病 *ya-ma* - *wei-yen* - *ping*
a kind of jute - wither - disease

Fusarium spp., *Cephalothecium roseum* 棉鈴紅腐病
mien - *ling* - *hung* - *fu* - *ping*
cotton - bell - red - rotten - disease

* * *

MORPHOLOGY OF SPERMATOPHYTA

種子植物形態學名詞

chung-tzu - *chih-wu* - *hsing-t'ai* - *hsueh* - *ming-tzu*
seed - plants - form - science - terms.
spermatophyta morphology

It was published in October 1953. It contains over two thousand terms. Along with English are also given Latin terms. There is a special appendix for Russian.

kingdom 界 *chieh* field, boundary

division 門 *men* door, branch

class 綱 *kang* outline

subclass 亞綱 *ya* - *kang* 2nd - outline

order 目 *mu* item

suborder 亞目 *ya* - *mu* 2nd - item

family 科 *k'o* branch

subfamily 亞科 *ya* - *k'o* 2nd - branch

tribe 族 *tsu* clan

genus 屬 *shu* group

subgenus 亞屬 *ya* - *shu* 2nd - group

section 組 *tsu* section

species 種 *chung* kind, sort

subspecies	亞種	*ya - chung* 2nd - kind
variety	變種	*pien - chung* to change - species
form	變型	*pien - hsing* variated - type
herbarium 1.	植物標本室	*chih-wu - piao-pen - shih* plants - specimen - room
2.	蠟葉標本室	*la - yeh - piao-pen - shih* wax - leaf - specimen - room
herbarium sheet	蜡葉標本	*la - yeh - piao-pen* wax - leaf - specimen
hermaphrodite flower	兩性花	*liang - hsing - hua* both - sex - flower
hesperidium	柑果	*kan - kuo* orange - fruit
heterandrous	雄蕊異長的	*hsiün-jui - i - ch'ang - te* stamen - different - length - of
heteranthery	雄蕊異長	*hsiün-jui - i - ch'ang* stamen - different - length
heterogamous 1.	具異型花的	*chü - i - hsing - hua - te* contain - different - type - flower - of
2.	具異型配子的	*chü - i - hsing - p'ei-tzu - te* contain - different - type - gamete - of
heterogony	花蕊異長	*hua - jui - i - ch'ang.* *jui* denotes both pistil and stamen. flower - pistil OR stamen - different - length
heteromerous	異基數的	*i - chi - shu - te* different - basic - number - of
heteromorphic heteromorphous	異形的	*i - hsing - te.* Here *-ic* and *-ous* are of equal value. different - form - of
heterophyllous	具異形葉的	*chü - i - hsing - yeh - te.* *te* serves to turn the entire compound into an adjective. contain - different - form - leaf - of

heterophylly 異形葉性 *i - hsing - yeh - hsing*. Last *hsing* serves as an abstract noun signifier.
different - form - leaf - nature

heterosporous 具異形孢子的 *chü - i - hsing - pao-tzu - te*
contain - different - form - spore - of

heterostylic 花柱異長的 *hua - chu - i - ch'ang - te*
flower - pillar - different - length - of
style

heterostyly (same as before, but without *te*) *hua-chu - i - ch'ang*
style - different - length

An appendix to the above gives a table of **WEIGHTS AND MEASURES.**

millimicron 毫微米 *hao - wei - mi*
1/1000 - small - metre

micron 微米 *wei - mi*
small - metre

millimetre 毫米 *hao - mi*
milli - metre

centimetre 厘米 *li - mi*
1/100 - metre

decimetre 分米 *fen - mi*
1/10 - metre

metre 米 *mi* OR 公尺 *kung - ch'ih*
international - foot

decametre 十米 *shih - mi*
10 - metre

hectometre 百米 *pei - mi*
100 - metre

kilometre 千米 *ch'ien - mi*
1,000 - metre

OR 公里 *kung - li*
international - Chinese mile

millilitre	毫升	*hao - sheng* milli - litre
centilitre	厘升	*li - sheng*
decilitre	分升	*fen - sheng*
litre	升	*sheng*. It is originally an ancient Chinese measure.
decalitre	十升	*shih - sheng*
hectolitre	百升	*pai - sheng*
kilolitre	千升	*ch'ien - sheng*
microgram	微克	*wei - k'o* micro - gram
milligram	毫克	*hao - k'o*
centigram	厘克	*li - k'o*
decigram	分克	*fen - k'o*
gram	克	*k'o*
decagram	十克	*shih - k'o*
hectogram	百克	*pai - k'o*
kilogram	千克	*ch'ien - k'o* OR 公斤 *kung - chin* international - pound

PHYSICS

物理學名詞

wu - li - hsueh - ming-tzu
things - principle - science - terms
physics

It was published in October 1953. It is a big volume. It contains 16000 terms.

A.C. (alternating current) 交流[電] *chiao - liu - (tien)*
to cross - flow - (electricity)

A.C. circuit 交流電路 *chiao liu - tien - lu*
A.C. - electric - road

A.F.C. (automatic frequency control) 自動頻率控制
tzu - tung - p'in - lü - k'ung-chih - (tien - hsüün)
self - move - frequent - rate - control - (electricity - communication)
automatic frequency

A.V.C. (automatic volume control) 自動強度控制
tzu - tung - ch'iang - tu - k'ung-chih - (tien - hsüün)
automatic - power - degree - control - (electricity - communication)
volume

abampere 電磁系電流單位
tien - tz'u - hsi - tien - liu - tan - wei. (electro-
electricity - magnet - system - electricity - current - single - position
unit
magnetic unit of current)

abbertite 黑瀝青 *ho - li-ch'ing*
black - pitch

abohm 電磁系電阻單位
tien - tz'u - hsi - tien - tsu - tan-wei
electricity - magnet - system - electricity - resist - unit

carburetor 汽化器 *ch'i - hua - ch'i - (chi)*
vapor gas - to change - implement - (machine)

carburizing 碳化 *t'an - hua*
carbon - to convert

carnotite	釩酸鉀鈾礦	*fan - suan - chia - yu - k'uang*	vanadium - acid - sodium - uranium - mineral
Cartesian diver	浮沉子	*fou - ch'en - tzu*	floating - sinking - article
mev	兆電子伏[特]	*chao - tien-tzu - fu-(te)*	million - electron - volt
telemeter	1. 測遠計	*ts'e - yüan - chi*	survey - far - meter
	2. 遙測[電]計	*yao - ts'e - (tien) - chi*	far - survey - (electric) - meter
telephone	電話機	*tien - hua - chi (tien - hsiün)*	electricity - speech - machine (electricity - communication)
telephotography	1. 遠距照相術	*yüan - chü - chao - hsiang - shu*	long - distance - reflect - image - art
	2. 電傳相片術	*tien - chüan - hsiang - p'ien - shu*	electric - transmit - image - piece - art
telescope	望遠鏡	*wang - yüan - ching*	looking - far - glass
teleseism	遠震	*yüan - chen*	far - quiver
telestereoscope (relief telescope)	体視望遠鏡	*t'i - shih - wang - yüan - ching*	solid - see - looking - far - glass (solid - see: stereo; looking - far - glass: telescope)
telethermometer	遙測温度計	*yao - ts'e - wen - tu - chi*	far - survey - warm - degree - meter (warm - degree - meter: thermometer)
television	電視	*tien - shih*	electricity - observe
teletyper	打字電報機	*ta - tzu - tien - pao - chi*	strike - letters - electric - report - machine (strike - letters: typewriting; electric - report: telegram)

* * *

METEOROLOGY

氣象學名詞

ch'i - hsiang - hsueh - ming-tzu
air - phenomena - science - terms
meteorology

It was published in June 1954. It contains six thousand terms.

I. M. O. — International Meteorological Organization 國際氣象組織
kuo - chi - ch'i - hsiang - tsu - chi
nation - in the midst of - air - phenomena - to combine - to weave
international meteorology organisation

lysimeter 液度[估定]器 *i - tu - (ku-ting) - ch'i*
liquid - degree - (estimation) - implement

micro-climate 小氣候 *hsiao - ch'i - hou* small - air - weather climate OR 微氣候 *wei - ch'i-hou* small - climate

mile 英里 *ying - li* English - "Chinese mile" OR 哩 *li*

oasis 綠洲(沙漠中的) *lü - chou (sha-mo - chung - te)*
green - island (desert - in - of)

* * *

CONSTRUCTIONAL ENGINEERING

結構工程名詞

chieh - kou - kung - cheng - ming-tzu
to tie up - to construct - work - project - terms
construction engineering

It was published in March 1954. It contains over three thousand terms.

basalt 玄武岩 *hsüan - wu - yai*
blackish - marshal? - rock

cement 水泥 *shui - ni*
water - mud

concrete 混凝土 *hun* - *ning* - *tu*. Besides this compound a new character *t'ung* 砼 has been invented.
mixed - congealed - earth

crane 吊機 *tiao* - *chi*
lifting - machine

dolomite 白雲石 *pai* - *yun* - *shih*
white - cloud - stone

feldspar 長石 *ch'ang* - *shih*
long - stone

gneiss 片麻岩 *p'ien* - *ma* - *yai*
slice - pockmarked - rock

gypsite 土狀石膏 *t'u* - *chuang* - *shih-kao*
earth - state, condition - gypsum

gypsum 石膏 *shih* - *kao*
stone - grease

jack 頂重器 *ting* - *chung* - *ch'i*
to put on top, to lift - heavy thing - implement

OR 千斤頂 *chien* - *chin* - *ting*
1,000 - Chinese pound - lift

Lewis 吊楔 *tiao* - *hsieh*
hanging - wedge

Lewis bolt (stone-lifting bolt) 吊石楔 *tiao* - *shih* - *chüan*
lifting - stone - peg

puzzolana cement 火山灰水泥 *huo* - *shan* - *hui* - *shui-ni*
fire - hill - ash - cement
volcano

* * *

SURVEY

測量學名詞

ts'e - *liang* - *hsueh* - *ming-tzu*
to anticipate - to measure - science - terms
survy

It was published in February 1954. It contains four thousand terms. German terms have been put side by side with English and Chinese terms.

acre	英畝	*ying* - *mu* English - Chinese acre	
agate	瑪瑙	*ma* - *nau*	
atlas	輿圖	*yü* - *t'u* carriage - picture	
delta	三角洲	*san* - *chiao* - *chou* three - corner - island	
emery	金剛砂	*chin-kang* - *sha* diamond - sand	
fathom	海尺	*hai* - *chih* sea - scale, foot	
film	軟片	*jan* - *p'ien* soft - card, board	
inch	英寸	*ying* - *ts'un* English - Chinese inch	OR 吋 *ts'un*
offset printing process	橡皮印刷法	*hsiang-p'i* - *yin-shua* - *fa* rubber - printing - method	
T-square	丁字尺	*ting* - *tzu* - *chih* T - character - scale	
U-shaped valley	平底谷	*p'ing* - *ti* - *ku* level - bottom - valley	
voltage	電壓	*tien* - *ya* electricity - pressure	

RAILWAYS AND HIGHWAY ENGINEERING

鉄道與公路工程名詞

t'ieh - tao - yü-kung - lu - kung - cheng - ming-tzu
iron - road - public - road - work - plan - terms
railway highway engineering

It was published in April 1954. It contains eight thousand terms.

engine mile	機車哩	*chi - ch'e - li* machine - vehicle - mile engine
indicated horse-power	指示馬力	*chih - shih - ma - li* to point - to indicate - horse - power indicated
insurance	保險	*pao - hsien* protect - danger
locomotive	機車	*chi - ch'e* machine - vehicle
motor car	汽車	*ch'i - ch'e* gas - vehicle
motor cycle	機器脚踏車	*chi - ch'i - chiao - t'a - ch'e* machine - implement - foot - treading - vehicle machine cycle
motor truck	載重汽車	*tsai - chung - ch'i-ch'e* loading - heavy - motorcar
platform	1. 站台	*ch'an - t'ai* station - stage
	2. 月台	*yüeh - t'ai* (the popular term) moon-shaped - stage
	3. 平台	*p'ing - t'ai* level - stage
rail	軌條	*kuei - tiao* track - long piece, branch
	OR 鋼軌	*kang - kuei* steel - track
railroad	鉄道	*t'ieh - tao* iron - road
	OR 鉄路	*t'ieh - lu* iron - road

OR 電車道 *tien - ch'e - tao*
electric - vehicle - road
tram

railway route 鉄路路線 *t'ieh - lu - lu - hsien*
iron - road - road - line
railway route

railway track 鉄路軌道 *t'ieh - lu - kuei - tao*
iron - road - track - road
railway

taxicab 營業轎車 *ying - yeh - chiao - ch'e.* In Shanghai a
managing - business - sedan-chair - vehicle
taxicab is nicknamed "wild-chicken car". Wild-chicken refers to prostitutes.

taximeter 車費計 *ch'e - fei - chi*
vehicle - fee - meter

train 列車 *lieh - ch'e*
row - vehicle

train ticket 列車路票 *lieh - ch'e - lu - p'iao*
train road - ticket

tramway 電車道 *tien - ch'e - tao*
electric - vehicle - road
tram

tram-rail 電車軌條 *tien-ch'e - kuei-t'iao*
tram - rail

wye (=Y) 三角道 *san - chiao - tao*
three - corner - road
triangle

wye-track (Y-shaped track) 三角形軌道 *san - chiao - hsing - kuei tao*
three - corner - shape - track

X brace 交叉支撑 *chiao - ch'a - chih - ch'eng*
contact - cross - support - support
support

zeolite 沸石 *fei - shih*
boiled - stone

absolute galvanometer *Elec.* प्रकेवल धवाहमान
absolute geometry = hyperbolic geometry अधीन्द्र-रेखागणित (hyperbola अधीन्द्र)
absolute guaranty निरुपाधि प्रत्याभूति
absolute height *Phys.* निरपेक्ष उच्चत्व
absolute historigram *Statistics* निरपेक्ष कालिकचित्र
absolute humidity प्रकेवल आक्लेद, निरपेक्ष आक्लेद
absolute hypermetropia *Ophthalmol.* परम पश्चनाभिता
absolute impediment *Law* परम अवबाधा
absolute interest *Law* निरपेक्ष हित
absolute invariant *Math.* परम निश्चल
absolute law निरपेक्ष नियम
absolute liberty परम स्वाधीनता
absolute luminosity प्रकेवल चकासिता
absolutely *adv.* सर्वथा, नितान्त, परम, निरपेक्ष
absolutely clear सर्वथा स्पष्ट, नितान्त स्पष्ट
absolutely compulsory सर्वथा अनिवार्य
absolutely continuous function *Math.* सर्वथा संतत श्रित
absolutely convergent *Math.* सर्वथा-भिसारी
absolutely forbidden सर्वथा निषिद्ध
absolutely necessary परमावश्यक
absolutely requisite नितान्त आवश्यक
absolute magnitude 1 *Math.* (absolute value) निरपेक्ष अर्हा
2 *Astron.* प्रकेवल दीप्ति (brightness expressed in absolute units)
absolute majority सर्वथा बहुसंख्या

absolute majority of votes सर्वथा बहुमत
absolute maximum परम भूयिष्ठ, अधिकाधिकतम
absolute maximum price परमाधिक मूल्य
absolute measure of deviation निरपेक्ष विचलन-माप
absolute measure of skewness *Statistics* निरपेक्ष विषमता-माप
absolute minimum सर्वथा न्यूनतम, न्यूनातिन्यूनतम (as in: paper work must be reduced to absolute minimum)
absolute monarch परमैकराज, निरंकुश सम्राट्
absolute monopoly *Econ.* परम एकाधिकार
absolute motion *Phys.* निरपेक्ष गति
absolute music निरपेक्ष संगीत, शुद्ध संगीत
absolute necessity परम आवश्यकता, नितान्त आवश्यकता
absoluteness 1 (independence of everything extraneous) निरपेक्षत्व *n.*
2 (unlimitedness) असीमत्व *n.*
3 (absolute power) परम-शक्ति *f.*
4 (independent reality) निरपेक्षता *f.*
5 (positiveness) ध्रुवत्व *n.*
absolute number field असीम अंक-क्षेत्र
absolute occupancy *Law* परम अभिधारिता
absolute occupancy and occupancy tenants परम अभिधारिता और अभिधारिता भाटकी
absolute occupancy right परम अभिधारिता-अधिकार
absolute occupancy tenant परम अभिधारिता-भाटकी
absolute owner परम स्वामी
absolute ownership *Law* परम स्वामित्व
absolute parallax *Astron.* निरपेक्ष भेदाभास
absolute physical volume (of supply) निरपेक्ष भौतिक मात्रा
absolute pitch निरपेक्ष तारता
absolute position (position in absolute space) निरपेक्ष स्थिति
absolute power परम शक्ति, निरंकुश शक्ति
absolute pressure *Mech.* प्रकेवल निपीड
absolute priority परम पूर्वता
absolute proper motion *Astron.* निरपेक्ष सम्यग् गति
absolute property *Law* अबाधित संपत्ति
absolute punctuality सर्वथा समयपालन
absolute quartile deviation *Statistics* निरपेक्ष चतुर्थक विचलन
absolute requirement परमावश्यकता
absolute right *Law* पूर्णाधिकार, परम अधिकार
prerogative परमाधिकार
absolute rise (FAM. II. 676) प्रकेवल उद्रोह
absolute rule निरपवाद नियम, परम नियम
absolute sale पूर्ण विक्रय
absolute scale = Kelvin scale प्रकेवल श्रेणी
absolute sentences of imprisonment निरुपाधि कारावास-दण्डादेश
absolute space निरपेक्ष वरिमा
absolute specific gravity प्रकेवल आपेक्षिक भार, अनुशून्यक आपेक्षिक भार (referred to अनु a vacuum शून्यक)
absolute state ownership परम राज्य-स्वामित्व
absolute temperature (T, abs.) *Physical Chem.* प्रकेवल ताप (ता., प्रके.)
absolute tenure परम धारणाधिकार
absolute term 1 निरपेक्ष पद
2 = constant term *Alg.* अचल पद
absolute time 1 निरपेक्ष काल
2 *Astron.* (a single common standard of mean solar time) प्रमाप काल
absolute title *Law* परम स्वत्व, निरुपाधि स्वत्व
absolute unit प्रकेवल एकक
absolute unit of work *Math.* प्रकेवल कर्म-एकक
absolute value निरपेक्ष अर्हा, प्रकेवल अर्हा
absolute velocity *Phys.* निरपेक्ष प्रवेग
absolute veto परम अभिषेध
absolute viscosity = coefficient of viscosity आलगत्व-गुणक
absolute volt प्रकेवल द्युशक्म
absolute zero *Phys.* परम शून्य, प्रकेवल शून्य
absolution अपमोचन *n.*
1 (absolving from guilt, sin, penalty, etc.) अपमोचन *n.*, अपमुक्ति *f.*, दोषमुक्ति, दोषापमोचन, ऋणापमोचन, दण्डापमोचन, पापापमोचन *n.*
2 समापन *n.*, समाप्त करना
3 निष्पादन *n.*
4 क्षमण *n.*, क्षमा करना
5 मुक्त-उच्चारण, मुक्त-उदीरण, मुक्त-निर्णयन *n.*
absolutism 1 निरपेक्ष-वाद, परम-वाद *m.*

absorbancy प्रचूषत्व *n.*, प्रचूषिता *f.*
absorbed *adj.* 1 प्रचूषित
2 *Com.* संविलीन
3 मग्न, अन्तर्लीन
to be absorbed in increments वृद्धियों में संविलीन होना
absorbed ammonia प्रचूषित तिक्ताति
absorbed in meditation ध्यान-मग्न
absorbed in study अध्ययन-मग्न
absorbefacient *adj.* प्रचूषी (-इन्)
absorbefacient *n. Med.* (any agent promoting absorption) प्रचूषी (-इन्) *m.*
absorbency = absorbancy
absorbent *adj.* प्रचूषी (-इन्)
absorbent *n.* (a substance that absorbs) प्रचूष *m.*
absorbent cotton प्रचूषी तूल
absorbent cotton wool प्रचूषी व्रणतूल
absorbent gland *Anat.* प्रचूषी ग्रन्थि
absorbent ground *Paint.* प्रचूषी भूमि
absorbent lint *Pharm.* प्रचूषी तूलिपट
absorbent property प्रचूषण-गुण
absorbent screen = absorption screen
absorber 1 प्रचूषक *m.*, प्रचूषित्र, पुनर्जनित्र *n.* (regenerator)
2 *Paper Mfg.* प्रचूषक *m.*

fume absorber *Chem.* धूम-प्रचूषक
absorbing *adj.* प्रचूषी (-इन्)
absorbing *n.* प्रचूषण *n.*
absorbing banking company अन्तर्लायी अधिकोषण-समवाय
absorbing hairs प्रचूषी रोम
absorbing organ *Bot.* प्रचूषी अंग
absorbing root *Bot.* प्रचूषी मूल
absorbing surface प्रचूषी तल
absorbing well *Civil Engin.* प्रचूषी कूप
absorptance *Phys.* प्रचूषिता *f.*
transmittance पारेषिता
absorptio-meter *Phys.* प्रचूषण-मान *m.*
absorption 1 प्रचूषण *n.*
2 संविलयन *n.*
3 चित्ताधान *n.*
4 (of coins) अन्तर्लयन *n.*, अन्तर्लीन होना
absorption and return of currency चलार्थ का अन्तर्लयन और प्रत्यावर्तन
absorption apparatus प्रचूषण-सावित्र, प्रचूषित्र
absorption bands प्रचूषण-पट्टी
absorption blocks (compressed into cylindrical form) प्रचूषण-स्तम्भ
absorption bulb *Chem.* प्रचूषण-कन्द
absorption circuit *Radio* प्रचूषण-परिपथ
absorption coefficient प्रचूषण-गुणक
absorption current *Elec.* प्रचूषण-वाह
absorption dynamometer प्रचूषण-शक्तिमान
absorption factor *Optics* (coefficient of absorption) प्रचूषण-गुणक
absorption law = Draper law *Chem.* प्रचूषण-नियम
absorption lines *Phys.* प्रचूषण-रेखा
absorption mat *Chem.* प्रचूषण-कट
absorption of food (by plants) अन्न-प्रचूषण
absorption of light *Phys.* प्रकाश-प्रचूषण
absorption of mind मनोयोग, ध्यान
absorption of money मुद्रा का अन्तर्लयन
absorption pipette *Chem.* प्रचूषण-नाडक
absorption pit (NCA. 88) प्रचूषण-गर्त
absorption screen = absorbent screen *Optics* प्रचूषण-काच
absorption spectrum *Phys.* प्रचूषण-रंगावलि
absorption system प्रचूषण-पद्धति
absorption terrace प्रचूषण-उत्तल
absorption tube *Chem.* प्रचूषण-नाल
absorption type terrace प्रचूषण प्रकार उत्तल

absorptive *adj.* प्रचूषी (-इन्)
absorptive influence प्रचूषी प्रभाव
absorptiveness प्रचूषिता *f.*
absorptive region *Bot.* प्रचूषी प्रदेश
absorptive root *Bot.* प्रचूषी मूल
absorptivity = absorptiveness
absque (without) बिना
abstain *vb.* परिवर्जन, न करना, परे रहना
abstain from attending a school पाठशाला से अनुपस्थित रहना
abstain from drink मदिरा से परे रहना, मदिरा न पीना, मदिरा-परिवर्जन
abstainer *adj.* परिवर्जक, पानवर्जक
abstaining *adj.* परिवर्जी (-इन्)
abstaining *n.* परिवर्जन *n.*
abstainment = abstention
A B station (aviation beacon station) वि.उ. स्थान (विमान-उज्ज्ञप्ति-स्थान)

  grant of antedate पूर्वतिथि देना
antedated *adj.* पूर्वदिनांकित, पूर्वतिथीय
  post-dated उत्तरदिनांकित, उत्तरतिथीय
antedated cheque पूर्वदिनांकित धनादेश
antediluvian *adj.* प्राक्कालीन, प्रलयपूर्व
Antedon *Zool.* पत्रतारा-प्रजाति
  A. bifida, A. rosacea (common feather-star—CNH. I.581) सामान्य-पत्रतारा
antelope हरिण *m.*
  deer मृग
Antelope (genus) एण-प्रजाति
  A. cervicarpa कृष्णसार एण
antelope rat हरिण-मूष, हरना मूस
ante mortem मृत्यु-पूर्व
ante-mortem inspection मृत्युपूर्व निरीक्षण
ante-mortem statement मृत्युपूर्व कथन
ante-natal *adj.* जन्मपूर्व

ante-natal card जन्मपूर्व पत्रक
ante-natal care जन्मपूर्व सावधानी
ante-natal chart जन्मपूर्व सारणी
ante-natal clinic जन्मपूर्व विरुजालय
ante-natal, infant and child care जन्मपूर्व, शिशु और बाल अवेक्षा
ante-natal period जन्मपूर्व काल
antenatus (child born before the marriage of its parents) विवाहपूर्वजात, कानीन
antenna 1 *Zool.* (organs of touch) स्पर्शसूत्र *n.*, सूंछ
2 *Radio* प्रातन्तु *m.* (wires तन्तु for transmission प्रदान and reception आदान)
aerial वायव्य *n.*
antenna and reflector *Radar* प्रातन्तु तथा प्रतिक्षेपक
antenna housing *Radar* प्रातन्तु-प्रावार
antennal spine *Zool.* स्पर्शसूत्र-शल्य
antennal sternum *Zool.* स्पर्शसूत्र-अधरपट्ट
Antennaria *Bot.* (a large genus of woolly or hoary herbs of the thistle family. Many species are called cat's-foot) विडालपदी-प्रजाति
A. alpina हिमालय-विडालपदी
A. dioica = cat'sfoot (Willis) सामान्य-विडालपदी
A. plantaginifolia स्निग्धजीरपर्ण-विडालपदी (*plantaginifolia* 'plantago-leaved'. स्निग्धजीर 'plantago')
antennary *adj.* स्पर्शसूत्र-
antennary artery *Zool.* स्पर्शसूत्र-रोहिणी
antennary foot *Zool.* स्पर्शसूत्र-पाद
antennary gland *Zool.* स्पर्शसूत्र-ग्रन्थि
antennary sclerite *Zool.* स्पर्शसूत्र-दृढक, स्पर्शसूत्रीय दृढक
antenna system *Radar* प्रातन्तु-संहति
antennular sternum *Zool.* स्पर्शसूत्रक-अधरपट्ट
antennule *Zool.* स्पर्शसूत्रक *n.*
ante-nuptial *adj.* विवाह-पूर्व
ante-nuptial settlements विवाहपूर्व व्यवस्था
ante-partum *adj.* प्रसव-पूर्व
antepartum haemorrhage प्रसवपूर्व रक्तस्राव
anterio-dorsal *adj. Zool.* अग्रोत्तर
anterior *adj.* 1 अग्र, उत्तर, पहले
2 *Anat., Bot., Zool.* अग्र
anterior abdominal vein अग्र उदर-सिरा
anterior adductor impression *Zool.* अग्र उपचालक-चिह्न
anterior basicranial fenestra = fenestra hypophysis अग्र आधारकर्पर गवाक्ष
anterior cardinals = anterior cardinal veins अग्र मुख्या
anterior cardinal sinus *Zool.* अग्र मुख्या-कोटर
anterior cervical ganglion *Zool.* अग्र ग्रीवा-प्रगण्ड
anterior chamber *Ophthalmol.* अग्र वेश्म
anterior choroid plexus अग्र झल्लरी-प्रतान
anterior colporrhaphy योन्यग्रसीवन
anterior commissure *Zool.* अग्र समामिल
anterior cornea अग्र स्वच्छा
anterior cornua अग्र शृंग
anterior development *Educ.* अग्र विकास
posterior development पश्च विकास
anterior diverticulum *Zool.* अग्र अन्धस्यून
anterior epigastric vein *Zool.* अग्रगामी उपरिजठर-सिरा
anterior fontanelle *Zool.* अग्र विवार
anterior intestinal portal *Zool.* अग्र आन्त्र-द्वार
anterior lobe of pituitary पोषाग्रपालि
anterior loop *Zool.* अग्र पाशी
anterior margin *Bot.* अग्र प्रान्त
anterior mesenteric artery *Zool.* अग्र अन्त्रयुज-रोहिणी
anterior nares अग्र नासाविवर
anterior peduncle *Zool.* अग्र वृन्त
anterior pituitary *Anat.* अग्र पोषग्रन्थि
anterior principal point *Ophthalmol.* अग्र प्रधान बिन्दु
anterior rectus अग्र ऋजुपेशी
anterior retractor *Zool.* अग्र प्रत्याकर्षक
anterior superior iliac spine अग्र उत्तर पृष्ठनितम्बास्थि-शल्य
anterior thoracic air-sac *Zool.* अग्र औरस वात-स्यून
anterior vena cava = superior vena cava = pre cava *Zool.* उत्तर महानीला (or when not blue महासिरा)
anterior wing *Zool.* अग्र पक्ष
antero-lateral *adj. Zool.* अग्र-पार्श्व
antero-median *adj. Zool.* अग्र-मध्य
antero-posterior *adj.* अग्र-पश्च
antero-posteriorly अग्र-पश्च, अग्र-पश्चतया
antero-posterior plane *Bot.* अग्र-पश्च तल
anteversion *Med.* पुरोवर्तन *n.*
ant heap = anthill
anthelmintic *adj. Med.* आन्त्रकृमिघ्न
anthelminticus *Bot. Tax.* कृमिघ्न
anthemidis flores = chamomile *Pharm.* कर्पूर-पुष्प *n.*
anthemis = chamomile कर्पूर-पुष्प *n.*
Anthemis *Bot.* (flowers have camphor odour) कर्पूरपुष्प-प्रजाति
A. arvensis (field camomile) क्षेत्र-कर्पूरपुष्प
A. cotula (mayweed) गन्धमादिनी कर्पूर-पुष्प (*for explanation see* mayweed)
A. gayana (a small tomentose herb —Basu) रोमी कर्पूरपुष्प
A. macedonica यवन-कर्पूरपुष्प
A. nobilis (chamomile, camphor plant) (flowers have camphor-like odour) सामान्य कर्पूरपुष्प
A. tinctoria (dyer's chamomile) रञ्जक-कर्पूरपुष्प
Anthenea *Zool.* पुष्पतारक-प्रजाति
anther *Bot.* परागाशय *m.*
Antheraea *Zool.* पट्टशलभ-प्रजाति
A. assama कामरूप-पट्टशलभ
A. paphia (tusser silk worm = mylitta) वन-पट्टशलभ (inhabits forests)
A. yamamai (Japanese oak वञ्जु silk worm) वञ्जु-पट्टशलभ
Anthericum *Bot.* (has small white flowers) सितसुम-प्रजाति (सित 'white' + सुम 'flower')
A. liliago [silvery (St. Bernard's) lily] रजतनलिनी सितसुम
A. liliastrum [star (St. Bruno's) lily] तारानलिनी सितसुम
A. ramosum प्रशाखी सितसुम
A. variegatum (*variegatum* 'variegated leaves') चित्रपर्ण सितसुम
A. yedoense [*yedoense* 'of Yeddo (in Japan)'] उदयवर्ष-सितसुम
antheridial cell *Bot.* पुंधानी-कोशा
antheridial wall *Bot.* पुंधानी-भित्ति
antheridiophore *Bot.* पुंधानीधर *m.*
antheridium *Bot.* पुंधानी *f.* (short for पुंजन्युधानी)
antherophore *Bot.* परागाशयधर *m.*
antherozoid = spermatozoid *Biol.* (a motile male gamete) चलपुंजन्यु *m.* (here anther is not परागाशय)

antherozoid mother cell *Bot.* चलपुंजन्यु-मातृ-कोशा

anthesis (Gk., 'bloom')1 (period of expansion in a flower) प्रफुल्लनावधि *m.* 2 (state of expansion in a flower) प्रफुल्लना *f.*

anthill वल्मीक, वम्रि-कूट *m.* (ancient word), बांबी

Anthipes *Aves* (fleshy white पाटल legs and feet अंघ्रि) पाटलांघ्रि-प्रजाति

Anthocephalus *Bot.* कदम्ब-प्रजाति

A. cadamba सामान्य कदम्ब (B.,N.,M. कदम्ब, Ben. Hin. Mar. कदम, Tam. कदम्बु, Tel. कदम्बे, Sinh. कदम्ब)

A. indicus = A. cadamba

Anthoceros *Bot.* (*antho-* + Gk. *keras* 'horn'; the horned liverwort: has horn-like capsule) शृंगप्रावर-प्रजाति

A. glandulosus ग्रन्थिल शृंगप्रावर

A. laevis मसृण शृंगप्रावर

Anthocerotaceae *Bot.* शृंगप्रावर-कुल *n.*

Anthocerotales *Bot.* शृंगप्रावर-गोत्र *n.*

Anthocincla *Aves* (feather at the side of the nape long and pointed शंकु, forming conspicuous aigrettes) शंकुकर्ण-प्रजाति

anthocyan *Col. Ind.* पुष्पश्याम *m.*

anthocyanidin *Biochem.* पुष्पश्यामिथि *f.*

anthocyanin *Biochem.* पुष्पश्यामि *f.*

anthocyanin pigment *Biochem.* पुष्पश्यामि रंगा

anthology of verses कवितावलि *f.* (ancient word)

Antholyza (*antho-* 'flower' + *lyssa* 'rage'—as its flower suggests a wild animal with open jaws) उज्जम्भपुष्प-प्रजाति

A. paniculata गुच्छ-उज्जम्भपुष्प

Anthomedusae *Zool.* पुष्पछत्रिक-अनुगण *m.*

Anthophora = Podalirius *Zool.*

A. stanfordiana (a mining bee) खनकरोमिमक्षी

Anthophoridae = Podaliriidae

anthophyllite (NL. *anthophyllum* 'clove', often clove-brown in colour) लवंगिज *m.* (लवंग clove, -इज for खनिज mineral)

anthos पुष्प *n.*

anthosine (Gk. *anthos* 'flower') *Col. Ind.* पुष्पी *f.*

anthosine violet *Col. Ind.* पुष्पी नीललोहित

Anthosoma *Zool.* (form of the body is much modified by the development of curious overlapping lobes —PH. I.431) पालिकाय-प्रजाति

Anthostema *Bot.* नालपरिपुष्प-प्रजाति (having a tubular perianth)

antho-xanthin *Biochem.* पुष्प-पीति *f.*

Anthoxanthum *Bot.* वसन्तघास-प्रजाति

A. odoratum (vernal grass) सामान्य वसन्तघास

Anthozoa (Gk. *antho-* पुष्प- + *-zoa* -जीव) *Zool.* पुष्पजीव-वर्ग *m.*

anthr., anthra- (denoting the presence of anthracene विक्षामेण्य nucleus) *Chem.* विक्ष-

anthra bordeaux *Col. Ind.* विक्ष कपिशक

anthracene (Gk. *anthrax* 'coal') *Chem.* विक्षामेण्य *n.* (विक्षाम 'a burnt out coal' is from शांखायन-श्रौतसूत्र)

a. acid black *Col. Ind.* विक्षामेण्य अम्ल काल

a. acid blue *Col. Ind.* विक्षामेण्य अम्ल नील

a. acid brown *Col. Ind.* विक्षामेण्य अम्ल बभ्रु

wind वात
anti-dermatitis प्रति-चर्मकोप
Antidesma *Bot.* अम्लपर्ण-प्रजाति (Cf. *khatua* in Madhya Pradesh for *A. diandra*)
A. alexiteria = A. zeylanicum
A. bunius (leaves acid—Basu) सामान्य अम्लपर्ण
A. diandrum द्विकेसर अम्लपर्ण (M.P. *khatua*)
A. zeylanicum सिंहल-अम्लपर्ण
antidiabetic principle प्रतिमधुमेह तत्त्व
anti-diaphoretic स्वेद-रोधक
anti-diastase *Chem.* प्रति-विभेद
anti-diphtherin प्रति-प्रबलाक्षि
anti-diphtheritic *adj.* प्रति-प्रबलासीय
antidotal, antidotary *adj.* प्रतिविषीय
antidotary = antidotal
antidote *n.* प्रतिविष *n.*
antidote *vb.* प्रतिविषीयण
antidotical = antidotal
anti-drink committee मद्यपान-निवारण-समिति
anti-drink work मद्यपान-निवारण-कार्य

antidromous *adj. Bot.* प्रतिमुख
anti-dumping प्रति-राशिपातन
antidumping duty प्रतिराशिपातन-शुल्क
antidumping legislation प्रतिराशिपातन-विधान
anti-dysentery serum आमातिसार-प्रतिलसी
anti-dysentery serum (Shiga) आमातिसार-प्रतिलसी (अ.आ.) (अ. आ. short for अचलाणु shigella)
anti-dysentery vaccine आमातिसार-रक्षाणुलस
anti-emetic *n.* प्रति-वामक, वमन-रोधक *m.*
anti-endotoxin *Chem.* प्रत्यन्तर्विषि *f.*
anti-enzyme *Zool.* प्रति-विकर
anti-epidemic *adj.* प्रति-व्यापकरोग, व्यापकरोग-रोधी
anti-epidemic measures व्यापकरोग-प्रत्युपाय
anti-erosion society अपक्षरण-रोधी-समिति
anti-erosion works अपक्षरण-रोधी कर्मान्त
anti-filaria (plain, strong) *Bact.* प्रति-तन्तुसूत्र (अमिश्रित, प्रबल)
anti-fly campaign मक्षी-निवारण-आन्दोलन
anti-formin *Chem.* प्रति-वम्रि
anti-freeze प्रति-श्यान
anti-friction प्रति-संघर्ष
antifriction curve प्रतिसंघर्ष वक्र
antifriction metal प्रतिसंघर्ष धातु
antifriction wheels प्रतिसंघर्ष चक्र
anti-galactic *Chem.* प्रति-क्षीरिक
antigen (*anti*body + *gen*; see Oxford Dictionary Supplement) *Immunol.* प्रतिजन *m.*
antigen-antibody reaction प्रतिजन-प्रतिकाय-प्रतिक्रिया
antigenic *adj.* प्रतिजनिक
antigenicity प्रतिजनिकत्व *n.*
antigenic substance प्रतिजन-द्रव्य
antigenophil *adj.* प्रतिजनप्रिय
antigeno-therapy प्रतिजन-चिकित्सा
antigentophil = antigenophil
antigento-therapy = antigeno-therapy
antigen vial *Chem.* प्रतिजन-कूपिका
anti-glyoxalase *Chem.* प्रति-मतिस्वेद
Antigone *Aves* सारस-प्रजाति (सारस ancient word)
Antigonon *Bot.* (Gk. *anti-* 'like' + *gony* 'knee'—from kneelike stems) जानुस्तम्भ-प्रजाति
A. leptopus (mountain rose) तनुवृन्त जानुस्तम्भ (गिरि-पाटल)

antigorite (G e r m. *Blätterserpentin*—Hey's Index 14.4.12. A lamellar variety of serpentine) दलसर्पिज *m.* (-इज for खनिज mineral)
anti-government propaganda शासन-विरोधी प्रचार
anti-greyhair factor *Biochem.* प्रति-पलितकेश कारक
anti-haematinics प्रति-शोणितिक
anti-haemorrhagic vitamin प्रति-रक्तस्राव जीवति, रक्तस्रावरोधी जीवति
anti-hemoglobin *Chem.* प्रति-शोणवर्तुलि
anti-hemolysin *Chem.* प्रति-शोणांशि
anti-heterolysin *Chem.* प्रतीतरशोणांशि
anti-hoarding drive आसंचयरोधी आन्दोलन
anti-hoarding measure आसंचयन-प्रत्युपाय
anti-hookworm campaign अंकुशकृमिरोधी आन्दोलन
anti-hormone *Chem.* प्रति-न्यासर्ग
antihuman serum मनुष्य-प्रतिलसी
anti-infective *adj.* प्रति-सांक्रामिक
anti-inflationary measure स्फीति-प्रत्युपाय, स्फीतिरोधी उपाय
anti-inflationary policy स्फीतिरोधी नीति
anti-influenza vaccine प्रतिश्याय-रोगाणुलस
anti-isolysin *Chem.* प्रति-सशोणांशि
anti-kenotoxin *Chem.* प्रति-श्रमविषि
anti-knock *Chem.* (prevents detonation अधिस्फोटन) प्रतिस्फोट *m.*
anti-lactase *Chem.* प्रति-दुग्धेद
anti-larval measure डिम्भ-प्रत्युपाय
anti-leprosy work कुष्ठ-रोधी कार्य, कुष्ठ-प्रत्युपाय
anti-lipase *Chem.* प्रति-विमेदेद
Antilocapra *Zool.* (genus of prongbuck) शूलमृग-प्रजाति
Antilocapridae *Zool.* शूलमृग-वंश *m.*
anti-locust organization प्रतिशलभ-संघटन
antilog. (antilogarithm) प्रतिछे. (for प्रतिच्छेदा)
anti-logarithm *Math.* प्रति-च्छेदा *f.*
anti-luetic *adj. Med.* प्रत्युपदंशिक
antiluetin *Med.* प्रत्युपदंशि *f.*
anti-lysin *Biochem.* प्रति-व्यंशि
anti-lysis *Biochem.* प्रति-व्यंशन
anti-malarial *adj.* प्रति-हिमज्वर
anti-malarial chart प्रतिहिमज्वर रेखाचित्र

anti-malarial drug प्रतिहिमज्वर भेषज
anti-malarial measures हिमज्वर-प्रत्युपाय
anti-malarial works हिमज्वर-प्रत्युपाय, प्रतिहिमज्वर कर्मान्त
anti-malaria organization हिमज्वर-निवारण संघटन
anti-malaria supervisor प्रतिहिमज्वर पर्यवेक्षक
anti-malaria unit हिमज्वर-निवारक एकक
anti-malaria work हिमज्वर-निवारण-कार्य
anti-meningococcus serum मस्तिष्काणु-प्रतिलसी
antimere *Zool.* प्रतिखण्ड *m.*
antimode *Statistics* अल्पिष्ठक *n.*
antimonate *Chem.* अञ्जनीय *n.*
antimonial *n. Chem.* आञ्जन *m.*
antimonial *adj.* आञ्जन
antimonial lead = hard lead *Chem.* आञ्जन सीस = कठिन सीस
antimonial powder = pulvis antimonialis = James's powder *Pharm.* आञ्जन क्षोद
antimonial silver आञ्जन रजत
antimonial vermilion *Chem.* आञ्जन हिंगुल
antimonial wine = wine of antimony = vinum antimoniale *Pharm.* आञ्जन द्राक्षिरा
antimoniate = antimonate
antimoniated *adj. Chem.* 1 (combined with antimony) अञ्जन-युक्त
2 (prepared with antimony) अञ्जन-कृत
antimonic *adj. Chem.* अञ्जनिक
a. acid अञ्जनिक अम्ल
a. anhydride अञ्जनिक अजलेय
a. chloride अञ्जनिक नीरेय
a. oxide अञ्जनिक जारेय
antimonide *Chem.* अञ्जनेय *n.*
antimoniferous *adj. Chem.* (bearing antimony) अञ्जन-भर
antimonii oxidum अञ्जन-जारेय
antimonious *adj. Chem.* अञ्जन्य
a. acid अञ्जन्य अम्ल
a. anhydride अञ्जन्य अजलेय
a. chloride अञ्जन्य नीरेय
a. oxide अञ्जन्य जारेय
a. sulphide अञ्जन्य शुल्बेय
antimonite 1 *Chem.* अञ्जनित *m.*
2 *Mineral.* = stibnite अञ्जनिज *m.* (-इज from खनिज mineral)
antimonium = antimony अञ्जनातु *m.* = अञ्जन *n.*
antimonium sulphuratum = sulphurated antimony शुल्बारीयित अञ्जन
antimonium tartaratum = tartarated antimony न्यासत्रीयित अञ्जन
antimoniureted, antimoniuretted *adj. Chem.* अञ्जनेयित
antimoniureted hydrogen *Chem.* अञ्जनेयित उदजन
anti-monkey pellagra factor *Biochem.* प्रति-वानर वल्कचर्म कारक
antimon-silver *Mineral.* अञ्जन-रजत
antimony *Chem.* अञ्जन *n.*
a- antimony अ-अञ्जन
β- antimony आ-अञ्जन
a. arsenate अञ्जन नेपालीय
a. blende (German *blenden* 'to blind') *Mineral.* अञ्जनान्धन *m.*
a. bloom *Mineral.* अञ्जन-कुसुम
a., broken lump अञ्जन, खण्डित पिण्ड
a. bromide अञ्जन दुरेय
a. chloride अञ्जन नीरेय
a. cinnabar = antimony vermilion *Mineral.* अञ्जन हिंगुल
a. crude = antimony sulphide *Mining* अञ्जन शुल्बेय
a. fluoride (tri) अञ्जन तरस्वेय (त्रि)
a. fluoride mordant अञ्जन तरस्वेय स्थापक
a. glance *Mineral.* अञ्जन रुचा
a. hydride अञ्जन उदेय
a. iodide (tri) sublimed अञ्जन जम्बेय (त्रि) उत्सादित
a. ocher *Mineral.* अञ्जन गैरिक
a. orange *Col. Ind.* अञ्जन नारंग
a. oxalate अञ्जन तिग्मीय
a. oxide अञ्जन जारेय
a. oxide powder अञ्जन-जारेय-क्षोद
a. penta-chloride अञ्जन पञ्च-नीरेय
a. penta-sulphide अञ्जन पञ्च-शुल्बेय
a. pent-oxide अञ्जन पञ्च-जारेय
a. phosphate अञ्जन भास्वीय
a. potassium tartrate अञ्जन दहातु न्यासवीय
a. powder अञ्जन-क्षोद
a. red अञ्जन रक्त
a. regulus अञ्जन धातुकी
a. rubber अञ्जन घृषि
a. saffron = crocus of antimony अञ्जन कुंकुम
a. salt *Dyeing* अञ्जन लवण
a. sodium fluoride अञ्जन क्षारातु तरस्वेय
a. sodium tartrate अञ्जन क्षारातु न्यासवीय
a. sticks (technical or purified) अञ्जन-यष्टि (परिभाषित, पूत)
a. strontium tartrate अञ्जन शोणातु न्यासवीय
a. sulphate अञ्जन शुल्बीय
a. sulphide (black, orange) अञ्जन शुल्बेय (काल, नारंग)
a. sulphide (kermes mineral) अञ्जन शुल्बेय (कपिश खनिज)
a. sulphide (native antimonite) अञ्जन शुल्बेय (प्राकृत अञ्जनिज)
a. tetroxide अञ्जन चतुर्जारेय
a. trichloride अञ्जन त्रिनीरेय
a. trifluoride अञ्जन त्रितरस्वेय
a. trioxide अञ्जन त्रिजारेय
a. trisulphide अञ्जन त्रिशुल्बेय
a. vermilion *Col. Ind.* अञ्जन हिंगुल
a. white *Col. Ind.* अञ्जन श्वेत
a. yellow 1 *Col. Ind.* अञ्जन पीत

archoplasmic *adj.* तर्कुकर-
archoplasmic mass *Zool.* तर्कुकर-पुञ्ज
Archosauria *Paleontol.* आदिसरटाः *m.pl.*
arch over *vb.* ऊपर चाप बनाना
arch segmental (A. seg.) वृत्तखण्ड-चाप (वृ.चा.)
arch semicircular (A. sem.) अर्धवर्तुल चाप (अ.चा.)
arcicentrous *adj. Zool.* चापकीकसकाय
arc lamp *Elec.* चाप-दीप
arc lamp house चापदीप-धान
arc light projector चाप-प्रकाश-क्षेपित्र
A.R.C.M. (Assistant Registrar, Co-operative Marketing) स.प.स.वि. (सहायक पञ्जीकार, सहकारी विपणन)
arc method चाप-रीति
arc of circle *Phys.* वृत्त-चाप
arc of excess *Astron.* आधिक्य-चाप
arc of the hour-circle *Astron.* होरावृत्त-चाप
Arcot *Geog.* षडारण्य *n.*
arc Sin '*a*' *Math.* चाप ज्या 'अ'
arc spectrum चाप रंगावलि
arct- = arcto-
Arctic *n.* (Arctic Circle) उत्तरध्रुव-वृत्त *n.*
Arctic *adj.* उत्तरध्रुवीय, उत्तरध्रुव-
arctic circle उत्तरध्रुव-वृत्त, उत्तर-वृत्त
arctic climate उत्तरध्रुवीय जलवायु
arctic culture *Anthropol.* उत्तरध्रुवीय संस्कृति
arctic fox उत्तरध्रुव-लोमशी
arctic hare = polar hare उत्तरध्रुव-शश
arctician (one expert in knowledge or exploration of the arctic regions) उत्तरध्रुव-विज्ञ *m.*
arctico- उत्तरध्रुव-
arctic owl उत्तरध्रुव-उलूक
snow owl शीत-उलूक
arctic region उत्तरध्रुव-प्रदेश
Arctic soil उत्तरध्रुवीय मृदा
arctic tern उत्तरध्रुव-कुररी (कुररी ancient word)
arctic threetoed woodpecker उत्तरध्रुव-त्र्यंगुल-काष्ठकूट
Arctictis *Zool.* (Gk. *arktos* 'bear' ऋक्ष) ऋक्षपूतीक-प्रजाति
Arctic willow-warbler *Aves* उत्तरध्रुव-तरुकूजिनी
arctic wolf उत्तरध्रुव-वृक
Arctic zone उत्तरध्रुव-कटिबन्ध
Arctium *Bot.* (genus of burdocks) कण्टपीनाक्ष-प्रजाति
A. lappa = common burdock (distinguished by the bristly receptacle of the flower heads—Web.) सामान्य कण्टपीनाक्ष (पीनाक्ष receptacle)
arcto-, arct- 1 (bear) ऋक्ष-
2 (north) उत्तर
Arctocebus *Zool.* (Gk. *arktos* 'bear' + *kebos* 'monkey') ऋक्षकपि-प्रजाति
A. calabarensis सामान्य ऋक्षकपि
Arctocyon *Paleontol.* ऋक्षश्व-प्रजाति (Gk. *arktos.* 'bear', because they were bear- like—Lull p.552)
Arctocyonidae ऋक्षश्व-वंश *m.*
Arctocyonoidea ऋक्षश्वानः *m.pl.*
Arctogalidia *Zool.* हिमपूतीक-प्रजाति
Arctogalidiinae (subfamily) हिमपूतीकानुवंश *m.*
Arctogea *Biogeog.* (Gk. *arktos* 'north' + *gaia* 'land') उत्तर-भू *f.*
arctoid *adj.* भल्लूकाभ
Arctoidea भल्लूकानुगण *m.* (भल्लूक ancient word, अनुगण suborder)
Arctomyinae (subfamily) हिममूषानुवंश *m.*
Arctomys *Zool.* हिममूष-प्रजाति
Arctonyx *Zool.* कोलकोकड-प्रजाति
arctostaphylos = bearberry ऋक्षबदर *m.*
Arctostaphylos *Bot.* ऋक्षबदर-प्रजाति
A. officinalis भैषज्य ऋक्षबदर
A. uva-ursi (bear-berry) सामान्य ऋक्षबदर
Arctostylopidae *Zool.* (Gk. *arktos* 'north' + *Stylopidae* a family of minute parasitic insects) उत्तरलघुकवंश *m.* (*Cf.* Notostylopidae)
Arctotis *Bot.* (*arct-* 'ऋक्ष-' + Gk. *otos* 'ear' -कर्णी) ऋक्षकर्णी-प्रजाति
A. aspera (*aspera* 'rough'—the leaves) रूक्षपर्ण-ऋक्षकर्णी
A. breviscapa (*breviscapa* 'short-stalked' लघुवृन्त) लघुवृन्त-ऋक्षकर्णी
A. grandis महा-ऋक्षकर्णी
A. leptorhiza तनुमूल-ऋक्षकर्णी (*lepto-* तनु 'slender' + *-rhiza* मूल 'roots')
A. scapigera अपर्णवृन्त-ऋक्षकर्णी
arc trainer (it is a screen in the shape of an arc where a film of running tanks is shown to train students how to lay on tanks at different ranges and angles) चाप-प्रशिक्षक, चाप-शिक्षणपट *m.*
arc transmitter चाप-परेषित्र
arc-tube *Radar* चाप-नाल
Arcturus = α-Bootis *Astron.* स्वाति *f.*, प्रथम स्वातिक *n.*
arcuale *Zool.* (from it a vertebra is formed) कीकसजन *m.*
arcualia *pl. of* arcuale
arcuate *adj.* (curved like a bow) चाप-वक्र

arcuated *adj*. 1 = arcuate
2 *Arch*. (having arches) चापित
arcuate-decurrent *adj*. *Mycol*. (curved and extending down the stipe) वक्राधोगामी (-इन्)
arculite *Petrog*. (Lat. *arcus* 'bow'; a bow-shaped aggregate) चापाश्म *m*.
arcum oesophageal commissure *Zool*. निगल-समामिल-चाप
arcus tarseus *Ophthalmol*. वर्त्मपट्ट-धनु *n*.
arc-welding चाप-संधान
A.R.D. (Assistant Registrar, Development) स.प.वि. (सहायक पञ्जीकार, विकास)
Ardea *Aves* (a genus of herons) बक-प्रजाति
Ardeae = Herodii *Aves* बकानुगण *m*.
Ardeidae *Aves* (family of the herons) बक-वंश *m*.
ardella *Mycol*. (a small spotlike apothecium of Arthoniaceae) विवृतकायक *m*. (विवृतकाय apothecium)

Ardisia *Bot*. काकजम्बू-प्रजाति
A. colorata (drupe black—Basu) कृष्ण-काकजम्बू
A. crenata गोलच्छिन्न-काकजम्बू (गोलच्छिन्न crenate)
A. humilis सामान्य-काकजम्बू (MW. काकजम्बू)
arduous duty श्रमसाध्य कर्तव्य
arduous work श्रमसाध्य कार्य
area 1 क्षेत्र *n*. (Const.), प्रदेश *m*.
2 *Math*. क्षेत्र, क्षेत्रफल *n*.
3 (of scars) क्षेत्र *n*.
area and population क्षेत्रफल और जनसंख्या
area comb (BLR. III.13) क्षेत्र-छत्र
Area Commander क्षेत्र-समादेशक
area double-cropped द्विसस्य क्षेत्र
area held धृत क्षेत्र
area involved अन्तर्ग्रस्त क्षेत्र
area irrigated सिंचा हुआ क्षेत्र, सिक्त क्षेत्र
area irrigated by canals कुल्यासिक्त क्षेत्र, नहरों से सिंचा हुआ क्षेत्र
area irrigated by tanks तडागसिक्त क्षेत्र, तालाबों से सिंचा हुआ क्षेत्र
areal *adj*. क्षेत्र-, क्षेत्रीय, प्रदेश-, प्रदेशीय, क्षेत्रफलीय, क्षेत्रफल-
areal velocity *Astron*. क्षेत्रफल-प्रवेग
Arean *adj*. (pert. to Mars) मंगल-, मंगलीय
area of a tenth दशमांश का क्षेत्रफल
area of a whole wood समस्त जंगल का क्षेत्रफल
area of operation कार्य-क्षेत्र
area of shifting sand स्थानपरिवर्ती बालु का क्षेत्र
area of supply प्रदाय-क्षेत्र
area opaca *Embryol*. अपारदर्शी प्रदेश (अपारदर्शी opaque)
Area Organiser क्षेत्र-आयोजक
Area Organiser, Tribal Welfare क्षेत्र-आयोजक, वनजाति-कल्याण
area out of cultivation अकृषि-क्षेत्र, पड़त क्षेत्र
area pellucida *Embryol*. पारदर्शी प्रदेश (पारदर्शी pellucid)
area slip (RM. II.223) क्षेत्र-पर्णी
area sown बोया हुआ क्षेत्र
area specified निर्दिष्ट क्षेत्र
area statement क्षेत्र-विवरण
area striata *Zool*. रेखित प्रदेश
area transplanted प्रतिरोपित क्षेत्र
area under canopy *Forestry* वितान के नीचे का क्षेत्रफल, वितानगत क्षेत्रफल
area under crops सस्यगत क्षेत्र, सस्ययुक्त क्षेत्र
area under cultivation कृषिगत क्षेत्र
area under forest वनाच्छादित क्षेत्र
area under groves निकुञ्ज-क्षेत्र
area under irrigation सिक्त क्षेत्र, सिंचाई का क्षेत्र
area vasculosa *Zool*. वाहिनी-प्रदेश
area wall (the wall surrounding an areaway) अधोमार्ग-भित्ति
areaway (an open subsurface space, for affording access to a cellar) अधोमार्ग *m*.
area working plan *Forestry* क्षेत्र-प्रबन्धाधियोजना
Areca *Bot*. पूग-प्रजाति
A. catechu (areca nut palm, areca palm, betelnut palm, betel palm) सामान्य पूग (B.,M.,N. पूग)
A. dicksonii = Pinanga dicksonii
A. lutescens (*lutescens* 'becoming yellow' पीतायमान) पीतायमान पूग
A. nagensis (the nagas use it as a substitute for betel nuts—Basu) नाग-पूग
Arecaceae *Bot*. पूग-कुल *n*.
arecaceous *adj*. पूगकुलीय
arecaidine *Chem*. पूगेयी *f*.
arecaine *Chem*. पूगी *f*.
Arecales *Bot*. पूग-गोत्र *n*.
areca nut पूगफल *n*., सुपारी
areca nut palm = areca palm (*Areca catechu*) पूग-ताल, सुपारी का पेड़
areca palm = arecanut palm
arecolidine *Chem*. पूगवेयी *f*.
arecoline *Chem*. पूगवी *f*.
arecoline hydro-bromide *Chem*. पूगवी उद्-ब्रुरेय
arenaceous *adj*. 1 बालुमय, रेतीला
2 *Petrog*. सिकतामय (*see* rock)
3 *Bot*. (growing in sandy places) बालुरोही (-इन्), बालु में उगने वाला
arenaceous rock *Petrog*. सिकतामय शैल
Arenaria *Aves* (the turnstone keeps entirely to the sea-coast) बालुक-प्रजाति
Arenaria *Bot*. बालुक-प्रजाति
A. balearica (leaves tiny—Br. Fl. p. 322) लघुपर्ण बालुक
A. cherleria (tufted गुच्छिल alpine plant of Scotland—Willis p.53) गुच्छिल बालुक
A. ciliata (Irish sandwort) पक्ष्मल बालुक (पक्ष्मल *ciliata*)
A. gothica (much branched stems —Br. Fl. p.324) शाखितस्तम्भ बालुक
A. laricifolia श्रीदारुपर्ण बालुक (श्रीदारु 'larix, larch')
A. leptoclados तनुशाख बालुक
A. montana पर्वत-बालुक
A. norvegica (shoots and sepals glabrous—Br. Fl. p.324) चिक्कण बालुक
A. peploides = Honkenya peploides (seabeach sandwort) समुद्रतट-बालुक
A. purpurescens नीलारुण बालुक
A. serpyllifolia (thyme-leaved sandwort) पर्णासीपर्ण बालुक (पर्णासी thyme)
A. tetraquetra (*tetraquetra* 'four-angled'—the leaves in fours: PNS.) चतुष्पर्ण बालुक
A. verna वासन्त बालुक
arenarious = arenaceous
Arenga *Bot*. शर्कराताल-प्रजाति
A. obtusifolia (*obtuse* 'blunt') कुण्ठ-

पर्ण शर्करावाल

A. saccharifera (sugar palm, areng palm, gomuti palm, Malay sago palm, sago palm) सामान्य शर्करावाल

A. westerhoutii = A. obtusifolia

areng palm (*Arenga saccharifera*) शर्करा-ताल *m.*

Arenicola *Zool.* (genus of lugworms —they burrow in sandy beaches between tide-marks वेला) वेलाकृमि-प्रजाति

arenicolous *adj. Zool.* (inhabiting or burrowing in the sand) सिकतावासी (-इन्)

arenilitic *adj. Petrog.* (pert. to sandstone) वालुकाश्म-, वालुकाश्मीय

arenoid *adj.* (resembling sand) वालुकाभ

arenose *adj.* (sandy) वालुकीय, सैकत, रेतीला

arenosity वालुकीयता, सैकतता *f.*, रेतीलापन

areola 1 (an interstice) अन्तराल *n.*

2 (coloured ring around the nipple, or around a vesicle or pustule) वलय *m.*

3 (that portion of the iris which borders the pupil of the eye) तारा-वलय *m.*

areolae pl. of areola

areolar *adj.* अन्तरालित, वलयित

areolar tissue *Anat.* अन्तरालित ऊति

areolate, areolated *adj.* 1 (divided into or marked by areolae) अन्तरालित, वलयित, वलयांकित

2 *Bot.* सदेशक

areolation अन्तरालन, वलयन *n.*

areole 1 = areola

2 *Bot.* a (a small space) देशक *m.*

b (a small pit or cavity) कूपक *m.*

Arequipa *Bot.* = Echinocactus p.p. अरिकण्टाल-प्रजाति

A. leucotrichus सितरोम अरिकण्टाल

arete *Geog.* (fr. Lat. *arista* 'beard of grain' शूक) शूककूट *m.*

a retro ('in arrear, behind') पिछड़ा हुआ

arfvedsonite (=soda hornblende—Hey's Index) क्षारान्धनिज *m.* (-इज for खनिज mineral)

arg. (argentum) *Chem.* र (रजत)

argali (a colour, red-yellow रक्तपीत in hue, and of very low अप saturation) अपरक्तपीत

Arganosma *Bot.* वासन्ती-प्रजाति

A. calycina (it is a tonic—Basu) बल्य-वासन्ती

A. dichotoma सामान्य-वासन्ती (Basu वासन्ती)

argans (*Origanum vulgare*) मृदु-मरु *m.* (Tel. मृदुमरुवमु)

Argas *Zool.* मृदुवरूथि-प्रजाति

A. americanus, A. miniatus, A. persicus (adobe tick, blue bug, tampan) नीरु मृदुवरूथी

A. reflexus (found on pigeons) कपोत-मृदुवरूथी

argasid *n.* मृदुवरूथी (-इन्) *m.*

Argasidae *Zool.* मृदुवरूथि-वंश *m.*

Argemone *Bot.* शृगालकण्ट-प्रजाति

A. grandiflora महापुष्प शृगालकण्ट

A. mexicana (Mexican poppy, prickly poppy, yellow Mexican poppy) सामान्य शृगालकण्ट (B.,N.,M. शृगाल-कण्ट, Ben., Hin. *shialkanta*)

A. platyceras (*platyceras* 'having broad पृथु thorns शल्य') पृथुशल्य शृगाल-कण्ट

argemone oil शृगालकण्ट-तैल

argemony *n.* (a plant of the genus *Argemone*) शृगालकण्ट *m.*

argenol (*argentum* रूप्य + *-ol* -व, a silver-albumin combination) *Chem.* रूप्यव *m.*

argent रजत *n.*

argent *adj.* (made of silver; white) रजतमय, श्वेत

argent-, argento- *Chem.* रजत-

argental *adj.* 1 (of or pertaining to silver) राजत

2 (resembling silver) रजत-नीकाश

3 (containing or combined with silver) रजतयुक्त

argental mercury *Chem.* राजत पारद

argent-amide *Chem.* रजत-तिक्तेय

argent-amine *Chem.* रजत-तिक्ती

argentation (coating with silver) रजत-लेप *m.*

argentea *Zool.* (silvery layer) रजतस्तर *m.*

argenteous *adj.* (silvery) राजत, रजतमय

argenteus *Bot. Tax.* रजत-, राजत

argenti- = argento-

argentic *adj. Chem.* रजतिक

argenti-cyanide *Chem.* रजत-श्यामेय *n.*

argentide *Chem.* रजतेय *n.*

argentiferous *adj. Chem.* रजतप्रद, रजत-युत

argentiferous galena रजतयुत सीसरुचा

argentiferous gold = electrum राजत सुवर्ण

Argentina 1 *Zool.* चन्द्रशल्कि-प्रजाति (*see* argentine)

2 *Bot.* चन्द्रतृण-प्रजाति

argentine *n.* (any of various small silvery-scaled fishes) चन्द्रशल्की (-इन्) *m.* (Cf. चन्द्रक as the name of a fish in सुश्रुत)

argentine *adj.* 1 (pert. to silver) राजत

2 (resembling silver) रजतवत्

3 (silvery) रजतमय

Argentinidae *Zool.* चन्द्रशल्कि-वंश *m.*

argenti nitras रजत भूयीय

argenti-nitrate *Chem.* रजत-भूयीय

argent-ion *Chem.* रजतायन *n.* (रजत+अयन)

argentite *Mineral.* (native silver sulphide) रजतशिज *m.* (रजत silver, श-for शुल्बेय sulphide, -इज for खनिज mineral)

argento- रजत-

argentoid (an alloy of silver) रजत-मिश्रातु *m.*

argentol *Pharm.* रजतव *m.*

argento-meter *Chem.* रजत-मान *m.*

argento-metric *adj.* रजत-मितीय

argento-metry रजत-मिति *f.*

argenton रजता *f.*

argentoproteinum *Pharm.* (a compound of silver and protein) रजत-प्रोभूजिन *m.*

argento-pyrite *Mineral.* रजत-माक्षीक

argentose *Pharm.* (a compound of silver and a nucleo-protein; -ose is not from glucose) रजत्यक *m.*

argentous *adj. Chem.* रजत्य

argentum 1 *Chem.* रजत *n.*

2 रजत *n.*, चांदी

argentum album (silver coin) रजत-मुद्रा

argentum Dei (money given as earnest in making a bargain—Aiyar) सत्यंकार-राशि, साई (Mar. विसार)

Argesan River (in Afghanistan) *Geog.* महत्नु, मेहत्नु *f.* (from ऋग्वेद)

argillaceous *adj. Petrog.* मृन्मय (*see* rock)

argillaceous rock *Petrog.* मृन्मय शैल

argillous = argillaceous
arginase (transforms arginine to ornithine) आवैष्टेयेद *m*.
arginine (*argen* tum + *-ine*; in allusion to the silver salts which were first discovered. It is a derivative of guanidine वैष्टेयी) *Biochem*. आवैष्टेयी *f*.
arginine-phosphoric acid *Biochem*. आवैष्टेयी-भास्विक अम्ल
Argiope = Cistella
Argo = Argo Navis, Ship Argo *Astron*. नौका *f*.
argol = crude tartar अपरिष्कृत न्यासव *m*.
argon *Chem*. (Gk. *argon* 'inactive', so named on account of its inertness) मन्दाति *m*.
argonaut *Zool*. मृदुनाविक *m*.
Argonauta *Zool*. (the only known species is the paper nautilus मृदुनाविक) मृदुनाविक-प्रजाति
A. argo सामान्य मृदुनाविक
Argo Navis = Argo *Astron*. नौका *f*.
α Argus Navis *or* Carinae = Canopus प्रथम नौका *f*., अगस्त्य *m*.
β Argus Navis *or* Carinae = Miaplacidus द्वितीय नौका *f*.
ζ Argus Navis *or* Puppis = Naos षष्ठ नौका *f*.
ι Argus Navis *or* Carinae = Aspidiske नवम नौका *f*.
κ Argus Navis *or* Velorum = Markeb दशम नौका *f*.
argue *vb*. 1 युक्ति देना, तर्क करना
2 *Law* उपपादन
argue and refute तर्क करना और निराकरण करना
arguendo *Law* उपपादन करते हुए, उपपादने
Argulus *Zool*. शफरयूका-प्रजाति (शफरयूका carp-louse)
argument 1 युक्ति *f*., प्रतर्क, तर्क *m*.
2 *Math*. = amplitude
3 *Math*. (that which fixes the direction of a complex quantity) नियन्ता (-तृ) *m*.
4 *Logic* युक्ति *f*.
argumental *adj*. युक्ति-विषयक, युक्ति-संबद्ध, युक्ति-युत
argument and argumentation युक्ति और उपपादन
argumentation 1 *Law* उपपादन *n*.
2 प्रतर्कना, युक्ति *f*.
argument from silence = ex silentio *Logic* (an argument from lack of reference to a thing, lack of proof, etc.) मौनमूला युक्ति, अभावमूला युक्ति
argument in circle चक्र-युक्ति
argumentum *Logic* युक्ति *f*.
argumentum ad baculum *Logic* मुष्ट्यन्ता युक्ति
argumentum ad hominem *Logic* व्यक्ति प्रति युक्ति
argumentum ad ignorantiam *Logic* अज्ञानं प्रति युक्ति
argumentum ad misericundiam *Logic* दैन्यमूला युक्ति
argumentum ad populum *Logic* लोकं प्रति युक्ति
argumentum ad verecundiam *Logic* आप्तं प्रति युक्ति
argus brown = cochin (a colour, red-yellow रक्तपीत in hue, and of low नि brilliance) निरक्तपीत
Argusianinae *Aves* चन्द्रपक्षानुवंश *m*.
Argusianus *Aves* चन्द्रपक्ष-प्रजाति
Argus Navis *see* Argo Navis
Argus pheasant *Aves* चन्द्रकी जीवक (Gk. *Argos*—a giant of vast strength, who had a hundred shining eyes; upon his death these eyes were placed by Juno on the tail of a peacock; Prakrit जीवक is short for Sanskrit जीव-जीवक)
Argya *Aves* (they are very noisy) खरशब्द-प्रजाति
Argyle apple = Eucalyptus cinerea
Argyreia *Bot*. समुद्रशोष-प्रजाति
A. fulgens (leaves densely silky—Basu) रोमिपर्ण समुद्रशोष
A. sericea (densely covered with hair—Graham) रोमश समुद्रशोष
A. speciosa (elephant creeper) सामान्य समुद्रशोष (Basu समुद्रशोष, Kan. समुद्रसोग, Guj. समुद्रसोष, Hin. Mar. समुद्रसोख, Mal. समुद्रस्तोकम्, Tam. *samudrochogi*)
Argyroderma *Bot*. (Gk. *argyros* 'silver' चन्द्र [cf. Hindi चांदी] + *derma* 'skin' त्वक्—referring to the silvery deposit on the skin: PNS.) चन्द्रत्वक्-प्रजाति
A. testiculare साकन्दिक चन्द्रत्वक्
argyrodite (a silver sulpho-germanite) रशिशिज *m*. (र- for रजत silver, शि- for सिकातु germanium, श- for शुल्वारि sulphur, -इज for खनिज mineral)
argyrol *Pharm*. (preparation of silver vitellin) रजतपीति *f*.
Arhynchobdellae *Zool*. (order) अशुण्डौका-गण *m*.
A.R.I. (Additional Revenue Inspector) अ.रा.नि. (अपर राजस्व-निरीक्षक)
A.R.I. (Army Regulations, India) भा. से.वि. (भारतीय सेना-विनियम)
aricine *Chem*. (found in cusco bark, a variety of cinchona bark) प्रवितापी *f*.
arid *adj*. निर्जल, शुष्क, सूखा
dry शुष्क, सूखा
desiccated विशुष्क
arid and dry निर्जल और शुष्क
arid climate शुष्क जलवायु, सूखी जलवायु
arid cycle शुष्क चक्र
Arided = αCygni *Astron*. प्रथम राजहंस *m*.
arid hillsides शुष्क गिरिपार्श्व
arid soil शुष्क मृदा
ariegite *Petrog*. (a granular कण- pyroxenite समसैकिजाइम) कणसैकाइम *m*.
Aries = Ram *Astron*. मेष *m*.
α Arietis = El Nath = Hamal प्रथम मेष *m*., भरणी *f*.
β Arietis = Sheratan द्वितीय मेष *m*., अश्विनी *f*.
γ Arietis = Mesartim तृतीय मेष *m*.
δ Arietis = Botein चतुर्थ मेष *m*.
Arietid *Astron*. मेष-उल्का *f*.
Arietites *Paleontol*. (whorls numerous —Woods p.329) पुरुभ्रम्यइन-प्रजाति (पुरु numerous, भ्रमि whorls, -अइन -ites)
A. bucklandi (shell discoidal) बिम्बाभ पुरुभ्रम्यइन
aril *Bot*. अधिचोल *m*.
ariled, arilled = arillate
ariliform *adj*. *Bot*. अधिचोल-रूप
arillary *adj*. *Bot*. अधिचोलीय, अधिचोल-
arillate *adj*. *Bot*. (having an aril) अधिचोलित
arilled = arillate
arilloid *adj*. अधिचोलाभ
arillus = aril
Ariocarpus *Bot*. (genus of spineless cacti) अपकण्टाल-प्रजाति
A. fissuratus = Anhalonium fissuratum
A. prismaticum सांक्षेत्रिक अपकण्टाल
A. retusa (*retusa* 'blunt' कुण्ठ) कुण्ठ

अपकण्टाल

a. bloom नेपाली-कुसुम
a. bromide नेपाली दुरेय
a. calciner नेपाली-निश्चूर्णक
a. chloride नेपाली नीरेय
a. distillation apparatus *Chem.* नेपाली-आसवन-साधित्र
a. disulphide नेपाली द्विशुल्बेय
a. estimation apparatus (distillation method) नेपाली-आगणन-साधित्र (आसवन-रीति)
a. hydride नेपाली उदेय
a. iodide नेपाली जम्बेय
a. magenta *Col. Ind.* नेपाली धूम्रली
a. mirror tube (bent, straight) नेपालिक दर्पण-नाल (नत, ऋजु)
a. orange नेपाली नारंग
a. ore नेपाली-अयस्क
a. oxide नेपाली जारेय
a. penta-sulphide नेपाली पञ्च-शुल्बेय
a. pent-oxide नेपाली पञ्च-जारेय
a. powder नेपाली-क्षोद
a. spray-bath नेपाली शीकर-स्नान
a. sulphide (precipitated) नेपाली-शुल्बेय (निस्सादित)
a. test strips नेपाली-परीक्षण-पट्टी
a. trichloride नेपाली त्रिनीरेय
a. trihydride नेपाली त्र्युदेय
a. trioxide नेपाली त्रिजारेय
a. trisulphide नेपाली त्रिशुल्बेय
a. tube नेपाली-नाल
a. yellow नेपाली पीत
arsenical *adj. Chem.* नैपालिक
arsenical *n.* (a preparation containing arsenic) नैपालिक *n.*
arsenical antimony नैपालिक अञ्जन
arsenical nickel *Mineral.* नैपालिक रूपक
arsenical poisoning नेपाली-विषायण
arsenical pyrite नैपालिक माक्षीक
arsenical solution = liquor arseni-

calis *Pharm.* नैपालिक विलयन
arsenical soot नैपालिक कज्जल
arsenical vapour नैपालिक बाष्प
arsenical weedkiller नैपालिक तृणकघ्न
arsenicate *vb. Chem.* नेपालीयन
1 (to combine with arsenic) नेपाली-योजन
2 (to treat with arsenic) नेपाली-साधन
3 (to mix with arsenic) नेपाली-मिश्रण
4 (to impregnate with arsenic) नेपाली-व्यापन
arsenic-fast = arsen-fast
arsenicize = arsenicate

art *adj.* कला-, कलात्मक
words of art (words used in a technical sense) पारिभाषिक शब्द
art. (artery) रो. (रोहिणी)
Art. (article) अनु. (अनुच्छेद)
Artabotrys *Bot.* हरचम्पक-प्रजाति
A. odoratissimus सामान्य हरचम्पक (Basu हरचम्पक)
A. suaveolens (leaves are used to prepare an aromatic infusion—Basu) सुवास हरचम्पक
Artamidae *Aves* तालनीड-वंश *m.*
Artamus *Aves* तालनीड-प्रजाति (constructs a nest नीड of rootfibre from coconut palms ताल; *Cf.* Bengali *tal chatak*)
Artanema *Bot.* कोकिलाक्ष-प्रजाति
A. sesamoides सामान्य कोकिलाक्ष (Basu कोकिलाक्ष)
art brown (reddish red-yellow पीतातिरक्त in hue, of low अव saturation and low नि brilliance) न्यवपीतातिरक्त
art canvas कला-गाढक
art card कला-पत्रक
art education कला-शिक्षण
Artemia *Zool.* (the brine-shrimps) लवणाम्बुचिंगट-प्रजाति
Artemisia *Bot.* कृमिद्रु-प्रजाति
A. abrotanum (southernwood) दक्षिण-कृमिद्रु
A. absinthium (wormwood, absinth, madderwort, mingwort, mugwort, old woman, warmot, wermuth, wormwood) सामान्य कृमिद्रु
A. alpina हिमालय-कृमिद्रु
A. annua (used in China, Indochina etc.—Basu) चीन-कृमिद्रु
A. arborescens (*arborescens* 'tree-like' वृक्षवत्) वृक्षवत् कृमिद्रु
A. borealis (*borealis* 'of the north' उदीच्य) उदीच्य कृमिद्रु
A. cana (*cana* 'hoary') पलित कृमिद्रु
A. dracunculus (little dragon, mugwort, tarragon) प्रनाग कृमिद्रु (Eng. *little dragon mugwort*, French and Dutch *dragon*)
A. frigida (*frigid* 'cold', i. e. frosty-looking तुहिनाभ. Frost तुहिन) तुहिनाभ कृमिद्रु
A. gnaphalioides ऊर्णिलाभ कृमिद्रु
A. gracilis सुतनु कृमिद्रु
A. lactiflora (*lactiflora* 'flowers milk white') दुग्धिलपुष्प कृमिद्रु
A. lanata ऊर्णी कृमिद्रु
A. ludoviciana = A. stelleriana
A. maderaspatana = Grangea maderaspatana
A. maritima (drooping sea wormwood, English sea wormwood, French sea wormwood, Levant sea wormwood, santonica, sea mugwort, sea wormwood, worm-

seed) खुरपुष्पिका कृमिद्रु (Basu खुर-पुष्पिका)

A. persica दमन कृमिद्रु (MW. दमन '*A. indica*', Mar. दवन, Guj. परदेशी दवनो)

A. pontica (*Pontus* 'Black Sea') कृष्णोदधि-कृमिद्रु

A. sacrorum (the plant is said to be given to horses in affectations of the head—Basu) अश्वरुजा-कृमिद्रु

A. scoparia (it is considered as a cure for pain in the ear—Basu) कर्णशूल-कृमिद्रु

A. sieversiana वनदमनक कृमिद्रु (Basu वनदमनक, Mar. रानदवन)

A. stellariana (beach wormwood) पुलिन-कृमिद्रु

A. sternutatoria = Centipeda orbicularis

A. tanacetifolia ('leaves like *Tanacetum*' छिन्नपर्णी-प्रजाति) छिन्नपर्ण कृमिद्रु

A. tridentata त्रिदन्तक कृमिद्रु

A. vulgaris (fleabane, Indian wormwood, motherwort, mugwort) नागदमनी कृमिद्रु (B.,M. नागदमनी)

artemisia green (yellowish-green हर्यापीत in hue, and of low अव saturation) अवहर्यापीत

arteri- = arterio-

arterial *adj*. रोहिणी-, रोहिणीय

arterial blood रोहिणी-रुधिर

venous blood नीला-रुधिर

arterial bulb = bulbus aortae महा-रोहिणी-कन्द

arterial clamp रोहिणी-संधर

arterial duct = ductus arteriosus

arterialization रोहिणीयन *n*.

arterialize *vb*. रोहिणीयन

arteriasis *Med*. (degeneration of the artery walls) रोहिणी-रुजा *f*., रोहिणी-ह्रास *m*.

arterin *Biochem*. रौहिणि *f*.

arterio-, arteri- रोहिणी-

arterio-capillary fibrosis रोहिणी-केशाल-तन्तुरुजा

arteriole रोहिणिका, धमनिका *f*.

arteriology (treats of arteries) रोहिणी-विज्ञान *n*.

arterio-sclerosis *Med*. रोहिणी-जारठ्य

arterio-sclerotic *adj*. रोहिणी-जरठ

arterious *adj*. (arterial) रोहिणी-, रोहिणीय

arterio-venous *adj*. नीला-रोहिणी-नीला-रोहिणीय

arterioversion *Surg*. (eversion of the arterial walls) रोहिणी-उद्वर्तन *n*.

arteritis रोहिणी-कोप *m*.

artery *n*. रोहिणी ('red one'), धमनी *f*. (as in frogs, where arteries are white and not red)

artery *vb*. रोहिणीयन

artery forceps रोहिणी-संदंशिका

artery of the heart = coronary artery हृद्रोहिणी *f*.

artesian spring *Geog*. उत्पीड-उत्स

artesian well (the water is forced upwards by hydrostatic pressure—Penguin Dict. of Geog., 1949, p. 14. The water pressure is so great as to force the water to the surface —Fay p.44a) उत्पीड-कूप

art gallery कला-दीर्घा (दीर्घा 'gallery', it is a long room), कला-शाला *f*.

art green (yellowish yellow-green हर्यतिपीत in hue, saturation and brilliance medium मध्य) मध्यहर्यतिपीत

art grey (blue-red नील-रक्त in hue, of very low अप saturation and high प्र brilliance) प्रापनीलरक्त

arthr-, arthro- (joint) सन्धि-

arthritic, arthritical *adj*. (of or pert. to arthritis) सन्धिकोप, सन्धिकोपीय

arthritical = arthritic

arthriticine = piperazine *Pharm*. मरिचाजीवी *f*.

arthritis *Med*. सन्धिकोप *m*.

arthritis deformans (deforming arthritis) विरूपी सन्धिकोप

arthro-, arthr- (joint) सन्धि-

arthrobranch = joint gill (PH.I.407) *Zool*. सन्धि-क्लोम *n*.

arthrobranchia = arthrobranch

Arthrodendron *Bot*. (complex medullary rays in the wood) संकिरणद्रुम-प्रजाति

arthrodia *Anat*. (a gliding joint; a diarthrosis......) प्रसरसन्धि *m*.

arthrodial joint = gliding joint *Anat*. प्रसर सन्धि

arthrodial membrane *Zool*. सन्धि-कला

Arthrodira *Paleontol*. (*arthro-* + Gk. *deire* 'neck') सन्धिग्रीवानुवर्ग *m*. (अनुवर्ग subclass)

Arthrogastra *Zool*. सन्धि-जठराः *m.pl*.

arthrogastran *n*., *adj*. सन्धिजठर

arthrogenous *adj*. (*arthrospore* + *-genous*) *Mycol*. सन्धिबीजाणुजन (सन्धि-बीजाणु arthrospore)

arthron *Anat*. (joint) सन्धि *m*.

arthropathy (any joint disease) सन्धि-रोग *m*.

arthroplasty सन्धि-घटना *f*.

arthropod *n*. सन्धिपाद *m*.

arthropod = arthropodous

Arthropoda *Zool*. सन्धिपादाः *m.pl*.

arthropodal, arthropodan = arthropodous

Arthropodium *Bot*. (Gk. *arthron* 'joint' सन्धि + *pous* 'foot' -पदी) सन्धिपदी-प्रजाति

A. cirrhatum अलकित-सन्धिपदी

A. paniculatum पुष्पगुच्छ-सन्धिपदी

arthropodous *adj*. सन्धिपादीय

arthropterous *adj*. *Zool*. (having jointed fin rays) संहित-पक्ष

arthrosia = arthritis

arthrosis *Anat*. (any articulation or suture uniting two bones) सन्धि *m*.

arthrospore *Bot*. सन्धि-बीजाणु *m*.

arthrosporic, arthrosporous *adj*. *Bot*. सन्धिबीजाणु-

arthrosterigma (*arthron* 'joint' + *sterigma*) *Mycol*. (septate tissue-like sterigma) सन्धि-कणीवृन्त *n*. (सन्धि joint, कणीवृन्त sterigma)

arthrostome *Zool*. (mouth of an arthropod) सन्धिमुख *n*. (short for सन्धिपादमुख)

arthrous *adj*. (arthral, jointed) सन्धि-, संहित

Arthrozoa *Zool*. सन्धिजीवाः *m.pl*.

arthrozoan *n*. सन्धिजीव *m*.

arthrozoan *adj*. सन्धिजीवीय

arthrozoic *adj*. सन्धिजीवीय

artichoke (*Cynara scolymus*) वज्रांगी *f*.

calm weather *Geog.* शान्त ऋतु
Caloenadinae *Aves* कण्ठकेशानुवंश *m.*
Caloenas *Aves* (the neck is furnished with long metallic hackles) कण्ठकेश-प्रजाति
calombo = **calumba**
calomel (mercurous chloride) पानीरेय *n.* (पा- for पारद mercurous + नीरेय chloride)
calomel electrode *Physical Chem.* पानीरेय विद्युद्द्वार
calomel electrode stand पानीरेय विद्युद्द्वार स्थाम
calomel ointment = **ointment of mercurous chloride** *Pharm.* पारद नीरेय अभ्यञ्जन
Calonyction *Bot.* चन्द्रकान्ति-प्रजाति
C. bonanox = **Ipomoea bonanox** (moon-flower) सामान्य चन्द्रकान्ति (Basu, Kan. चन्द्रकान्ति, Bombay चन्द्र-कान्ता)
Caloperdix *Aves* (it appears to frequent very dense humid jungle) वन-तित्तिर-प्रजाति
Calophyllum *Bot.* पुन्नाग-प्रजाति
C. apetalum (petals nil—Basu) अदल पुन्नाग
C. decipiens = **C. apetalum**
C. elatum (Malabar poon, poon tree, sirpoon tree) केरल-पुन्नाग (Mal. *malampunna*)
C. inophyllum (Alexandra laurel, Alexandrian laurel) सामान्य पुन्नाग (B.,N.,M. पुन्नाग, Ben. Mar. Tel. Uri. पुन्नाग, Tam. पुन्नागम्, Mal. *pouna*)
C. polyanthum पुरुपुष्प पुन्नाग
C. spectabile दर्शन्य पुन्नाग
C. tomentosum = **C. elatum**
C. wightianum = **C. apetalum**
calophyllus *Bot. Tax.* सुपर्ण
calorescence (heat rays absorbed and emitted as light rays) ऊष्मप्रकाशिता *f.*
calorescent *adj.* ऊष्मप्रकाशी (-इन्)
Calorhamphus *Aves* कालतुण्ड-प्रजाति
calori- उष-
caloric *n.* *Old Chem.* (the principle of heat) उषिक *n.*
caloric *adj.* (of or pertaining to caloric) उषिक, उषिकीय
caloric engine उषिक गन्त्र
caloric fluid *Phys.* उष-द्रव
caloricity (ability to develop and maintain animal heat) उषवत्ता *f.*
caloric paradox *Phys.* उषिक असह्रास
calorie, calory *Phys.* (a unit of heat) उष *m.*
calorifacient *adj.* *Physiol.* उषंकर
calorific, calorifical *adj.* 1 उषंकर
calorific rays उषंकर रश्मि

2 (of or pertaining to heat) उषिक
calorification (production of heat) उषकृति *f.*
calorific capacity *Phys.* उषंकरी धारिता
calorific power उषंकरी शक्ति
calorific rays उषंकर रश्मि
calorifics *Phys.* औषिकी *f.*
calorific value उषंकरी अर्हा
calorific wool *Pharm.* उषंकरी ऊर्णा
capsicum wool रक्तमरिच ऊर्णा
calorifier ओषक *m.*
calorify *vb.* (to render hot) ओषण
calorigenic *adj.* (generating heat) उषंजन
calori-meter *Phys.* उष-मान *m.*
calorimeter bomb = bomb calorimeter प्रस्फोट-उषमान
calorimetric, calorimetrical *adj.* (of or pertaining to calorimetry) उषमितीय
calorimetry *Phys.* उषमिति *f.*
calorisator ओषित्र *n.*
calorist उष-वादी (-इन्) *m.*
calorize *Metal.* (to treat by a process for coating metal, usually iron or steel, with aluminium by application of heat) ओषण (स्फटधातु-रोपण) *n.*
calorizer = calorisator
calory उष *m.*
Calosanthes indica = Oroxylum indicum *Bot.*
Calotes *Zool.* उद्यानगोधिका-प्रजाति
Calotropis *Bot.* अर्क-प्रजाति
C. **gigantea** सामान्य अर्क (B.,N.,M., Kan. अर्क, Hin. आक, Mar. आकडा, Guj. आकडो, Tel. अर्कमु, Tam. अर्कम्)
C. **procera** (young parts clothed with white cottony tomentum—Basu) श्वेत अर्क (B.,M. श्वेतार्क, Hin. श्वेत आक)
calotropis cortex अर्क-वल्क
calotte *Zool.* टोपिका *f.*
Caltha *Bot.* कच्छगेन्दुक-प्रजाति
C. **bisma = Aconitum palmatum**
C. **himalensis = C. palustris**
C. **palustris** (marsh marigold) सामान्य कच्छगेन्दुक
calthrop (*Tribulus terrestris*) गोक्षुर *m.* (B.,N.,M.), गोखरु
caltrop 1 चतुःशूल *n.* (from Bengali)

calx *Chem.* भस्मा *f.*
calycanthine *Chem.* शोणपुष्पी *f.*
Calycanthus *Bot.* (it has dark-red flowers—Web. s.v. strawberry shrub) शोणपुष्प-प्रजाति
C. **floridus** शोभा-शोणपुष्प
Calycopteris *Bot.* वरवल्ली-प्रजाति
C. **floribunda** सामान्य-वरवल्ली (Mal. वरवल्ली)
calyculus *Mycol.* (a cup-like or calyx-like structure at the base of the sporangium) आलवालिका *f.* (from आलवाल)
calymma *Zool.* (gelatinous protoplasm) श्लिषिरस *m.*
Calymmatotheca *Bot.* (Lat. *calymmata* from Gk. *kalyptein* 'to conceal' + *theca*) गुप्तप्रावर-प्रजाति
C. **hoeninghausi** (it has glandular spines) ग्रन्थिकण्ट गुप्तप्रावर
calypter = calyptra अधिवेष्ट *m.*
calypterate = calyptrate *adj.* (having a calyptra) अधिवेष्टित
calypteri-form = calyptri-form *adj.* अधिवेष्ट-रूप
Calyptoblastea *Zool.* संवृतकुड्मल-गण *m.*
Calyptomena *Aves* गुप्ततुण्ड-प्रजाति (the greater part of the bill itself is concealed by the feathers of the lores which are lengthened and directed forwards)
calyptra *Bot.* 1 (any caplike covering) अधिवेष्ट *m.*
2 (covering of the capsule) प्रावरवेष्ट *m.*
3 = rootcap मूल-गोप *m.*
calyptrate = calypterate
calyptriform = calypteriform
calyptrogen *Bot.* (in which the root-cap मूलगोप originates) मूलगोपजन *m.*
Calyssozoa = Endoprocta (the body is cup-shaped—PH. I.306) कटोरजीवाः *m.pl.*
Calystegia *Bot.* (often united to *Convolvulus* हरिणपदी-प्रजाति) मृगपद-प्रजाति
C. **sepium** (flowers are scentless) निर्गन्धपुष्प मृगपद
calyx 1 (K) *Bot.* पुष्पकोश *m.* (क) (*Cf.* पद्मकोश 'calyx of a lotus')
2 *Anat.* आलवाल *n.*
3 *Zool.* (cup) कटोर *m.*
calyx lobes पुष्पकोश-पालि
cam *Mach.* (used to give complicated and exactly timed movements) गाम *m.*
camarella = cabal
Cambarus *Zool.* (freshwater crayfishes) जलचिंगट-प्रजाति
camber 1 *Mach.* (slight convexity) आकुब्जता *f.*
2 *Surv.* कुब्जता *f.*
camber *vb. Mach.* (to give convexity to) आकुब्जन
cambered *adj. Mach.* आकुब्जित
cambered fink truss = French truss = Belgian truss *Rly.* आकुब्ज-युग्म-उद्ग्रन्थ
cambial (of or pert. to cambium) एधा-
cambial initials *Bot.* एधा-आद्यकोशा (McLean I.891)
cambial sheath *Bot.* एधा-आवरण
cambist 1 (a dealer in notes and bills of exchange) विपत्रव्यवसायी (-इन्) *m.*
2 (a person skilled in exchange) विनिमयविज्ञ *m.*
cambium 1 (exchange) विनिमय *m.*

Cambodia कम्बोज *m.*
camboge = gamboge (ultimately from Cambodia, Sanskrit कम्बोज) काम्बोज *m.*
cambogia = camboge
Cambrian age *or* **period** *Geol.* त्रिखण्ड-युग (characterized by Trilobites), हैमन्त युग (the Haimanta series of sedimentary rocks represent the Cambrian period in Northern India)
camel उष्ट्र *m.*, ऊंट
camel-cart ऊंट-गाड़ी

camel-driver ऊंटवाला, उष्ट्रचालक
camel hair = camel's hair
camel hair brush = camel's hair brush
camel hide उष्ट्र-खल्ल, ऊंट की खाल
camelia = aniline brown
Camelidae *Zool.* उष्ट्र-वंश *m.*
cameline *adj.* (camel-coloured) उष्ट्र-वर्ण
camellia (a colour, red रक्त in hue and of very high अधि saturation) अधिरक्त
Camellia *Bot.* चैन-प्रजाति
C. thea (tea plant, Assam tea, China tea, Indian tea, tea) सामान्य चैन
C. theifera = C. thea
camellin (found in tea seeds) चैनि *f.*
camel load उष्ट्र-भार
camel man उष्ट्र-वाहक, ऊंटवाला
Cameloidea (superfamily) उष्ट्र-महावंश *m.*
camelopard *Zool.* चित्रोष्ट्र *m.*
Camelopardalis, Camelopardalus = Giraffe *Astron.* उष्ट्र *m.*
Camelops *Zool.* उष्ट्राभ-प्रजाति
camel pelt उष्ट्राजिन
camel's-foot *Bot.* उष्ट्रपदी *f.*
camel's hair उष्ट्र-लोम, ऊंट के बाल
camel's-hair *adj.* उष्ट्रलोम, ऊंट के बालों का
camel's-hair brush उष्ट्रलोम-कूर्च, ऊंट के बालों की तूलिका
camel skin उष्ट्र-चर्म
camel's thistle (*Echinops echinatus*) *Bot.* उष्ट्रकण्ट
camel-track उष्ट्र-मार्ग, ऊंटों का मार्ग
Camelus *Zool.* उष्ट्र-प्रजाति
C. antiquus पुरातन उष्ट्र
C. bactrianus (it has two द्वि- humps ककुद्) द्विककुद् उष्ट्र
C. dromedarius (one एक hump ककुद् on the back) एकककुद् उष्ट्र
C. sivalensis (from the Siwalik formation of India) शिवालिक-उष्ट्र
cameo green (a colour, yellow-green पीतहरि in hue, of low अव saturation and high प्र brilliance) प्रावपीतहरि
camera 1 वेश्म *n.*, कमरा

cap-quartz *Mineral.* (made up of separable layers or caps) स्तर-स्फटिक
Capra *Zool.* छाग-प्रजाति
caprate *Chem.* नारिकेलीय *n.*
Caprella *Zool.* (the abdomen is quite vestigial—PH. I.440) क्षीणोदर-प्रजाति
capreolate *Bot.* (having tendrils or tendril-like structures) सञ्जनीमान् (सञ्ज़नी 'tendril')
capreolatus *Bot. Tax.* सञ्जनीमान्
C a p r i (a colour, bluish green-blue हर्यतिनील in hue, of high उद् saturation and low नि brilliance) न्युद्धर्यतिनील
Capria *Zool.* (has no tentacles) निरंगका-प्रजाति
Capri blue [from the Blue Grotto, *Capri*] नीलगुहा-नील, (blue नील in hue, of very high अधि saturation and low नि brilliance) न्यधिनील
capric acid *Chem.* नारिकेलिक अम्ल
Capricorn = Capricornus *Astron.* मकर *m.*
Capricornid *Astron.* मकर-उल्का *f.*
Capricornus = Capricorn *Astron.*
α^1 and α^2 Capricorni = Algedi
β Capricorni = Dabih द्वितीय मकर *m.*
γ Capricorni = Nashira तृतीय मकर *m.*
δ Capricorni = Deneb Algedi चतुर्थ मकर *m.*
Caprifoliaceae (Lat. *caper* 'goat' अज + *folium* 'leaf' पर्ण) *Bot.* अजपर्ण-कुल *n.*
Caprifolium *Bot.* अजपर्ण-प्रजाति
Capri green नीलगुहा-हरि
caprilic = caprylic
Caprimulgi *Aves* छिप्पिकानुगण *m.* (छिप्पिका ancient name. अनुगण suborder)
Caprimulgidae *Aves* छिप्पिका-वंश *m.*
Caprimulgiformes छिप्पिका-गण *m.* (गण order)
Caprimulgus *Aves* छिप्पिका-प्रजाति
caprin *Chem.* (any of the esters of glycerol and capric acid) नारिकेलि *f.*
caprine (α-aminocaproic acid) *Chem.* गव्यी *f.*
caprinic *adj.* नारिकेलियिक
capro- (caproic) *Chem.* गव्य-
capro-amide *Chem.* गव्य-तिक्तेय
caproate *Chem.* गव्यीय *n.*
caproic *adj. Chem.* (this acid is found in cow's milk also) गव्यिक
caproic acid *Chem.* गव्यिक अम्ल
***n*-caproic anhydride** ऋ-गव्यिक अजलेय
caproin (glyceryl caproate) *Chem.* गव्यि *f.*
caprokol (4 hexyl resorcinol) षड्यास *m.*
Capromys *Zool.* (Gk. *kapros* 'wild boar' वराह + *mys* 'mouse') वराहशश-प्रजाति (it is nearly as large as a rabbit)
caprone (*capric* + *-one*) नारिकेला *f.*
capronic = caproic
***n*-capro-nitrile** *Chem.* ऋ-गव्य-भूयिल
capronyl (*caprone* + *-yl*) *Chem.* नारिकेराल *n.*
Caprotti valve gear *Rly.* (essentially rotary cams) भ्रामिगाम कपाट-यन्त्र
caproyl (*capro-* + *-yl*) *Chem.* गव्यल *n.*
caproyl chloride गव्यल नीरेय
capryl (*capric* + *-yl*) *Chem.* नारिकेरल *n.*
capryl acetate नारिकेरल शुक्तीय
capryl alcohol नारिकेरल सुषव
capryl-amine नारिकेरल-तिक्ती
caprylate *Chem.* नारिकेरलीय *n.*
caprylene (*caprylic* + ethyl*ene*) *Chem.* नारिकेरलेन्य *n.*
caprylic *adj. Chem.* नारिकेरलिक
caprylic acid नारिकेरलिक अम्ल
caprylin *Chem.* नारिकेरलि *f.*
caprylone *Chem.* नारिकेरला *f.*
caprylyl *Chem.* नारिकेरलल *n.*
capsaicin (from *Capsicum*; the pungent principle of Cayenne pepper) *Chem.* रक्तमरिचि *f.*
Capsella = Bursa (Lat. *capsa* 'box') *Bot.* स्यूतशिम्ब-प्रजाति (from the shape

of the pod शिम्ब)
C. **bursa-pastoris** (clappede pouch, clapper pouch, lady's purse, pick purse, purse, shepherd's bag, shepherd's purse) सामान्य स्यूनशिम्ब
capsici fructus = capsicum
capsicin (from *Capsicum*; a highly pungent extract from Cayenne pepper) *Pharm.* रक्तकट्वि *f.*
Capsicum *Bot.* रक्तमरिच-प्रजाति
C. **annuum** = bird's eye chilli (it has a bitter sharp taste—Basu) कटुतिक्त रक्तमरिच
C. **frutescens** (red pepper, African chillies, Cayenne pepper, chillies, goat pepper, spur pepper) सामान्य रक्तमरिच (Hin. लालमिर्च, Ben. लालमरिच, Mar. Guj. मिर्ची)
C. **minimum** (bird's-eye chilli, bird's-eye pepper) लघु रक्तमरिच
capsicum (the dried ripe fruit of *Capsicum frutescens*) = capsici fructus = capsicum fruit *Pharm.* रक्तमरिच *n.*
capsicum wool *Pharm.* रक्तमरिच-ऊर्णा
capsize = overturn उलटना
capstan (winding drum) मुण्ड, बन्ध-मुण्ड *n.*
capstan-headed screw मुण्ड-भ्रमि
capsul- प्रावर-
capsular *adj.* 1 प्रावरीय
2 प्रावर-सदृश
3 = capsulate
4 *Bot.* बहुबीजस्फोटी (-इन्)
capsular fruit *Bot.* (dry dehiscent, many-seeded) बहुबीजस्फोटी फल
capsulate *adj.* (enclosed in a capsule) प्रावृत
capsule *n.* 1 प्रावर *m.*
2 *Bot.* प्रावर *m.*
seta दण्डी, दण्डरोम
foot पाद
3 *Chem.* प्रावर *m.*
nickel capsule रूपक-प्रावर
regulator capsule नियामक प्रावर
silica capsule सैकजा-प्रावर
4 *Med., Phys.* प्रावर *m.*
capsule *vb.* (to furnish with, or enclose in, a capsule) प्रावर-रोपण, प्रावर-पूरण
capsule bacillus of Loeb = bacillus of Loeb
capsuled *adj.* प्रावृत
capsuled bottle प्रावृत कूपी
capsuler (one that puts on capsules) प्रावर-रोपक *m.*
capsule wall *Bot.* प्रावर-भित्ति
capsuli-, capsulo- प्रावर-
capsuling *n.* प्रावरण *n.*
capsulo- प्रावर-
capsulo-genous *adj.* प्रावर-जन
capsulogenous gland *Zool.* प्रावरजन ग्रन्थि
capsumin (*Capsicum* + *-in*; a red pigment in Guinea pepper) *Biochem.* मरिचरक्ति *f.*
captain 1 नायक, अधिपति *m.*
2 (Army) महाबलपति *m.*
3 (Royal Navy) महाधिपोतिक, महाधिनाविक *m.*
4 (of a merchant vessel) नावाध्यक्ष *m.*
commander समादेशक, सेनापति
colonel महाबलाधिपति
generalissimo सेनाधिपति
captain of industry उद्योगाधिपति, उद्योग-नायक
caption 1 (arrest by legal process) बन्दीकरण, विधिप्रग्रहण, विग्रग्रहण *n.*
2 (heading of a chapter, etc.) शीर्षक *n.*
3 (in motion pictures, a subtitle) अनु-शीर्षक *n.*
4 (title or heading of a legal document) शीर्षक *n.*
5 (a certificate attached to or written on a document stating when, where and by what authority it was taken, found or executed) शीर्षानुलेख *m.*
captivate *vb.* 1 बन्दी बनाना
2 मुग्ध करना, मोहित करना
captive *n.* बन्दी (-इन्), रणगृहीत *m.*
captivity (state of being a prisoner) बन्दि-अवस्था, बन्दिता *f.*
captor ग्रहीता (-तृ) *m.*
Captorhinomorpha (suborder) प्रदंशीसरटानुगण *m.*, प्रदंशीसरटाः *m.pl.*
Captorhinus *Paleontol.* (genus of the same suborder Captorhinomorpha as the genus *Labidosaurus* संदंशीसरट-प्रजाति) प्रदंशीसरट-प्रजाति
capture *vb.* परिग्रहण, बलाद्ग्रहण, बन्दीकरण, पकड़ना
capture *n.* 1 परिग्रहण, बलाद्ग्रहण (taking by force), बन्दीकरण *n.* (capture of an enemy), पकड़ना
2 *Geol.* = river-capture नदी-प्रग्रहण *n.*
captured animal परिगृहीत पशु
capturing licence परिग्रहण-अनुज्ञप्ति
capuchin *Zool.* (a monkey, *Cebus capuchinus*, with the hair on the crown reflexed and resembling a monk's cowl—Web.) भिक्षुकपि *m.*
capucine yellow (red-yellow रक्तपीत in hue, of high उद् saturation and high प्र brilliance) प्रोद्रक्तपीत
caput *Law* (legal status) वैध स्थिति *f.*
caput epididymis *Anat.* अधिकायमुण्ड *n.*
caput mortuum = iron red
capybara *Zool.* (largest existing rodent) कृन्तराज *m.*
car 1 (a vehicle moved on wheels—a carriage, cart, wagon, truck, etc.) यान *n.*, चक्री (-इन्) *m.*
2 (motor car) वहित्र, वहित्रयान *n.*
carrier वाहक
carriage वाहन
cart शकट, बैलगाड़ी
coach स्यन्दन
coach car स्यन्दन-यान
vehicle यान, वाहन
omnibus सर्वयान
motor वहित्र
motor car वहित्र-यान

Carabidae (Gk. *karabos* 'a horned शृंगी beetle भृंग') *Zool.* (a large family of beetle) शृंगिभृंग-वंश *m.*
Carabus *Zool.* शृंगिभृंग-प्रजाति
C. **auratus** स्वर्ण शृंगिभृंग
Caracal *Zool.* शशकर्ण-प्रजाति
caracal शशकर्ण *m.*
carafe कूपी, जल-कूपी *f.*
Carallia *Bot.* शिल्पद्रु-प्रजाति
C. **integerrima** = C. **lucida**
C. **lucida** (the wood is hard and very ornamental if cut radially. It is suitable for panelling, furniture, picture-frames and similar purposes—Tr.II.504) सामान्य शिल्पद्रु
Caralluma *Bot.* दुग्धिका-प्रजाति
C. **edulis** सामान्य-दुग्धिका (Basu दुग्धिका)
carambola apple (*Averrhoa carambola*) कर्मरंग *m.* (B.,K.,M)
caramel 1 (a substance obtained by heating sugar...used as colouring matter for food and beverages, etc.) रञ्ज-शार्कर *n.*
2 (a colour, red-yellow रक्तपीत in hue,

saturation and brilliance medium मध्य) मध्यरक्तपीत
Carandas = Carissa
carane (*car*one + *-ane*) *Chem.* प्राजीरीण्य *n.*
Carapa *Bot.* कटुशल्क-प्रजाति
C. moluccensis (the bark possesses extreme bitterness—Basu) सामान्य कटुशल्क
C. obovata (a small tree—Basu) लघु कटुशल्क
carapace *Zool.* (a shield covering the back or part of the back of an animal) पृष्ठवर्म *n.*, उत्कवच *m.* (upper shell)
Carara = Coronopus (wart cresses) *Bot.* (ill-smelling पूति herbs of the mustard सर्षप family) पूतिसर्षप-प्रजाति
carat 1 (3.086 grains troy) प्रगुञ्ज *m.* (२ यव = १ गुञ्ज)
2 (a proportion of gold) वर्ण *m.* (ancient word)
20 carat २० वर्ण
carate = pinto पृषच्चर्म *n.*
carat grain (½ of a carat) यवक *m.*
Carausius morosus *Zool.* सामान्य तृणकीट
caravalla seeds = Gynandropsis pentaphylla
caraway = carum *Pharm.* प्रजीर *m.*
caraway seed प्रजीर *m.*
caraway water = aqua carui *Pharm.* प्रजीर-वारि
carb-, carbo- *Chem.* (carbon, carbonic, carbonyl, carboxyl) प्रांग-
-carb-, -carbo- -अंगार-
carba = dry ice शुष्कहिम *n.*
carb-acido-meter प्रांगाम्ल-मान *m.*
carb-amate *Chem.* प्रांग-तिक्तीय
carb-amic *adj. Chem.* प्रांग-तिक्तेयिक
carb-amide प्रांग-तिक्तेय
carb-amido- *Chem.* (carbamide) प्रांग-तिक्तेय-
carb-amido *adj. Chem.* प्रांग-तिक्तेय, प्रांग-तिक्तेयक
carb-amine *Chem.* प्रांग-तिक्ती
carb-amine reaction = carbamino reaction
carb-amino *adj. Chem.* प्रांग-तिक्ती, प्रांग-तिक्तीक
carb-amino reaction *Biochem.* प्रांग-तिक्ती प्रतिक्रिया, प्रांग-तिक्तीक प्रतिक्रिया
carbamyl (*carbam*ic + *-yl*) *Chem.* प्रांग-तिक्तल *n.*
carb-anil (*carb*onyl + *anil*ine) *Chem.* प्रांग-नील
carb-anilic *adj. Chem.* प्रांग-नीलिक
carb-anilide *Chem.* प्रांग-नीलेय
carbazic *adj. Chem.* प्रांगाजीविक
carbazide *Chem.* प्रांग-जीवेय *n.*
carbazine *Chem.* प्रांगाजीवी *f.*
carbazole *Chem.* प्रांगाजवा *f.*
carbazole developer *Col. Ind.* प्रांगाजवा-विकासक
carbazole indo-phenol *Col. Ind.* प्रांगाजवा निनील-दर्शव
carbazol wool green *Col. Ind.* प्रांगाजव ऊर्णा हरि
carbazol yellow प्रांगाजव पीत
carbazotic acid *Col. Ind.* प्रांगाजीवातिक अम्ल
carbazylic *adj. Chem.* प्रांगाजीवलिक
carbene *Chem.* प्रांगेण्य *n.*
carb-eth-oxy- *Chem.* (carbethoxyl) प्रांग-द्-जार-
carb-eth-oxy *adj.* प्रांग-द्-जार
carb-eth-oxyl (*carb-oxyl* प्रांग-जारल with *ethyl* दग्धुउ inserted) *Chem.* प्रांग-द्-जारल
carbid = carbide
carbide *Chem.* प्रांगेय *n.*
carbide black *Col. Ind.* प्रांगेय काल
carbide dealer प्रांगेय-विक्रेता
carbide fast black *Col. Ind.* प्रांगेय स्थिर काल
carbide illumination प्रांगेय-प्रभासन
carbide of calcium चूर्णातु-प्रांगेय
carb-imide *Chem.* प्रांग-वितिक्तेय
carbinado = carbonado
carbine लघुनलिका *f.*
carbinol *Chem.* प्रांगिव *m.*
carbinol blue *Col. Ind.* प्रांगिव नील
carbinol fast green *Col. Ind.* प्रांगिव स्थिर हरि
carbinol violet *Chem.* प्रांगिव नीललोहित
carbinyl *Chem.* प्रांगिल *n.*
carbinyl chloride प्रांगिल नीरेय
carbo 1 *Pharm.* (charcoal) कृष्णांगार *m.*
2 (a carbonaceous residue from petroleum distillation; oil-retort carbon) प्रांग-किट्ट *n.*
carbo-, carb- *Chem.* प्रांग-
-carbo- -अंगार-
carboazotine *Chem.* प्रांगाजीवाली *f.*
carbocinchomeronic acid (*carbo-* प्रांग- + *cinchon*ine वितापी + Gk. *meros* 'part' अवयव) *Chem.* प्रांगतापयवयविक अम्ल

carbolic *adj. Chem.* प्रांगविक
carbolic acid प्रांगविक अम्ल
carbolic acid powder प्रांगविक अम्ल क्षोद
carbolic lotion प्रांगविक अवनेग
carbolic oil प्रांगविक तैल
carbolic wash प्रांगविक धावन
carbo ligni *Pharm.* (used as an absorbent) चूषांगार *m.*
carbolineate *vb.* (to treat or impregnate with carbolineum) विक्षामैलन, विक्षामैल-साधन, विक्षामैल-व्यापन
carbolineum (anthracene विक्षामेण्य oil तैल treated with zinc chloride...) विक्षामैल *n.*
carbolize *vb.* प्रांगवण
1 (to mix with carbolic acid or add carbolic acid to) प्रांगविक-अम्ल-मिश्रण
2 (to treat by the use of carbolic acid) प्रांगविक-अम्ल-साधन
carbolized antirabic vaccine प्रांगवित प्रति-आलर्क-रक्षाशुलस
carboloy (*carb*ide + *o* + all*oy*) प्रांग-मिश्रातु *m.* (मिश्रधातु)
carbol-uria प्रांगव-मेह *m.*
carbol-xylol (*carbol-* + *xyl*ene + *-ol*) प्रांगव-काष्ठव (प्रांगव- + काष्ठेन्य + -व)
carbo-methene *Chem.* प्रांग-प्रोदेन्व
carbo-methoxy- *Chem.* (carbo-methoxyl) प्रांग-प्रोद्जार-
carbo-methoxy *adj. Chem.* प्रांग-प्रोद्जार
carbon *adj.* 1 (of or pertaining to

carbon) प्रांगारिय
2 (resembling carbon) प्रांगार-सदृश
3 (treated with carbon) प्रांगार-साधित
carbon *vb.* प्रांगारण
1 (to become coated with carbon) प्रांगारित होना
2 (to deposit carbon upon cylinders) प्रांगार-रोपण, प्रांगार चढ़ाना
carbon *n.* 1 *Chem.* प्रांगार *m.*
